SPECIAL NOTICE ===== TO ===== **RETAIL DEALERS**

Our first steamers for the season 1923 have arrived from British Columbia and been discharged. We are now ready to accept orders for straight cars of fir timber or lumber, rough or dressed.

We are carrying a very large and complete stock of **timbers, planking and joists** as well as **casing, base, flooring, ceiling and finish in fir**. We can dress any size timber four sides up to and including 20" x 30". Now that there is such a tremendous amount of cargo business offering, the larger and better mills of British Columbia are not very much interested in sawing orders to specification. We have noticed that each year it is becoming more difficult to secure from British Columbia specified orders in anything like reasonable time. We are bringing our stock around in cargo lots and we are making a specialty of resawing and dressing timber, planking and joists to suit your specification. We also carry at our Montreal yard a large stock of **Quebec spruce lumber** and lath. We know that many of the smaller dealers will be glad to learn that they can now secure from us mixed cars of rough and dressed spruce and fir.

**We Solicit your enquiries for All Classes of
Quebec and British Columbia Forest Products**

WE HANDLE "THE BEST IN THE WEST"

Office and Yard: FT. SPADINA AVE., TORONTO

Important Announcement

A Shingle Nail is now being manufactured in Canada which should last the life of British Columbia Red Cedar Shingles.

This is a heavy gauge nail, has sharp point, wide head with thickened shank under, and is protected with a heavy coating of pure galvanized spelter applied by hot-dipped process.

Red Cedar Shingles applied with such nails assure a roof of lasting satisfaction.

Every lumberman could stock these nails to advantage. We will gladly send samples.

British Columbia Lumber Commissioner
51 Yonge St. Toronto

The Smile of Satisfaction

Know what real satisfaction means by giving McDonagh Lumber a trial. Wholesale Hardwoods (Native and Foreign), Crating Spruce, Pine and Hemlock, Canadian Birch, Basswood and Maple.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

And now—

"BIG CHIEF"

It has come into its own

NOT so many years ago West Coast Hemlock was practically unknown as a commercial asset.

To-day, the demand for it is Continent-wide

The rapid, but logical growth of this demand is conclusive evidence of its splendid qualities.

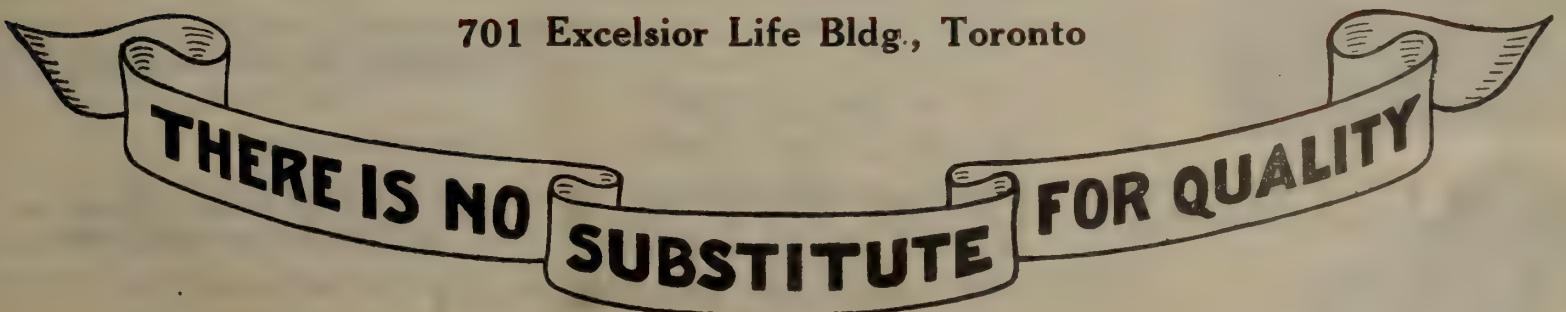

Written indelibly in the annals of the Lumber Industry, is the fact that "Big Chief" Brands have led all others in bringing it "into its own".

For we give it the same exacting and careful attention that is bestowed upon our Fir and Red Cedar Products.

VANCOUVER LUMBER CO.

Branch Sales Offices at Toronto, Ont., Winnipeg, Man., Chicago, Ill.

BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

The Only Living Commissioned Deal Culler in Quebec

Thomas Malone of Three Rivers, Comes of Family of Lumber Graders. His Grandfather away Back in 1845 Compiled Grading Rules for the Act Passed in that Year. Tells how Culler in Days Gone By Handled Each Piece of Lumber, Placing Red Chalk Mark on the Face and Stamp on the End. He was Under Heavy Penalty to Mark Correct Quality on Each Board.

Thomas Malone, Three Rivers, P.Q.

Thomas Malone, of Three Rivers, Que., is the only living commissioned deal culler, appointed under "An Act to regulate the culling and measurement of timber, masts, spars, deals, staves and other articles of a like nature, and to repeal a certain Act therein mentioned." The date of this Cullers' Act is March 1845, and it repeals a measure dealing with the same subject. It is an interesting fact that the greater part of the grading for the 1845 Act was compiled by the grandfather of Mr. Malone. A graphic description of the earlier days of the Quebec lumber trade, particularly in relation to the export side, as seen by Mr. Malone follows. The Cullers' Act dealt with culling for the U.K. market, and the grades had, of course, reference

to that trade. Conditions have now changed; methods of business have altered, transportation has been revolutionized, the lumber trade has broadened out in other directions, and Canada has no longer the supply of large lumber which she furnished the U.K. These changing conditions have resulted in the Cullers' Act being regarded as a dead letter. The men licensed under it have gradually died, Mr. Malone being the only link with that past.

Under the Act a Supervisor of Cullers was appointed, and he, with four members of the Council of the Quebec Board of Trade, practically acquainted with the lumber trade, and also four licensed cullers, constituted a Board of Examiners to appoint new cullers. The duties of culling and measurement were divided into four different departments:—culling and measurement of square timber; culling and measurement of staves; culling and measurement of masts, spars, bowsprits, oars and handspikes, and another for the culling and measurement of deals, boards, planks and lathwood. This, of course, takes us back to the days of sailing ships, and it will be quite apparent why the Act has in some respects, at least, served its purpose.

The oath taken by the culler has one or two points of interest. As an example, a culler swore,—“I will not, directly or indirectly, be a dealer in or interested in the buying or selling of any article of lumber either on my own account or on account of any other person whatsoever; and I will not at any time purloin or wilfully change or omit any article of lumber submitted to me for the purpose of being measured, counted or culled.”

The Act defined the grades of the following: Square oak, rock elm, square red, white or yellow pine, ash, basswood, birch, masts, bowsprits and red pine spars, lathwood, ash oars, pine or fir boards,

white or yellow pine deals, red pine deals, spruce deals; also the dimensions of merchantable timber, the standards of staves, etc.

The Supervisor of Culling charged a schedule of fees for the various classes of work, the cullers employed by the supervisor receiving a proportion of these fees. As an example, the cullers received for lumber measured off or counted off—hardwood two-pence per ton; deals counted off ninepence per standard hundred. For culling or measuring in a merchantable state, or measuring in shipping order, the charges were higher, deals costing two shillings per standard hundred.

What Cullers Received in Fees

A culler might be employed by a merchant as a shipping culler subject to certain regulations, the violation of which opened him to a penalty of one hundred pounds or six months' imprisonment. A culler was also liable to penalties in the event of refusal, neglect or delay in carrying out his duties. The Act is composed of 35 sections, dealing with the measurement and grading of lumber, duties of the cullers, penalties and safeguards for the shippers.

A return of pine deals, sawn for William Little at the Ross Ritchie mill, Three Rivers, in 1885, shows four qualities of pine, the lengths varying from 10 to 23 feet and the widths from 7 in. to 29 in. In writing on this subject, Mr. Malone remarks:—

“Note the difference in the specifications and the returns of today in both size and quantity. The logs those deals were sawn from were made on the Weseneau River, a tributary of the St. Maurice River. Today white pine is almost a thing of the past on the St. Maurice, and what little comes down to the mills, does not average 2% first quality or 9" in width, and the same is pretty nearly as bad in Ontario. I well remember in 1870 going up the Opiongo, Bonchere, Petawawa and Nippesing rivers; the whole country was covered with an ocean of pine; as far as the eye could reach from any prominent height nothing was to be seen but a mass of pine tops; in fact one would imagine that it all could never be cut or used up. Well, go over the same ground today and see what you will find, an almost barren desert as far as standing pine is concerned and the spruce is also steadily disappearing,—what with forest fire, and supplies for the paper and pulp mills. Another twenty years will see the end of it, unless forest fires are prevented or controlled, and intense reforestation takes place and is carried out in a practical and intelligent manner. But enough of this; it makes one too sad to think of the loss of what never can be replaced.

Grading Differences—Past and Present

“As to the grading of lumber, etc., there is as much difference between 30 or 40 years ago and now as there is in the quantity and quality of the standing pine and spruce of the same periods. In the old time each piece of lumber had to be handled and examined separately by the culler, and the quality of each piece had to be stamped (with a stamping hammer) on the end, and the quality marked on the face in Red Chalk, the culler being under heavy bonds to perform his work correctly.

“Formerly the mill men sold their seasons' cut the early part of

Wholesalers Adjourn for the Summer Season

A. C. Manbert Reviews Latest Developments in Sales Tax Situation at Last Meeting of Association Until After Holiday Period—Other Business

Considering the warm weather and the numerous outdoor attractions which offer strong opposition to the convention hall at this time of the year, the Wholesale Lumber Dealers' Association held their regular monthly meeting at the Albany Club, Toronto, on Friday June 25th, with a representative attendance.

Business discussions were started when the chairman asked Roy Halliday of the Transportation Committee to make a report on its observations. Mr. Halliday explained since the Canadian National Railways had taken over the Grand Trunk, shippers were finding the rates rather complicated insofar as they had not been changed in some instances since the amalgamation of the two roads. The Canadian National were endeavoring to iron out these inconsistencies.

A. C. Manbert in discussing shipments to the United States asserted that there was a field for valuable association work in getting the most favourable rates from Canadian to U. S. points. In some markets Canadian exporters were considerably handicapped particularly Pennsylvania, because rates were not listed to these centres from Canadian points.

A. E. Eckardt suggested the association should get rates to distant points that would govern the intermediate points also, thereby getting the exact commodity rates to the different centres.

Roy Halliday expressed his opinion that the railways were out to get business and that they would be glad to co-operate in the matter. Accordingly A. E. Eckardt moved that the secretary should be instructed to get the railways to line up rates to U. S. points to be governed by information furnished by the transportation committee. The motion was adopted.

Short Lengths in Rough Clears

An open discussion on any question by the members was invited by Chairman Gordon before asking A. C. Manbert to make a report on the Sales Tax situation. K. M. Brown of the A. E. Gordon Lumber Co. started a lively discussion on the grading of Rough Clear B. C. fir. In presenting his subject Mr. Brown explained that he did not care to antagonize B. C. manufacturers whatever, and was not endeavouring to get the association to dictate to the Coast mills. His point was this: as the rule now stands misunderstanding might easily creep in as to the percentage of short lengths, (that is under ten feet), which might be included in a shipment. He said that there was no doubt that some mills if complained to about an excess of short lengths in a shipment would admit it and proceed to satisfy the buyer. However, no protection is given the buyer on this point who deals with west coast mills. For the benefit of all concerned, and to avoid dissatisfaction all along the line Mr. Brown thought an understanding should be drafted in black and white.

Another point raised by Mr. Brown along the same line was the manufacturing of odd widths. It was his idea that they were not desirable and should only be manufactured under special contract. In both these points Mr. Brown thought the western mills would look at it in the spirit of co-operation and would definitely declare themselves one way or the other. Some of the members thought the proposal would only antagonize the western manufacturers.

Mr. Brown moved that the secretary should be instructed to write Mr. Alexander of the B. C. Lumber & Shingle Mfrs. Association asking them to place a definite percentage of short lengths on shipments of Rough Clear fir, and also the shipping of only in even widths. The motion was seconded by A. S. Nicholson.

At this point in the procedure A. C. Manbert indicated how few of the members knew the conditions as regards the west coast business. The hardwood men present knew practically nothing of B. C. conditions and many of the softwood members were also inexperienced in that market. Mr. Manbert asked the chairman if it would not be better to wait and have the inspection committee consult the members who were buyers of B. C. woods. These men could offer more intelligent opinion on the matter than those unfamiliar with the subject. Upon this suggestion Mr. Brown withdrew his motion which will be accordingly referred to the inspection committee.

Secretary Boulton drew the attention of the wholesalers to the forthcoming outing of the Ontario Retail Lumber Dealers' Association on July 5-9, through the Thousand Islands touching the Bay of

Quinte, Belleville, Kingston, etc. About a dozen wholesalers were with the retailers on their trip up Lake Huron and Georgian Bay last summer and they are again extended a cordial welcome. The steamer Cape Trinity has been specially chartered for the cruise and the individual fare is \$40.00. K. M. Brown moved a vote of thanks to the retail association and was seconded by J. L. Campbell.

Latest Development in Sales Tax

Chairman Gordon next asked A. C. Manbert to give the members the benefit of his knowledge of the latest development of the proposed Sales Tax. Mr. Manbert, in his opening remarks, said he hoped everyone present had acquainted themselves with the letter forwarded to the Minister of Finance which appeared in June 15 edition of the "Canada Lumberman." In a few words he summed up the government's intention to collect the tax at the source of completed manufacture. If the tax as it now stands becomes law wholesalers of lumber would be in an unfortunate position dealing as they do with first and secondary manufacturers. He compared the boot and shoe industry with the handling of lumber. A tanner sold his product to a wholesale dealer in leathers. To keep track of the tax in this trade was easy, because the logical place for the leather wholesaler to sell would be to manufacturers of the finished leather product. The operation of the tax here was ideal as the product suffered no partition.

But not so in the lumber industry. Take, for instance, mill run lumber. An unlicensed wholesaler buys a car of this material and sorts it out and sells some to furniture manufacturers and some to unlicensed men. It is ideal when he sells to the unlicensed man, but when he sells to, say, a furniture maker, pyramiding will result or a system of rebate will be necessary. In anticipation of these shortcomings of the tax misunderstandings are bound to result, with costly adjustments to handle.

Mr. Manbert further stated that these troubles in the manipulation of the proposed tax will be particularly unfavourable to the wholesaler. He has to operate between the primary and the secondary manufacturers. The middleman in any line of trade never was exactly popular, but, as Mr. Manbert phrased it, he must be necessary, otherwise he could never make a living at his business. As a rule anyone, who becomes disgruntled at things in the business cycle, invariably blames the middleman for his discomfort. The proposed act will not improve this line of thought any. On the contrary, secondary manufacturers will endeavour to deal direct with the primary producers and so dodge the arguments about rebates and other issues with the middleman.

Frank Kent was of the opinion that, if continual pressure was brought to bear upon the Finance Minister that he might yet allow the present tax to remain. Mr. Manbert was of the same opinion, but discredited any individual effort, such as sending telegrams to the Minister. It would seem that the only method now open, to get any results, would be through influence. He, however, enjoined the members not to worry unduly over it as something might easily turn up to give the whole situation a much improved aspect.

Mr. Eckardt told the members that he had been advised by official sources that the tax was to be collected at the time of sale. He also related an interesting incident that happened while the deputation of lumbermen waited on the Minister of Finance in Ottawa. At the close of the conference with the Minister and his associates, in conversation with a deputy of the department, he asked him how the lumbermen's reasonings had impressed Mr. Fielding. The reply was a well deserved compliment for Mr. Manbert who led the lumbermen. Mr. Fielding admitted that it was the ablest trade deputation that he had ever met in conference.

J. L. Campbell moved a vote of thanks to Mr. Manbert for the splendid and untiring spirit in which he had worked to get the Finance Department to alter the proposed tax. Referring to Mr. Eckardt's story of how Mr. Fielding was impressed, Mr. Campbell said the association should be proud to have had such intelligent representatives appear at the capital. A. S. Nicholson seconded the vote of thanks.

Before adjournment it was decided that the meetings would be postponed for the summer months.

Continue the Present Sales Tax

Resolution Passed by C.L.A. Directors—Frank Hawkins Resigns Association Secretaryship

An important meeting of the Board of Directors of the Canadian Lumbermen's Association was held in Montreal recently. The principal matter that came up for discussion was the proposed sales tax which is creating so much interest at the present time. As far as the suggested six per cent. measure applies to the forest products line, it has been severely criticized as being unworkable, impracticable and utterly incapable of definite application.

The meeting lasted all the afternoon. The tax was discussed from many points, and the arguments formulated by Mr. Manbert in his letters to Hon. Mr. Fielding were again reviewed. It was held that the tax of 6 per cent. was unjustified, and that the trade could not stand more than 3 per cent. The difficulties of collection were

Bock, the chairman, reported on the recent conference at Ottawa to consider the sales tax. He referred to the effort made to maintain the present tax and reiterated the objections to the new proposal, on the ground of its complicated character and the cost it would entail in book keeping and in tracing sales. Mr. Bock believed that, if the lumber trade could not persuade Mr. Fielding to adhere to the present tax, a much more simple and equitable method of collection than was proposed, was possible.

It was pointed out that a first reading had been given to a bill to authorize 6 per cent. to which Mr. Bock replied that the regulations to be issued later might contain modifications of the objectionable features of the original proposal of Mr. Fielding.

A committee submitted a report on a conference held between representatives of the Wholesale and Retail Associations on the subject of their trading relations. An outline of a proposed agreement as to certain points were discussed, it being decided to resume the discussion at the next meeting, after communicating with the Montreal Retail Lumbermen's Association.

R. L. Sargent, Ottawa
Newly Appointed Secretary

Frank Hawkins, Ottawa
Veteran Retiring Secretary

also alluded to, including the extra expense involved in the licensing system and generally in keeping track of things.

After going into the matter very thoroughly, Messrs. Angus McLean, Dan. McLachlin, Arthur H. Campbell, G. W. Grier and Brig.-Gen. J. B. White were appointed a committee to draw up a telegram to Mr. Fielding. This reads:

"At a meeting held to-day of the directors of the Canadian Lumbermen's Association representing 80 per cent. of the lumber manufactured in Canada, the following resolution was passed:—'that, after a careful investigation of the proposed changes in the Sales Tax Act, we are of the opinion that the proposed Act as applied to lumber is positively unworkable, and we approve and concur in the representations made to you in a letter addressed to you by the lumbermen of Canada, dated June 1st and signed A. C. Manbert, Chairman.' We respectfully request that the present method of collecting the tax as regards lumber, be continued in force and effect."

This resolution is an affirmation of the decision arrived at the Ottawa conference.

The meeting also passed a resolution in favor of the manufacture, sale and importation of oleomargarine.

Resignation of Veteran Secretary

Frank Hawkins, who has been the faithful and esteemed secretary of the Canadian Lumbermen's Association since its inception sixteen years ago, resigned owing to ill-health. He has not been well for a long period, and it is hoped that, relieved from the cares and anxieties of office, he will speedily improve. At the meeting of the directors of the C. L. A., the resignation of Mr. Hawkins was accepted with reluctance, and as an indication of their appreciation of his many years' energetic work in the interests of the organization, they voted him an annual retiring allowance.

R. L. Sargent, who for nearly three years has been transportation manager of the Canadian Lumbermen's Association, succeeds Mr. Hawkins and will be given an assistant to look after the transportation end. Mr. Sargent is well known to the lumber industry and is thoroughly conversant with the working of the Association.

Montreal Wholesalers Talk Over Sales Tax

At a meeting of the Montreal Wholesale Lumber Dealers' Association held on June 22nd, at the Mount Royal Hotel, J. S.

Playing Fast and Loose With Orders

Very few things are certain in the lumber business, but there is one thing in the industry that can always be looked upon as a sure thing. If there is a sharp advance in prices the air is rent with complaints that mills are not shipping old orders at the old prices; and if there is a drop in prices there is an equally vigorous storm of protest that the factories are cancelling orders given at the higher prices which prevailed a short time before. Just at present the complaints are of the latter variety, says the "Southern Lumberman."

It has always been a lamentable feature of the lumber trade that an order for lumber is apparently not regarded as a binding contract, but too frequently looked upon as merely a scrap of paper to be disregarded by the buyer or seller, as the case may be, at his whim. To be sure, a large majority of those engaged in the buying and selling of lumber are conducting their business on an honest, upright business; but there is a sufficient proportion of those who have no regard for the sanctity of a contract to make a sore spot in the industry. The worst part of it is that this disregard for the moral and legal responsibility involved in an order is so frequently condoned and overlooked by men whose standards of honesty in other directions are beyond criticism.

The hardwood trade seems to be peculiarly cursed in this regard, for although the total volume of orders cancelled is not a very large percentage of the total of the business transacted, there are some consumers of lumber who seem to regard an order as an order only when it suits their convenience so to regard it. Too many buyers for factories have fallen into the regrettable habit of speculative buying—which is another name for gambling. They try to anticipate the market and if they think it is going up they place orders for their future needs. If their anticipations are realized they have made a nice profit on the enhancement in price; and if a decline should ensue instead of an advance the easy custom of the industry has decreed that any potential loss may be avoided by the simple expedient of cancelling the order on any flimsy pretext.

Such a chronic lack of regard for moral and legal obligations on the part of either buyers or sellers of lumber is a demoralizing influence in the trade and should be eliminated. It is true that any practice which has been so long forgiven and condoned is hard to uproot, but it can be uprooted if that vast majority of lumber buyers and sellers who conduct their business on a high plane insist on its elimination. Weak-kneed lumbermen have a way of saying "Oh, well, it's true that the customer hasn't any right to cancel that order; but he'll be in the market again sometime and I don't want to antagonize him, so I'll let him get away with it this time." That's not the proper spirit. The man who accepts an order for lumber in good faith has a right to expect that order to be carried out, and he should insist that it be carried out so long as he is living up to his part of the bargain. It is a poor rule that doesn't work both ways, and it is a poor contract that binds only one of the contracting parties. Only a merciful providence can save from bankruptcy a lumber manufacturer who is bound to fill all his old orders when prices advance, and can't make the buyer accept the lumber if the price declines.

Manufacturers of lumber should insist that every order be carried out to the letter; and, to make their position secure, they should see to it that they themselves preserve an equal respect for all orders they accept. The mill man who has squirmed out of a low-price order on an advancing market is in poor position to insist that a buyer stay with a burdensome order. But if the lumber manufacturer's record on that score is clear, he can with good grace insist that the buyer accept the lumber for which he has given his formal order; and he should so insist on a rigid fulfilment of the sales contract, even though it be necessary to carry the matter into the courts to establish the seller's rights.

Too Many Theories and not Enough Practice

Representative Nova Scotia Lumberman Sounds Clarion Call in Getting Down to Business at Once in Forest Conservation

H. T. Warne, of Digby, N.S., is well known as a successful manufacturer of lumber and box shooks. He has been in the lumber game for over 35 years and has had a sound, practical experience in all its branches. Mr. Warne thoroughly believes in the industry in which he is engaged, its progress, influence and usefulness.

An ardent advocate of the conservation of our natural resources and upholding the best traditions and practices of the forest products line, Mr. Warne contributes a few timely observations on present-day tendencies and incidentally relates some lively reminiscences.

After repeated requests on the part of the "Canada Lumberman," Mr. Warne, who is of a retiring disposition, consented to tell something of his acquaintance and insight in the lumber arena. His remarks, which follow, are well worth reading:

So many changes have taken place in lumber activities one hardly knows what feature to specialize upon. Perhaps it would be all right for me to commence with my first trip in the woods as a woodman. In 1886 I began my career, and the first thing I did was to gather fir boughs for a field bed to lay my part with twenty-five others and a comfortable bed it was. I will enumerate some of the unknown equipment that forms a part of our outfit to-day; stoves, lamps, butter, potatoes, cash, pay days, Workmen's Compensation, Stock Companies, overdrafts, section 38 of the Banking Act, logging engines, iced roads, double cutting band saws, edge grain flooring, Chartered Accountants, Sinking and Reserve Fund accounts, Game Wardens, etc.

Here are some of the things we did have; plenty of pork, beans twenty-one times a week, good bread(?) cooked in a bake kettle, molasses and good it was. I remember well as it came from Cuba and cost 17 cents per gallon, and the lumber we cut sold in Cuba for \$17.00 per M. but, best of all, we had a jolly good crew who at night planned their roads and cutting for the next day so that we might do a good winter's work and thus secure a job for the next winter.

I could go on and enumerate, for those were the days when life was real and things were more on an equal than they are to-day. Some one will say this may be true, but we have few who know. What about conditions during 1923 and on?

This brings one to the danger zone, and as it is no doubt a fact, it is so much easier to find fault than it is to do right, one should be very careful. It is equally true that it takes a bigger man to reveal a thing than it does to conceal it.

Are Top Heavy with Theories

I have attended a few conventions and from thought offered, we are top heavy with theory without practice. I believe many times if the preacher could get a good expression from the pews, he would know better how to feed his people.

The average man to-day spends from \$6.50 to \$8.00 per month for cigarettes, and it is not only the extravagant waste to the consumer's mind, body and pocket, but it is the most disastrous article that forms a part of the woods outfit. It has been long conceded that fire has made greater inroads than the axe.

I am prepared to state that in 1914, a fire started on the limits where I am now writing. It looked at first to be a wipe out, but with the use of two hundred men and personal effort, it was burned to a peak, the forest saved and every man was convinced that such a fire could be controlled. The circumstance was so marked, we traced the origin to a man, who had for convenience stayed over night in one of our camps and, as a result of smoking, set the fire. I have carefully kept in touch with these limits and I am convinced there is an annual growth of seven million per year, with the far point not more than ten miles from the town in which I live.

I believe that every wanderer on personal owned forest land should be as promptly prosecuted as if found going through the company's store, also that no employee should either sell or smoke cigarettes in the woods. Our game law should be revised and every man severely penalized found with gun or fishing rod sporting in the woods without a guide. Why should the stranger or town folks have the right to travel our forests without a permit or guide any more than through our plant or office? What will be the use of the game law when the forest is gone? The real hunting game is gone by like that done by natives and land owners.

Though I am speaking for myself, yet I know I am voicing the sentiment of others when I say every lumberman is glad to have a sportsman come into his camp and enjoy freedom. It is the party going into the woods to have a drunk, dodging behind the game law, who is unwelcome. There is no one patrolling the forest, so no proof is to be had and one is forced to complain.

To see British Columbia settlers and ranchers burning up good Douglas fir trees with from two to three thousand feet in them, looked just like burning up \$15 bills. In a great many cases ignorance is the cause of crime. Education of a conservative nature promotes honor and honor suppresses evil. Let us have a half tone cut of some forest grove on the front page of the school book and let the significance of forest conservation be impressed upon the minds of the children.

Should Stop Pulpwood Export

Let us stand shoulder to shoulder with men like Mr. Frank Barnjum, who is on the right trail when he is trying to prohibit the shipment of pulpwood. It only takes a few thousand acres of land if well cut and manufactured to sustain a settlement of two hundred people, provided the owner is not too mercenary.

A great idea is given in the June issue of the "Canada Lumberman" about pulpwood. In my opinion the farmer is the one who would benefit most. He cannot afford to cut young growth any more than he could afford to sell all his planting of beets for greens. There is no one nature assists more than the farmer and he should let the product reach maturity. In 1902 I sold a farm that contained about ten acres of good apple orchard with some twenty-five acres of young second growth spruce. The present owner last winter thinned out some of the better trees and cut sixty thousand feet. I measured one tree that was seventy-three years old and it sawed out three hundred and forty feet of lumber. Beyond any question of doubt the timber has given much better results than the orchard.

I wish I had time to cite just such other cases. Why not sell all our little pigs, lambs, calves, chickens, to the Americans and throw in the boys and girls for good measure?

Nova Scotia Lumbermen Will Hold Annual

Rufus E. Dickie, of Stewiacke, N.S., President of the Nova Scotia Lumbermen's Association, states that the annual meeting of that body, which was to have taken place some time ago, will be held in Halifax on Wednesday, July 4th. An interesting and instructive program has been outlined and a large attendance of members from the various parts of the province is anticipated. The forestry car, which has been touring the province under the direction of the Canadian Forestry Association will be in Halifax at that time and will prove one of the features of the gathering.

In reference to lumber conditions generally in the province, President Dickie says that old stocks have been pretty well cleared up and new stuff is being shipped out about as fast as it is manufactured. He does not think that the cut will be any greater than was at first estimated. The American market has been going on the decline of late but the English market will absorb the stock that would go to U.S. consumers. The English situation is not as good as it was but at the present time is preferable to the American. On the whole, manufacturers will be able to report a good year.

The Canadian Lumber Co., Ltd., of which Mr. Dickie is manager, has been doing very well this season and has shipped and sold approximately one million feet of lumber a month.

International Company Increases Production

The International Land & Lumber Co., Limited, St. Felicien, Que., of which C. W. Bates is vice-president and general-manager, say they are operating their mill to full capacity this season. The cut will be about double that of last year. They have already sold this year's production of railway ties and lumber, and find the price much better than last season. The company have had no trouble with labor so far, and do not expect any; in fact they look for conditions to be very satisfactory as the men are returning from the drives and fighting bush fires.

Mr. McCabe is Appointed Director

C. W. McCabe, Toronto

At the annual meeting of the Campbell-MacLaurin Lumber Co., Limited, which was held in Montreal recently, Arthur H. Campbell was elected president in succession to the late Alex. MacLaurin who passed away several months ago. E. McCa'llum, superintendent of the company's plant at Drummondville, Que., was elected vice-president, and the other directors are George L. Ryon, Ogdensburg N.Y.; DeWitt C. Culver, Brattleboro, N.Y., and C. W. McCabe, of Toronto. The latter is a newly-elected director and has well earned his promotion. Mr. McCabe has been with the company for several years as Ontario representative and is well liked by the industry. He was born in Nova Scotia where his father and uncles have long

been identified with the lumber business, and has been in the game for twenty-two years. His father, H. A. McCabe, is still active in the lumber line and for a number of years has been with the Nashwaak Pulp & Paper Co., St. John, N.B. Young McCabe got his first job in New Brunswick with the Bonney River Lumber Co. when in his teens and performed various jobs in the bush, drive and mill. At the end of three years he had enough practical acquaintance with camp activities to satisfy him for a while, and he decided to spend a few years at school. He finished High School and later business college at St. John, N.B., and next joined Rhodes-Curry, Limited, at Amherst, N.S. He was with them seven years in various capacities as yard salesman, shipper, etc. He then went West and spent some time in the Prairie Provinces, and during the war was with the army for three years, being with the R.C.R. No. 3. A few months after the Armistice, Mr. McCabe became identified with the Campbell-MacLaurin Lumber Co. and has made a big success of the firm's Ontario business. He resides at No. 1 Vermont Ave., Toronto, and takes a deep interest in the Wholesale Lumber Dealers' Association, being one of the most regular attendants at the monthly gatherings.

Quebec Firm Busy Shipping Birch

The Louise Lumber Co., Ltd., of Quebec, at the head of which is H. R. Van, are this season, making large shipments of birch deals and birch timber to the Old Country. The company are very busy at the present time and report that the outlook is steadily improving. Mr. Van states that the exports of the firm are breaking all records at the present juncture.

In reference to the new sales tax, the Louise Lumber Company add that as far as they can see, the measure is unworkable and they do not believe that it will ever go into force. If it does become law, it does not seem possible for the lumber industry to make proper returns unless it is plainly specified just who is to pay the tax. As now proposed, manufacturers will pay the tax in some cases and in other cases it will be passed on and no one knows where it would end. The firms say they are not going to worry about it for the present but are doing all they can to have the present tax of 3% remain as it is.

Lumber Conditions Good in New Ontario

The New Ontario Colonization Co., whose mill and land office is at Jacksonboro, Ont. and headquarters in Buffalo, N.Y., say that their operations are going along in good shape at the present time. They had a sufficient cut of logs during the past winter to stock their mill and, although they were delayed in getting under way until well along in May, their plant has been running steadily. The labor supply has not only been sufficient but also thoroughly efficient as compared with recent years. Higher wages have been paid than last season which the company found necessary in order to hold a good crew. The cut of the New Ontario Colonization Co. will be in the neighborhood of eight million feet, which is a considerable increase over 1922.

In regard to market conditions, the company state that the demand seems to have steadied somewhat from the exceptionally

strong call early in the spring. The market is continuing on a favorable basis and the company are having no difficulty in moving lumber as fast as it is sawed; in fact have not been able to keep any stock in the yard long enough to season properly. Prices have not advanced any in the last six weeks but the demand continues good especially on soft woods and the firm look for a continuance of this state of things for the balance of the year. Manufacturing costs will be higher this season than last. Transportation facilities are good and all shipments are being handled with despatch. This feature is a great aid, the firm state, toward giving service and satisfaction to customers.

New Interests Acquire Colonial Co.

Edwards Lumber & Pulp, Limited, have purchased the mills and limits of the Colonial Lumber Co., Limited, at Pembroke, Ont. These mills have a sawing capacity of some 20 to 25 million feet per annum, cutting mostly white pine. The Colonial Company have been operating for some 20 years and have one of the most up-to-date lumber manufacturing plants in Canada. The amalgamation with the Edwards Lumber & Pulp Co. secures ample spruce and pine sawlogs to furnish the mills at Pembroke with raw material for an indefinite period. The scheme contemplates doubling the capacity of the sawmill forthwith making the output from 35 to 40 million per annum and later on the construction of a pulp and paper mill.

The enlarged industry will undoubtedly mean considerable to the town of Pembroke and to the districts from which the new company will draw its raw material, and will distribute its products throughout Great Britain, Canada and the United States, it being the intention of the Edwards Lumber & Pulp Co. to saw deals for the English market as well as domestic and United States sizes. The principal interests represented in the Edwards Lumber & Pulp Co. are those connected with W. C. Edwards & Co., Limited, Ottawa, and Watson & Todd, Limited, of Ottawa, and Liverpool, England.

The officers of the new company, whose head office is in Pembroke, Ont., are,—Gordon C. Edwards, Ottawa, president; J. W. Smith, Pembroke, vice-president and general-manager; E. R. Bremner, Ottawa, vice-president; W. R. Beatty, Pembroke, secretary.

New Sales Company Starts Deliveries

Some time ago there was published in the "Canada Lumberman" a reference to the Pembroke Lumber Sales Co., Inc., which recently opened offices at 2607 Grand Central Terminal, New York. Further particulars are given of the organization in a recent despatch from that city which says that the company has perfected its organization by the distribution of Ottawa Valley white pine, spruce and spruce lath to Eastern United States territory. Commenting upon the organization and future of the company, the "Lumber Trade Journal" says:—Edward A. Dunlop, of Pembroke, Ont., president of the Sales organization, is also president of the Pembroke Lumber Co. (Ltd.), and the New York firm will handle the entire 1923 cut of white pine, box and better of the Canadian Pembroke mills.

Mr. Dunlop is a director of the Thomas Pink Co. (Ltd.), Marshall C. Small, of Montreal, vice-president of the Sales company, is also a director of the Pembroke Lumber Co., A. L. Eastcott, second vice-president of the New York company, is general manager with headquarters at the Grand Central office. Stanley D. Pearce is secretary-treasurer and assistant manager.

Mr. Pearce was formally with the Meigs Pulp Wood Co., of New York and vice-president of the Cornwall Terminal Co., of Cornwall, Ont., and Oswego, N. Y.

The Sales company will start deliveries from dry stock this month. The purchase of lumber involved in the initial deal aggregated about 20,000,000 feet. Of this, about 8,500,000 feet has been sold as and when ready to ship. The lumber will be brought down from Canada exclusively by rail.

An important feature of the new arrangement lies in the fact that for years the Pembroke Co. has sold its lumber en bloc to outside wholesalers. Formerly, too, at least one third of the output, particularly the higher grades, has been disposed of in the English market.

Through the organization of the Sales company it is expected that practically the entire product of the Pembroke mills will be disposed of this year in the United States, particularly in the metropolitan district. The company stresses the fact that it is to sell particularly in the New York market soft white pine, which is practically the same as Michigan cork pine.

Other directors of the local company, besides the officers named, are George Cahoon, jr., Grand Mere, Que.; David Percy Maguire, London, England, and Sir Alexander H. Maguire, also of England.

Several Legal Decisions of Interest to Lumbermen

Montreal Firm Must Pay on Lath Purchase

Breach of a contract for the purchase of one million laths entered into between the Riverside Manufacturing Company of Cap Madeleine, Que., and Blair Bros., Limited, Montreal, in the spring of 1920, resulted in an action in the Superior Court, Montreal, in which Mr. Justice Surveyer has given judgment in favor of the Riverside company in the sum of \$8,124.65, with interest from the service of summons, and costs.

By the contract in question, the Riverside Manufacturing Company sold to the defendants one million laths to be manufactured at their sawmill at Cap Madeleine, Que. The document was entered into on February 24, 1920, but on June 16 of the same year the defendants returned their copy of the contract, stating: "We prefer, and have arranged, not to hold you to this agreement."

The plaintiff company answered that they regretted the stand taken by defendants, and that they would wait a few days before returning the contract, trusting that after consideration the request for cancellation would be withdrawn. In reply, Blair Brothers stated that they again asked the Riverside company to cancel the contract. A protracted correspondence ensued between the parties, in the course of which the Riverside Manufacturing company declared that they would cancel the contract upon payment by Blair Brothers of \$4,000, covering loss which would result from resale, owing to a drop in the price of laths. This offer was not accepted by the defendants, and after the expiry of a delay it was withdrawn. Finally, the Riverside Manufacturing Company turned the matter over to its solicitors. The defendants refused to consider themselves bound by the contract, and the laths were duly sold at Three Rivers at public auction, under due process of law. The difference between the price brought at the auction, and that agreed upon in the contract amounted to \$7,705.60.

Mr. Justice Surveyer held that in the instance the purchasers could not cancel the sale without the plaintiffs' consent, and that the latter could compel the defendants to execute their agreement and take delivery. The laths were payable on January 2, 1921, and the contract being one of a commercial nature in which the time of performance was fixed, the debtor was put in default by the mere lapse of time. As defendants did not take delivery before the time agreed upon, the plaintiffs were justified in selling the laths at public auction.

Including the loss suffered by the resale and expenses of the sale, the amount in which the defendants were liable was placed by Mr. Justice Surveyer at \$8,124.65, with interest from date of summons and costs.

Deserters are Given Needed Punishment

For years past the Canadian operating lumber firms have been victimized by men who apply for work in the woods. The latter are advanced money to pay their railroad fare, etc., and then default in the engagements and decamp without returning the money advanced. Of late this practice has become a common one, and although many firms have been victimized, they have suffered their losses rather than institute court proceedings against the defaulters.

There is one firm, however, who have had the courage to go after the dishonest lumberjacks and that firm is the Greening Lumber Company, an Ontario concern operating in the Abitibi district, who last season in its lumber operations in the woods was victimized by seventeen men who were engaged to work in the woods and to whom the company advanced their railroad fare as well as lodged and boarded for several days. They rewarded the firm by deserting.

The manager of the Greening Lumber Company determined to make an example of these culprits. Mr. M. Maclean succeeded in locating three of the men in Quebec, and on May 14 came to the city and lodged a complaint against them in the Quebec Court of Quarter Sessions. A warrant for their arrest was issued and when the men were taken into custody by the provincial police, Mr. Bernard Devlin, was engaged by Mr. Maclean to prosecute. The accused were arraigned before Judge Lachance in the Court of Sessions, who were at the time remanded to goal, pending an effort to effect the arrest of the other fourteen, who, however, skipped the city and district when they had been warned of the apprehension of the three

laborers. The case came up for a hearing on June 12 before Judge Lachance. The three were found guilty and each was fined \$5.00 and costs or in default of payment to serve fifteen days in prison. The fine with the cost amounted to \$41.30 for each to pay, and not having the money the offenders were sent to prison.

Mr. Devlin, in summing up the case, informed the court that the crime was a common practice among certain men who applied for bush work to Canadian lumber companies, and demanded that the accused be severely punished as an example.

Judge Lachance, in passing sentence, rebuked the accused, telling them that the offence charged against them was serious and criminal, and they were liable to be severely punished by a prison sentence. As it was the first case of the kind which had been brought before them, he would be lenient and would let them off with a fine of \$5.00 and costs or fifteen days' imprisonment. The judge stated that in future if any person or persons were brought before him for the same offence, he would make an example of them.

Farmer Enters Action Against Sawmiller

Farmers and lumbering men are interested in a case which was argued at Sherbrooke, Que., recently before Mr. Justice Globensky and Mr. Justice White in the Superior Court and finally taken en delibere.

Plaintiff, Delphis Lobonte, instituted an action against Joseph Martel for the sum of \$999 for damages occasioned to his property, as well as for loss of hay, due to the gathering of refuse from defendant's sawmill on his property. The plaintiff owns a farm of about 230 acres at St. Julie de Wolfestown, the property being intersected by the White River. The defendant owns a sawmill higher up the river, and plaintiff claimed that the debris, sawdust and bark, resulting from his lumbering operations, were thrown into the river and gradually accumulated along the banks of his property, covering an area of seventy acres, partly spoiling the hay crop.

Defendant pleaded that the mill had been operated for the past fifty years and that, altogether plaintiff has occupied his farm for many years he had never complained previously. Defendant expressed the opinion that the present action was malicious. Defendant also intimated that even though the action were justified, he should not be held entirely responsible, as there were other sawmills operated on the river. Finally, it was contended that the sawdust, instead of damaging the property, would increase its value, and application was made for the dismissal of the action with costs.

Partners are Held Liable on Note

Judgment condemning Joseph E. Leclerc et al. to pay \$800, being the amount of a note, with interest from its date, to La Fonderie de Plessisville, was handed down recently by Mr. Justice Wilson in the Superior Court, Montreal.

The note, dated November 15, 1920, was made payable seven months after date to the order of J. A. Gagnon, and was negotiated to La Fonderie de Plessisville, who sued Leclerc et al. as being jointly and severally liable as partners in the Royal Lumber Company, signatory to the note.

The defence pleaded that the signature of the Royal Lumber Company was not the signature of the defendants doing business in partnership in Montreal; that this signature was not approved with their knowledge or authorization; that moreover, the plaintiff was not a holder in due course, having received it only for collection, without having given valuable consideration.

In upholding the plaintiff's action Mr. Justice Wilson stated that Julien Therrien, as agent for his wife, was doing business in partnership with Leclerc under the name of the Royal Lumber Company, and that they had power to sign the said note and to bind the partnership with regard to third parties for obligations contracted in the partnership name, in the ordinary course of business. Since the plaintiff company was a holder in due course, Leclerc et al. were held jointly and severally liable on the note, with interest from its date.

Mr. Gordon Speaks Hopefully of West

A. E. Gordon, Toronto

Mr. A. E. Gordon of the A. E. Gordon Lumber Company, Toronto, who recently returned to Toronto after a trip through Western Canada to the Pacific Coast, reports that throughout the Crow's Nest district of British Columbia the loggers, who were recently on strike, have resumed work but, as a consequence of this strike, some mills will be short of logs and will have to close down considerably earlier than expected. Owing to several mills in this district being cut out of timber and on account of failures, etc., there are comparatively few plants operating this season. Some of these have tie contracts with the railways who will take a large share of their production so that the output of lumber in this section will be quite limited. Elsewhere

throughout the Mountain districts production seems to be about average. On the Coast the large majority of the mills operating have export orders enough on their books to keep them busy for two or three months and some of them are actually refusing further export business. There is very little accumulation of stock of any kind. The demand from the United States, Atlantic Coast and California which fell off abruptly about a month ago, is now reviving

Mr. Gordon says that the British Columbia shingle market presents another of its periodical tangles. Cedar logs and bolts were so costly during the early part of the year that the mills claim they could not break even, so most of them shut down for several weeks during April and May. Timber was then reduced in price and the mills started up again, only to be faced with a serious slump in the United States market which absorbs from 75 to 90 per cent. of the production. Shingles are now selling below the cost of production, owing largely to the pernicious habit of placing cars unsold in transit. This condition of affairs must right itself quickly or the mills must close down again.

Crop conditions throughout the Prairie Provinces look much more promising than they have in years. Optimism again prevails in the Canadian West. This optimism is already being felt in an increased demand for yard stocks.

Giving it as his opinion that the condition most ardently desired by every right thinking person engaged in the lumber business is steady and reasonably profitable production, together with well balanced markets to absorb such output, Mr. Gordon thinks the recent lull in the demand from the Eastern United States and the Canadian markets will have a beneficial effect in the desired direction and will make for sound and steady conditions throughout the balance of the year.

Northern Lumber Concern Voices Complaint

The Pigeon River Lumber Co., of Port Arthur, Ont., say there has been quite a brisk local demand for lumber so far this season which will likely be kept up for the remainder of the summer. The firm are not now operating their saw mill for the reason that they have not been successful in obtaining from the Government suitable timber areas at right price. They assert that it appears wrong for the Provincial administration to adopt a policy which has as its effect the retarding of the lumber industry which, they believe, is caused by the enormous pulp concessions granted to pulp and paper concerns who use only a small proportion of the merchantable timber on a given area.

The Pigeon River Lumber Co. are of the opinion that there will be considerable advance in the price of pulpwood this fall. Nearly all the mills have consumed all their reserve wood, which will throw them into the market for huge quantities.

Kept Busy on Spruce and Spoolwood

The James Richardson Co., Matané, Que., say their cut this season is about seven and a half million feet, principally of spruce and spoolwood. They had figured on bringing out close to ten million feet, but shortage of labor, the cold late spring and illness in the camps all helped to curtail output. None of their contractors

filled their contracts, and on account of the sudden jump in men's wages, quite a few finished up with a loss. The company in some cases had to increase the price allowed for logs in order to keep the camps going. Considerable sawing was done during the winter with a portable mill, but the firm still have two mills on the river front sawing spruce and spoolwood and expect to finish cutting early in August.

Most of the output has been sold. The James Richardson Co. are shipping lumber out as fast as boats can be secured, and the bulk of spruce is going via Quebec for the American market. Inquiries for lumber have been coming in well with prices holding up consistently with the exception of lath.

An officer of the company stated recently that the prospects are there will be a heavy cut in the Matane district next winter and probably a further increase in wages. The cost of lumber will, certainly, be up from 10 to 15 per cent. from the present outlook.

Good Demand for Lumber up North

R. S. Potter, lumberman, of Matheson, Ont., states that he will have a cut of about 600,000 feet, three-quarters of which is white pine and the remainder jack pine and spruce. He has completed his sawing for the present season. Mr. Potter adds that the demand for lumber in the north country is fairly good. Prices are ranging from \$32.00 to \$40.00 per M. feet, f.o.b. cars for spruce and jack pine.

In regard to labor, there is plenty of work and good men looking for jobs are very scarce. Several mills in the Matheson district were late in getting started this season but the majority that have logs are now operating.

Average Lumber Cut Around Sioux Lookout

G. E. Farlinger of Sioux Lookout, Ont., says that lumbering operations in that district are about on an average of those conducted in former years. The cut of the different mills will be about the same as last season. The labor supply is fairly good and wages approximately the same as last summer. Lumber prices are somewhat less than they were a few months ago, but it would appear, that there will not be any further reductions this season. Mr. Farlinger says that his own operations are not as large as during past years. It is too early as yet to form any accurate opinion regarding what the coming season's operations will be.

More Sawmills Add New Equipment

The Waterous Engine Works Co., of Brantford, Ont., have recently supplied one, eight foot band mill for John Harrison & Sons, of Owen Sound, and also another mill of the same dimensions to Pratt & Shanacy, who are successors to Booth & Shannon, at Biscotasing, Ont.

The Waterous Co. have equipped the new mill of the Hope Lumber Co., at Little Current, Ont., with the following installations: two 8 ft. band mills; one, 42 in. opening carriage; two, 10 in. steam feeds; one, nigger; two, 18 x 24 engines; one, log loader; one double deck kicker; two, cant flippers; one, 48 in. edger; two, 72 x 16 boilers, and also live rolls, shafting, transfers, conveyors and drives as well as one, eight saw automatic trimmer.

Awful Devastation of Forest Fires

Late estimates placed the value of forest damages by fires in New Brunswick at not less than \$5,000,000. The fires in the richest virgin forests of the province continued unabated for many days. As a result of the serious situation Hon. C. W. Robinson, Minister of Lands and Mines, issued a proclamation ordering prohibition of all forest travel in the eight northern counties of New Brunswick, Restigouche, Madawaska, Gloucester, Northumberland, Kent, York, Carleton and Victoria. All existing forest travel certificates for that territory were cancelled, and by the same proclamation the prohibition of all brush and slash burning throughout the entire province, effective since May 15th, was continued indefinitely. The Minister also sent instructions to all fire wardens who are created special constables under the Fire Law, that all violators are forthwith to be arrested and held for prosecution under the provisions of the criminal code.

A reply received by Col. T. G. Loggie, Deputy Minister of Lands and Mines for New Brunswick, to his request forwarded lately to Ottawa for a detachment of mounted police to patrol the northern fire areas of the province, stated that the request could not be compiled with owing to lack of men.

National Hardwood Lumber Broadening Out

W. F. Oliver of Toronto Elected to Board of Directors—Associate Membership Facilities Now Presented—Number of Inspectors Constantly Growing

A year of increased activity and developing interest was revealed in the reports and addresses given before the twenty-sixth annual convention of the National Hardwood Lumber Association which was held in Chicago on June 13th to 15th. The attendance was large and the proceedings marked by optimism and unanimity.

Seventy lumber firms in Canada are members of the National Hardwood Lumber Association, and it is pleasing to record that a Canadian wholesaler in the person of W. F. Oliver, of the Oliver Lumber Co., Toronto, was elected a director from Canada. He succeeds George C. Goodfellow, of Montreal. Mr. Oliver will serve for three years. John W. McClure, of Memphis, Tenn., was re-elected president, and Earl Palmer, of Memphis, Tenn., was elected an honorary-director.

The social functions of the gathering were very enjoyable. One of the features was the annual banquet, attended by no less than 1,200 persons. It was an entertainment de luxe and the best traditions of the Association from every standpoint were maintained.

Many matters of moment were discussed and President McClure, in his address, forecasted a season of prosperity. He said business conditions were fundamentally sound and the members might look forward with confidence to a period of reasonable activity during the remainder of the year. Some disciples of gloom had predicted that we must some day return to prewar values, but Mr. McClure stated that clocks were not designed to run backward; the world moves forward and "the sooner we cast into forgetfulness the pre-war standards of value which are gone forever, the sooner will we adjust ourselves to the new standards by which business can be gauged hereafter."

Principle on Which to Build

In conclusion he said:—"May I be permitted to refer to that greatest of all codes of ethics, the Holy Bible, a simple philosophy upon which must rest all enduring things, whether it be an individual, an association or a nation? This is no Sunday school discourse, but a plain business statement. True success and prosperity depend upon the applied rules of Christianity, and what better foundation could exist for the National Hardwood Lumber Association than the eternal principle upon which our structure has been built from its inception, and which is best expressed in those deathless words of the Great Teacher, "Therefore, all things whatsoever you would that men should do to you, do ye even so to them."

Frank F. Fish, the veteran secretary-treasurer, gave a comprehensive report in which he said:—"The National Hardwood Lumber Association neither supports nor opposes the new movement toward the proposed general standardization of the lumber industry.

Its attitude is simply that of non-participation. If later on it should develop that the proposed theories are practicable and that they can be carried into effect to the advantage of the industry, there is nothing in the position of the association to restrain it from adopting and applying these theories. The advanced position which the hardwood lumber industry has attained through the operation of the National Hardwood Lumber Association in all matters relating to practical standardization fully justifies that division of the lumber industry is marking time until the remainder of the industry has come abreast of that position.

"During the last year the process of readjusting grades to meet the ever-changing conditions within the industry has proceeded upon the same broad, orderly and evolutionary lines of development as those which have hitherto been adopted by the association in its work of revision and betterment of existing standards of inspection."

Personnel of the Membership

The membership of the Association today stands at 1,302, there being a large addition to the ranks during the past year. Mr. Fish said that for many years attempts have been made to stir up factional strife within the membership and we still hear the charge that "the National Hardwood Lumber Association is dominated by wholesalers and middlemen." While these statements have been conclusively branded as false, the lie still persists and is constantly circulated by our opponents who are unable to injure us by statements of facts. In order to determine the exact percentage of sawmill operators and wholesalers within the membership of the association, a questionnaire was sent out in October last, and the results showed 62 per cent of the membership at that time to be manufacturers of lumber, and owing to the fact that many members conduct more than one mill operation, the total number of hardwood sawmills in operation by our members was 1,006.

A year ago the number of salaried inspectors in the Association was 65. Today the number is 86, showing an increase of 21. The present rules are the most complete and comprehensive ever published, according to the secretary-treasurer, and are recognized as equitable by all branches of the trade. This is evident by important gains registered in the Inspection Department.

Toronto Great Hardwood Centre

Mr. Fish then presented some figures from the Inspection Department for the year ending June 1st, 1923, showing the quantity of lumber inspected in each district and market, the amount earned and exact cost of maintenance. Toronto stands well up in the list, and the number of feet inspected during the past year was

W. F. Oliver, Toronto
Newly elected Director

G. C. Goodfellow, Montreal
Retiring Director

H. L. Hebard, Montreal
New Eastern Inspector

10,064,174, the earnings being \$15,280.05 and expense \$14,687.25. In Montreal the quantity of lumber inspected was 3,505,095 feet, the earnings were \$5,334.86, and the expense \$5,260.92. Of all the hardwood centres Toronto stands sixth on the list, being exceeded only by Memphis, Grand Rapids, Chicago, Louisville and Cincinnati. The inspection rules have during the past year been printed in French for distribution abroad and in the province of Quebec where the National Hardwood Association has about 30 members.

Many other matters also came up, including associate membership which may be enjoyed for \$50 a year. This membership will include all the privileges of the Association with the exception of voting power at the annual meetings. The right to join is extended to furniture, automobile, piano, gramophone, washing machine, woodenware and other plants in this line. The constitution was duly amended to include associate membership, and it is believed that the movement is one which will result in greater strength for the N. H. L. A. It will establish a closer union between consumers and producers and is a visible evidence of the esteem and confidence in which the National Hardwood Association is held by hardwood-consuming interests.

Visit by Canadians to Madison

A large party accepted the invitation extended by the United States Forest Products Laboratory at Madison, Wis., and paid a visit to that institution, a number of Canadians taking in the trip. At the Forest Products Laboratory the equipment and working of the institution were inspected, more especially the plans and progress which have been made in the field of experimental and practical hardwood standardization.

Among those present from Canada at the gathering were. John McBean, (McBean & Verrall); R. McDonagh, W. F. Oliver, George Kinnon, John J. Miller, (Anderson-Miller Lumber Co.); R. A. Neilson, (Russell-Harris Lumber Co.); Frank Kent, J. A. Cadenhead, Toronto; J. E. Baechler, (Goderich Mfg. Co., Goderich); Lorne

Heeney (Percy E. Heeney Lumber Co.), Kitchener; Joseph Hall, Waterloo, and others.

The New Director from Canada

W. F. Oliver, or "Frank," as he is generally known, who has been made a director for Canada on the N.H.L.A., is a popular and genial lumberman who has a wide acquaintance with the trade, not only in the Dominion but across the border. The Oliver Lumber Co. Toronto was the first Canadian lumber firm to join the National Hardwood Lumber Association. This was some eighteen years ago, and a great many Canadian concerns have come into the Association since that date.

Mr. Oliver has been engaged in the lumber line since 1904. His first position was with the Peterboro Lumber Co. and the Dickson Co., Peterboro, after which he joined his father, the late Joseph Oliver, and brother, J. O. Oliver, in the Oliver Lumber Co., of which firm he is today vice-president, and looks after the sales end and yards. Mr. Oliver is also a past president of the Lake Shore Country Club. That he will be a live-wire director, goes without saying, and he has already notified the Canadian members that if there is anything which they believe would be for the betterment of the Association, he will be glad to take it up at any meeting of the directors. Mr. Oliver confidently believes that the membership from Canada in the N.H.L.A. will exceed 100 before the close of the present year.

Secretary Fish announced that action had been taken at the semi-annual meeting of the National Veneer & Panel Manufacturers' Association, by which the members of that association, numbering about thirty, would individually become "full fledged members" of the National Hardwood Lumber Association. President Harry Klein, of the first named association, was called on the platform, and in a few words confirmed Secretary Fish's announcement, adding that there were in the veneer and panel industry seventy or more manufacturers not affiliated with the National Veneer & Panel Association, so there is room for missionary work on the part of the National Hardwood association to bring them "within the fold."

Only Living Commissioned Culler

(Continued from page 39)

the year, and the sale covered the entire production of the mill or mills from 6 ft. and up 7" deep and two and three inches thick. The sales were made on basis of percentages of size and quality, viz., about 80% of regulars and 20% of oddments. Regular pine deals were 12 ft. long 11" wide and 3" thick and qualities generally called for about 20% 1st, 45% 2nd, 20% 3rd, and 15% 4th, when 4th quality were called for.

"Regulars in spruce were 12 ft. x 9 x 3 and oddments were 6 ft. and up 7" and up, and the qualities ran much the same as white pine except in 1st quality which generally turned out a little better than the white pine did.

When the mills were ready to start sawing the owners put in a requisition for a culler, an order was issued, and the culler proceeded to the mill. While he held the order everything appertaining to the grading was absolutely under his control. Neither the buyer or the seller could interfere or dictate to him. If either seller or buyer or either were not satisfied with his work their only recourse was to call for a survey, and if the culler was found in fault he was penalized, and if he was in the right the party calling the survey was mulcted in all the costs of the survey and arising expenses.

"Up to about 1880 a large quantity of pine deals were rafted and floated to Quebec, where they were culled, and landed and piled, and when well seasoned shipped overseas. Quite a portion of the rafted deals were shipped direct from the raft into the ship.

Deals Both Floated and Bright

"The deals landed from the rafts and piled or put aboard ship from the raft were called floated deals, while the deals that were not rafted but piled and seasoned before shipment were called bright deals. The floated deals were considered better lumber for working up than the bright deals, for the reason that they were in the water for from six months to two years and all the gum and sap was drawn out of the wood by their long immersion in the water. When breaking up the rafts between each tier or layer of deals (a raft would be composed of from 15 to 20 tiers of deals) there would be an inch or more thick of gummy sap like jelly.

"Landing and piling deals from the rafts was quite a heavy job for the men employed. To begin with each tier of deals as it was uncovered was washed by boys with chip birch brooms and pails of water dashed on the deals. The culler then went over and classed them, after which carriers heaved the deal on their shoulders, and carried them from the raft to the wharf (which at low tide was anywhere from 25 to 40 ft. high) and then to the piles. This meant covering quite a distance of ground, as each quality had separate piles and each dimension had separate piles, and no matter how high the

pile was, the carrier mounted it with the deal on his shoulder and placed it in its proper position.

"When one considers that those deals were from 7" up to 30 inches wide, 12 ft. long and up and 3 inches thick, and water soaked for six months to two years, one can imagine the weight they would be on a man's shoulder, and in many cases they would carry two of 7 or 8 inch at one time. When one looks back to those days there certainly is a big difference between the laborers of then and the present day. In the latter days of the rafting the Hamiltons installed steam pumps at their new Liverpool Cove for washing the deals in the rafts.

Requisition For A Culler

Form M. 20
Cullers

Quebec, 1st June, 1880.

..... G. B. Hall Raft
Consisting of Deals and plank
Lying at Montmorence Falls
To be measured and culled

This Order is for One Raft Only

On account of Owners and to be marked
The Deals & Plank ready for measuring & culling at one o'clock
River and section of the Province where got out Gatineau
River

Specification to be Delivered to Owners
..... G. B. Hall.....

My Post Office Address is as follows:

..... G. B. Hall Name
..... Quebec Post Office
..... Quebec Province
To the Supervisor of Cullers.

Received 1st June 1880, Ten o'clock A.M.

Supervisor of Culler's Office

Quebec, 4th Sept. 1884.

M. O'Shaughnessy Raft
Consisting of deals, etc.
Lying at Nicolet
To be measured, Culled

This order is for one raft only

On Account of Owners' Mark
The Deals are ready for culling at o'clock
To Thos. Malone, Junr.)
Culler.) James Patton
Supervisor.

No. 13

The Proper Time to Build is Now

There is always the man who is hanging back as well as the one who rushes ahead. The fellow who takes the middle course is, perhaps, the wisest and the greatest gainer in the long run. Being too precipitant is frequently as harmful or disappointing as being too tardy, and vice versa.

This thought leads one up to a consideration of the home building proposition. There are some people still hanging around waiting for a drop in prices, believing that the good old days and basis of costs of 1914, will be ushered in once more. Then there are others who are always tarrying not for one or two decreases but several. They seem to be living in the past and not to appreciate the fact that we have advanced towards a higher scale of wages, of costs, of living, of enterprise, thought and action. Most of those, who are holding aloof for the 1914 level of prices, are perfectly willing to accept the higher pay that they are getting in 1923 for their labor. The man or woman, who expects everything to be all income and no outgo, will never travel very far on the road to progress, wealth or expansion.

Many inquiries have been made of late why building has not received a greater impetus in smaller cities and towns. An investigation into the cause of postponement of structural operations generally reveals a number of causes. One is that people are buying motor cars instead of putting their money in a home and are also hanging around for cheaper commodities. If a decline in price took place, they would still say that values were too high and wait for another drop. Quotations would never get quite low enough for many of these dilly-dalliers to proceed—they are ever chasing a shadow or an illusion.

The fellow who is always going to do this or that, is the one who seldom scores. The proper time to build is when one has an opportunity or the facilities for doing so. Waiting for a certain set time or peculiar combination of circumstances, may now and then result in a small gain or temporary advantage but, on the whole, there is little to be said in its favor.

Recently a citizen connected with the building trade in an Ontario city of 25,000 people, said,—“If anyone talks about building, invariably his mind reverts to the prices that prevailed before the war, but, in most other progressive cities, the people have accepted what might be called the ‘new normalcy,’ and since they are reconciled to it, they are going ahead on that basis.

“Consider our building permits here. I can name places not much larger than this city where the building permits for one month are bigger than ours were for a whole year. Supposing we had

\$80,000 in building permits this season; this would be equivalent to \$32,000 before the war. At the present time the only works of any importance going on are what might be called ‘patchwork’ and the rebuilding of certain structures which have been destroyed by fire or, absolutely require re-enlargement.

“Our people have been kidding themselves for years that conditions were working back or would move that way toward the 1914 levels of costs. For a comparison of percentages we may take 100 as the 1914 average, and on that basis the 1920 average was 275. In 1922 this proportion had decreased to 220, but this year it has gone up fifteen per cent. to 253. In other words the cost of building to-day is 153 per cent. higher than in 1914 and fifteen per cent. above last year's costs. And while the people here have been talking about waiting for a return to the old pre-war costs, other cities have recognized the fact that a new level of prices has become fixed and established and their progress has been laid on that basis.

I don't want to discourage building; in fact I don't think you could discourage it any more than it is; but we're not going to get anywhere, we're going to fall behind in the race, if we are going to wait until costs get back to those before the war.

I have figured on jobs both last year and this year, have done everything I could to reduce the price as much as possible, but those who had the work to let cancelled the whole thing because they were thinking of 1914 conditions and were going to wait until they were restored. The proportions of increases for the last four years ought to convince anybody that deflation in the building trades has reached the limit, and by the trades I mean the cost of labor and materials.”

Concluding, the speaker said that so far as he could learn, some big jobs which were mooted early in the winter, had been indefinitely postponed. People were spending more for pleasure than they did ten years ago. They seemed to care less about the home, its influence, enjoyments and associations and more for the rush and swirl of outdoor life and its attendant excitement. The average man will skimp and save for an automobile, whereas a decade ago, his chief desire would have been to own property of permanent value in the way of a house and garden. Today he will step out and buy a comparatively expensive car and think nothing of it, and his outlay—not to speak of depreciation—has only begun. When it comes to acquiring or investing in a home, although his wages have doubled or trebled, he balks because the venture will cost him two or three times more than it did in 1914.

Alas, how times and customs have changed! Many seem to be living in the days before the war, fondly yet fallaciously hoping that conditions as they then prevailed, will sooner or later return. It is all apparition, fantasy or fiction—call it by whatever name you please. All should learn to face the situation as it is to-day, cease dreaming and get down to basic conditions and fundamental facts.

When World Will Face Timber Famine

As many of our clearest thinkers are assured, we make a mistake in shipping wood in the unmanufactured state. We have, even yet, the best stand of merchantable timber on the North American continent, but we need not for that reason value it lightly. The day is coming when the world will face a timber famine.

The true value of material is the labor of hand and brain that has gone into its manufacture. This statement while undeniable when analyzed, is not always apparent, because people confuse money, which is but a token, with that which it represents—human labor.

What, for instance, is the value of a pine tree in a wilderness? Nothing. But let a wayfarer pass along and fell the tree and convert it into cordwood; it is now worth just the labor he put into it, as would be proved should he sell it. Were the tree driven to a mill and worked into finished products it would be worth more; precisely the equivalent of the time and toil of hand and brain put into the wood. Let us not forget, either, that all labor is not of the hand; the fruit of an active brain has its price too. This lumber transported to a distant point acquires a new and an added value, for identical reasons. Thus the more labor we put into an article the more value it acquires.

When we sell lumber in the rough we sell little labor; when it has been manufactured to the limit we receive a maximum, employing the greatest number of workers, and do away with unemployment so far as is possible under the conditions. A country where all its men are working, and receiving a fair day's pay for a fair day's work is a prosperous country, and its attractions for the emigrant become irresistible.

Heretofore our difficulty has been to provide sufficient jobs for skilled labor; we have always sufficient for the pick and shovel man on account of the disinclination of the average Canadian for such labor but we have advertised widely that there is little room for the

average skilled man. We are thought to want farmers only.

We export much of our nickel, our lead, our zinc, our timber, our asbestos, in the crude, raw form, and buy it back at a vast increase in price. Could we manufacture each of these and of them all lumber is the chief, we should have a larger, richer, population, and our farms would expand automatically to provide the food to pay these additional workers.

Moreover, by offering nothing but the hardest labor to immigrants, we obtain the most ignorant and illiterate of them; this has already affected the average grade of our immigrants. One no longer sees the same class of man in a lumber camp that we knew thirty years ago, for instance.

Thus there are many cogent reasons that should be well weighed by our statesmen, why we should prohibit the export of raw, unmanufactured material.

Lesson on Discounts for Dealers

Those who have been giving real attention to the matter of discounts for cash and for prompt pay are now voicing the opinion that the discounts offered should be made large enough to prove interesting, and thus get results. They say that contractors and other customers pay but little attention to a nominal 2 per cent discount, whereas if it were 5 per cent, and they were properly jogged up as what this means in interest it would result in more cash business and more prompt payment and thus save the retailer from keeping a lot of capital tied up in outstanding accounts.

It is an odd thing, too, that though we have the matter of heavy discounts working all around us every day we do not seem to be impressed with the part it plays in getting prompt pay. In comes the gas and electric light bill, with a discount for payment before a given date, which is enough to cause practically every user to make an effort to pay promptly. If he overlooks it, he knows he must pay the full amount, and the difference between the net and the gross amount of the bill is enough to make him pay promptly.

Now then, turning again to the matter of discounts for prompt payment. About the best and strongest looking plan of this kind that has come along as a regular offering in the dealer trade is 5 per cent off for cash in ten days, with the amount due net in 30 days. Those who put this into practice and make it work, instead of merely making a bluff at it, generally get good results.

The W. S. Dickey Clay Manufacturing Co., of Kansas City, issues a little service bulletin to dealers, a recent number of which the matter of discounts was discussed. In addition to some tabulated figures showing the rates of interest earned by taking discounts, it is pointed out that the easiest money a buyer can make is that earned by paying cash in time to take the discount, and it is money that is to be had without argument within the prescribed time. To illustrate some unfair practices on the part of customers this bulletin says:

"If a customer who buys \$200 worth 12 times a year on terms of 2 per cent 10 days, net 30, were allowed to take off 2 per cent in 20 days he would take \$48 per year in discounts to which he was not entitled. If the firm selling him had 100 customers doing exactly the same thing, they, together, would take \$4,800 to which they were not entitled. The same 100 customers, if buying on terms of 5 per cent 10 days, net 30, and taking all discounts in 20 days would take \$120 each or \$12,000 together, per year, in discounts to which they were not entitled."

Then, just to show what discount earnings are when reduced to interest the following table from a chart compiled by the National Association Of Credit Men was given.

2% 10 days, net 60 days =	14% per annum
2% 10 days, net 30 days =	36% per annum
4% 10 days, net 4 mos. =	13% per annum
4% 10 days, net 60 days =	29% per annum
5% 10 days, net 4 mos. =	16% per annum
5% 10 days, net 60 days =	36% per annum
5% 10 days, net 30 days =	90% per annum
6% 10 days, net 4 mos. =	20% per annum
6% 10 days, net 60 days =	43% per annum
7% 10 days, net 4 mos. =	23% per annum
8% 10 days, net 4 mos. =	26% per annum

Now then, before you launch out with new ideas and plans in this matter of discounts for cash or for prompt pay, get fixed in your mind this fact. That the discount must be put on the charge before it can be taken off. In a word, there must be included in the original price enough margin to cover this discount. Otherwise you are going to be a loser by giving to your cash customers some of what should be your own profit. And now if you feel inclined to ask, why put it on and give it to the cash customers and then charge the full amount to the credit customers. The reason is that credit, which is a good thing to extend the volume of business, costs money. There is not only some loss of bad accounts, but even if all the accounts are paid you have a lot of money tied up in these accounts and in the

stock you are carrying to supply them which would yield 6 per cent interest without any work on your part. Therefore, you must advance your price to cash customers to cover this interest and loss in bad accounts, or you must close the accounts with notes paying interest in order to come out even. The easier and simpler and more satisfactory way is to make enough profit margin in the original price of your material to cover interest on open accounts and to make room for allowing discount to cash customers and those who pay promptly.

Sane But Not Insane Competition

According to the old adage "Competition is the life of trade." Whilst this may be true in a general sense, there is a brand of competition which involves the ruin of those who are foolish enough to enter into it. It is competition run mad—the kind that cuts prices below the cost of the commodity and of the overhead in order that a big volume of business may be piled up. There is, of course, only one result, if this underselling is continued to any length. It means a general lowering of values, which affects almost the entire trade in the locality where such competition exists, and the wiping out of those who are not financially strong.

The lumber industry has not been free from this unrestricted competition. In one large city, many retailers, for a considerable period, sold lumber on a margin which did not cover overhead expenses and this, too, during a period when orders were by no means scarce. One or two retailers started the underselling, others followed, and soon there was a more or less general condition of exceptionally low prices. Fortunately, it did not last very long—it was brought home to the retailers that they were doing business at a loss, and that their customers alone received the benefit.

Whilst trade associations are, primarily, not intended to deal with prices, there is no doubt that they have a tendency to check competition of an unfair character. It is neither to the interest of a trade, nor, in the long run, to the public, that prices should be cut to the extent that they imperil the existence of firms engaged in a given branch of commerce. If a trade association can exercise a restraining influence on those members who are inclined to sell on a basis which either represents a loss or no profit, it is filling a useful function. The mere fact that men are members of an organization established to promote trade interests goes a long way to prevent senseless competition. This is one aspect of trade association work which is worth consideration.

The Proper Use of Leisure

At a meeting of the Classical League of the United States held recently in honor of a British scholar, Mr. Elihu Root complained that millions of workingmen with shorter hours and more money did not know what to do with their leisure.

The same reproach lies against many who have more money and leisure than the wage-earners. They are not numbered by millions, but probably as large a proportion of the rich as of the so-called working class use their leisure unprofitably.

Mr. Root is impartial in his censure, and says that in the case of the wealthy the children of thousands are "going to the devil" because they have not learned to interest themselves in anything else than spending money.

Machinery has robbed millions of the creative and artistic satisfaction which the handicraftsmen of earlier days found in their labor. They make only a fractional part of the product, and their tasks are repetitious and monotonous.

But mechanical invention and quantity production have been accompanied by shorter hours of toil, and factory operatives, who do not spend this added leisure improvingly, are leading more barren lives than their antecedents, who at least found some mental stimulus in their work.

The right use of leisure is one of the gravest problems of the age. The schools have not solved it, though they could make a greater contribution to the solution if the majority of boys and girls did not leave their studies so soon, before they have developed any intellectual curiosity of any kind.

The world is full of devices for wasting time that give pleasure to the unreflective, but in many countries there is also wide access to books and other means of self-improvement. Where religion and education lose their appeal, leisure becomes a danger instead of an opportunity.

What Lumber Dealer Has the Best Kept Yard?

Southwestern Ontario Association Will Inaugurate Competition—Border Cities Retailers Welcome Visitors and New Members—The Sales Tax

An important meeting of the Border Cities Retail Lumber Dealers was held at the Prince Edward Hotel, Windsor, on June 22 when various matters were taken up and local topics discussed. After an enjoyable dinner the members extended a warm welcome to several visitors including George N. Kernohan, of London, President of the Southwestern Ontario Retail Lumber Dealers Association, B. F. Clarke, of Glencoe, Secy-Treas. of the same body, G. B. Van Blaricom, Editor of the "Canada Lumberman," Toronto, and others.

J. C. Scofield, chairman of the Border Cities Association, presided and expressed his pleasure at seeing such a representative attendance, particularly in view of the excessively hot weather and the approach of the holiday season. Mr. Winters, on behalf of the Lions Club, addressed the gathering, stating that it was the intention of the club to erect a frame shelter for widows and mothers of poor families who were not able to finance a summer holiday. The mothers and children would be the guests of the Lions Club for two weeks at a neighboring waterside grove and in order to complete the summer structure, several thousand feet of lumber were required. It was decided by those present that the Lions Club would be helped in this important matter and the members decided to donate the stock needed.

Trade ethics were discussed at considerable length and all the dealers expressed their determination to adhere strictly to the code which was recently adopted. Ed. Allen, of the National Door and Hardwood Flooring Co., which recently opened a warehouse in Windsor, was present and made a short address in which he expressed the hope that the relations of his firm with brother retailers would be cordial and sincere. He added that his organization would be only too glad to work in harmony and unison with the dealers of the district so far as trade practices were concerned. Mr. Allen was admitted as a member of the Border Cities Association, and also announced his intention of joining the Southwestern body.

Another question taken up was the Sales Tax and the opinion was general that the present measure should be left unchanged. It was felt that if any alterations were made it would result in complications and misunderstandings.

From the reports presented by various speakers, business in the Border Cities is active at the present time and building operations are being carried on extensively.

Mr. Kernohan, of London, Mr. Clarke, of Glencoe, and others spoke briefly in regard to the lumber outlook and future meetings of the Southwestern Association. Mr. Clarke announced that the invitation of the Seaman Kent Co. to visit their hardwood flooring plant at West Lorne, Ont., had been accepted and it was proposed that the visit be paid on Wednesday, July 25, on which date there will also be a meeting of the Association.

The matter of holding a competition among the retail yards of the Southwestern District and awarding a diploma to the winner was taken up by the Committee which was appointed at the last annual meeting of the Southwestern representatives. Mr. Scofield, chairman of this Committee, stated that it would be advisable to offer recognition to the retailer having the best kept yard, the most effective appliances in guarding against fire and the best safety devices to ward off accidents. He felt that such a contest should inspire friendly rivalry and would result in yardmen taking pride in their surroundings and equipment.

How Judging Will be Done

Mr. Van Blaricom, Editor of the "Canada Lumberman," offered some ideas in regards to how the contest could be conducted in the best interests of the members. He suggested that the maximum award could be 300 points. The score could be subdivided into three 100 points heads, viz., neatness and attractiveness of yard; greatest protection against fire hazards; best accident prevention record. All dealers should be sent full details of the contest some time in advance and the various points on which scoring or the basis of judging would be made should be set forth as clearly and succinctly as possible.

Mr. Clarke stated that he would draft the conditions in which yards should be judged and submit the same for approval at the next meeting in West Lorne. He felt that this competition should be got under way in order to arouse greater pride and appreciation of what a well kept and efficient lumber yard and factory really means,

not only to the proprietor himself but to the community in which he does business.

One phase of the question was how the contest should be judged and several suggestions were put forth, one being that Chief Defields, of the Windsor Fire Department, be the judge in regard to the proper protection of premises from the standpoint of fire hazard. An official of the Workmen's Compensation Board would probably be selected to render decision so far as safety records and appliances are concerned. The scoring on behalf of the best kept and neatest lumber yard would probably be done by competent persons who will travel over the district and visit the premises of all the dealers. It was thought that it would require about a week for the judges to visit every yard by means of a motor car and the Association will bear all the expense. The score of each yard, under the various headings, will be published and a diploma presented to the winner.

It was observed once the competition was under way, that it would be comparatively easy to have it continued from year to year and that any, who took part, would not feel disgruntled if they did not happen to win, but would accept the verdict of the judges in a true, sportsmanlike manner. Further details of the contest will appear in an early edition of the "Canada Lumberman."

The annual midsummer outing of the Ontario Retail Dealers Association down the St. Lawrence river in July was referred to and several of those present recalled the delectable associations of last year's trip up the Lakes. It is felt that there will be a good representation from Southwestern Ontario this year to the Thousand Islands. A number from the district have announced their intention of taking in the sail and fraternizing with their brothers in the forest product line from the other parts of Ontario.

Northwestern Dealers Form an Organization

The retail lumber dealers of Port Arthur and Fort William held a meeting recently to complete organization. There was a representative attendance and the proceedings were characterized by considerable enthusiasm. It was felt that local problems of interest crop up from time to time which require adjustment.

Another matter, in which the yard men are greatly interested,

M. J. McDonald, Port Arthur, Ont.

is the conservation of the timber resources of the north and the inauguration of a progressive and effective policy of reforestation and fire protection.

The new district body of lumbermen starts off with splendid prospects, seven firms being identified with the organization.

Martin J. McDonald, of the Thunder Bay Lumber Co. (who is also a member of the Executive the Ontario Retail Lumber Dealers' Assn.) was elected Chairman. G. F. Clarkson is the new Vice Chairman and J. H. McLennan, is the Secretary-Treasurer of the newest district body in the retail lumber arena.

Will Soon Sail on Jolly Outing

Everything in Readiness for Lumbermen's Trip to Thousand Islands—Many Reservations

Everything is now in readiness for the annual midsummer outing of the Ontario Retail Lumber Dealers' Association from July 5 to 9. The steamer "Cape Trinity" of the Canada Steamship Lines, has been chartered for the occasion and a sail of several hundreds of miles will be enjoyed.

The annual trips of the retail lumber dealers are always interesting and enjoyable and this one bids fair to equal any in the past. Nothing can be more delightful than a four days' fresh water voyage at this time of the year, and the cost is very reasonable. For adults the figure is only \$40.00; \$35.00 for children and \$10.00 for a child sharing a berth with one of its parents. This covers all charges.

The itinerary of the trip has already been published in the "Canada Lumberman." The boat will leave Toronto at 2 P.M. on Thursday July 5th and return on Monday July 9th. The trip includes Brockville, Thousand Islands, Kingston, Bay of Quinte, Belleville and the Niagara River. Toronto will be reached on Monday morning July 9th.

Those who have not yet sent in their remittance to W. B. Tennant, of John B. Smith & Sons, Strachan Ave., Toronto, chairman of the outgoing committee, should do so at once. A large number have already responded and it is hoped that others will give their attention promptly to this matter as this year's jaunt is going to be "the greatest ever."

On behalf of the Ontario Retail Lumber Dealers' Association, Secretary Boulthbee has extended an invitation to the members of the Ohio Retailers' Association and the Michigan Retailers' Association to join their brethren from Ontario this year in taking the trip down the St. Lawrence. It will be remembered that last summer the Ontario, Michigan and Ohio "boys" held a united outing up the Great Lakes as far as Sault Ste. Marie which was very enjoyable. It is expected that quite a number from across the border will travel with the Ontario dealers, their wives and families on the forthcoming pilgrimage.

Quebec Province Retailers Are Active

The executive of the Province of Quebec Retail Lumber Dealers' Association held a meeting at the Queen's Hotel, Montreal, recently, under the presidency of Mr. G. Lebel. Seven provincial districts were represented.

The subject of incorporation of the association was discussed, and it was decided to take steps to that end. It was also agreed that the offices of the association should be the same as those of the Montreal branch.

The question of issuing a monthly bulletin was gone into at some length. It was decided that such a journal would be in the interests of the association and that arrangements for issuing a monthly bulletin should be made.

The Sales Tax was under consideration, and a resolution was passed to the approving of the steps taken by the Montreal branch in forwarding a resolution to Mr. Fielding. The meeting agreed that the tax should be collected at the source of production, and collected either on the purchased price or as a separate item shown on the producer's invoice. Further, that no further tax should be collected from the remanufacture, having regard to the fact that many members carried on business as lumber retailers and as sash and door manufacturers.

The meeting approved of the action of the Montreal branch in the matter of securing an amendment to the Quebec Lien Law so as to give the retailer better protection. The following committee was appointed to act with the committee of the Montreal branch: Messrs. J. M. Dessureault, City of Quebec; J. O. Asselin, Brompton; H. H. Sheppard, Sorel; L. E. Parent, St. Agathe, and J. E. Giroux, Victoriaville.

Reports from district directors were submitted. These dealt with the organization and the association, and with membership.

Problems of City Lumber Retailer

The city retailer of lumber has problems of his own. In some ways they are different to those of the man who is doing a country trade. He has not, as a rule, the same facilities as the country retailer for gauging the credit of the people to whom he sells, for the reason that the financial standing of city purchasers are not known as intimately as those of buyers who reside in country districts. He is, in consequence, more often the victim of unscrupulous people who buy lumber for speculative building. The city retailer may do a larger turnover, but his risks are proportionately greater,

especially in the Province of Quebec, where he has practically no protection against those who are out to evade payment and to dodge the law.

Then he is up against those who encroach on what he considers his legitimate customer. There is no doubt a difference of opinion as to what constitutes buyers who fall within that line, a difference largely actuated by the class of business done by the sellers.

Competition, too, is keen, and this often leads to profits being cut to an extent that involves only a small and inadequate return on the capital invested and risks taken. But that, after all, is a matter of individual policy, and there are dealers who decline to do business on a margin which they consider too narrow to be safe.

There are some compensations on the other side, and it may be fairly stated that the city retailer is filling a function in the commercial community which entitles him to a reasonable remuneration for his activities and for the capital he invests.

Psychology of Salesmanship in Retail Yards

Psychology is a big word and doesn't mean much to a great many of us, but, nevertheless, there is a whole lot more to it than just a peculiar combination of a lot of unusual letters. If more of us realized what there is in knowing how the other fellow uses his brain and how he can influence his thoughts and actions by suggestions and introductions into that brain, with slight effort on our part, we might all be on the road for "something better."

One of "the boys" tells us how he has obtained a liberal education in the retail lumber-yard salesmanship through his experiences in practicing this psychology on his customers. Here's the way he tells us about it:

"Several years ago, when I was young in the game and had had very little experience in selling, I used to say to each customer after I had given him all that he asked for, 'will that be all?' And the customer would usually say 'Yes.'"

One day my boss heard me say that, and I guess he must have just been reading something about this psychology stuff, because he suggested that I change the wording of my question so that I would not suggest to the customer that he was through with his purchases.

The next man that came in bought some two-by-fours, some boards and a little drop-siding. I thought this was my chance to try a new form of question, so I said, 'Isn't there something else?'

The man stopped and scratched his head for a second and then said, 'Why sure, I'll need some shingles for the roof of that shed.' So I also sold him the shingles.

Now if I had not started him on the right track he probably would not have thought of those shingles until he was going by the competitive lumber yard on his way home, and then he would have driven into that yard to buy his shingles.

I was quite pleased with the new form of question and my new success with it, and used that question for some time after that.

Then I got to thinking that if a general suggestion worked such wonders in selling, why wouldn't a direct or specific suggestion help to sell those articles which we were most anxious to move. So, instead of saying, 'Isn't there something more?' I changed it again to 'You'll need shingles for the roof of that shed, won't you?' or 'Here's some short lengths of boards and two-by-fours that several farmers are buying for hog feeding troughs. You need a couple of troughs in your hog pens, don't you?' It worked like a charm, and I was as much surprised as anyone at the ease with which such sales were made. A great many farmers really needed hog feeding troughs, but did not realize their need until it had been suggested to them.

The same idea worked out equally well in selling a house or barn bill. When I was going over the list of materials I would suggest that a mirror door would be just the thing to put on the coat closet in the hall, or built-in cupboards in the kitchen. If it were a barn bill, wouldn't a cupola with complete barn ventilating system make that barn the last word in barn buildings? or wouldn't a complete set of barn equipment in that new barn make it increase the output of those cows so that they would soon pay for the additional investment.

I was always careful to use the word investment in place of the word expense. I learned that farmers, as a rule, do not like the word 'expense,' and were inclined to tighten up whenever it was used; but 'investment' gave the idea of a return in profits and they were more ready to put their money into 'investments.' The job was simply to show those farmers how the investment in good buildings was profitable, and then the rest was easy. But the suggestions went a long way in getting them started on the right track.

I tried the same idea in getting the money. On the 'jag trade' instead of saying 'Do you want to charge this to your account?' I would say, 'You want to pay cash for this, don't you?'

That is the extent of my study of psychology, if that is what you call psychology, and I'd like to go farther with it if it will continue to increase sales and profits as it has thus far."—Wood Construction.

How Lumber Production Stacks up in Each Canadian Province

Forest Products Statistics, Census of Industry Division, Ottawa, at the head of which is R. G. Lewis, have compiled figures setting forth the total production of softwoods and hardwoods in Canada during the year 1921. The subjoined figures show the number of

million feet of the various kinds of lumber sawn and the value as well as the quantity and value of laths and shingles.

The detailed record, as given by the Department from each of the provinces in the Dominion, is as follows:—

Total Production, Lumber Lath and Shingles in Canada—1921

Softwoods	Lumber		Lath		Shingles	
	Quantity	Value	Quantity	Value	Quantity	Value
Spruce	874,456,000	\$24,621,202	340,973,000	\$1,935,370	42,822,000	\$157,079
Douglas fir	680,845,000	16,613,882	84,730,000	636,950		
White pine	480,214,000	17,228,534	199,051,000	864,013	8,274,000	30,413
Hemlock	232,169,000	6,114,436	48,352,000	209,345	3,719,000	12,031
Cedar	95,675,000	2,799,167	9,293,000	43,869	2,923,150,000	10,496,153
Red pine	85,530,000	2,515,507	9,426,000	47,815		
Balsam fir	71,707,000	1,834,217	14,830,000	78,135	6,774,000	24,119
Jack pine	51,574,000	1,268,086	27,048,000	128,186	1,251,000	5,555
Yellow or bull pine	40,020,000	1,001,493				
Tamarack	35,323,000	823,181				
Total softwoods	2,647,513,000	74,819,805	733,703,000	3,943,683	2,985,990,000	10,725,350
Hardwoods						
Yellow birch	68,897,000	2,355,503				
Maple	47,962,000	1,771,742				
Basswood	26,118,000	914,700				
Elm	21,063,000	710,208				
White birch	19,712,000	652,179				
Poplar	10,679,000	332,548	10,000	60	393,000	1,231

Beech	8,445,000	243,559				
Oak	3,058,000	149,909				
Chestnut	371,000	18,588				
Butternut	335,000	13,018				
Cherry	216,000	8,794				
Hickory	174,000	8,154				
Walnut	23,000	1,765				
Red alder	9,000	207				
Total Hardwoods	215,785,000	7,491,457	10,000	60	393,000	1,231
Unspecified	6,009,000	137,323	70,736	244,378	197,000	515
GRAND TOTAL	2,869,307,000	82,448,585	804,449	4,188,121	2,986,580,000	10,727,096

Ontario

In Ontario the total lumber cut in 1921 was 734,054,000 feet b.m., of the value of \$24,518,164. The number of pieces of lath was 353,337,000 of the value of \$1,503,474. The output of shingles was 40,389,000 of the value of \$171,642. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
White pine	398,872,000	14,432,700
Red pine	80,275,000	2,344,150
Hemlock	72,460,000	1,987,203
Spruce	44,565,000	1,258,001
Jack pine	34,326,000	804,488
Maple	31,875,000	1,184,989
Yellow birch	14,882,000	539,122
Elm	14,043,000	498,941
Basswood	12,688,000	454,475
White birch	5,916,000	208,980
Poplar	5,347,000	202,517
Beech	3,907,000	114,695
Ash	3,188,000	106,659
Cedar	2,833,000	85,400
Oak	2,267,000	111,184
Balsam fir	1,355,000	38,106
Tamarack	748,000	21,773
Chestnut	371,000	18,588
Hickory	132,000	6,234
Cherry	104,000	4,903
Butternut	59,000	2,354
Walnut	15,000	1,415
Unspecified	3,844,000	91,078
Total	734,054,000	\$24,518,164

Quebec

In Quebec the total lumber cut in 1921 was 649,334,000 feet b.m., of the value of \$19,656,462. The number of pieces of lath was 121,649,000 of the value of \$652,216. The output of shingles was

361,496,000, of the value of \$1,283,056. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Spruce	384,220,000	\$11,262,556
Hemlock	57,295,000	1,562,226
Yellow birch	46,392,000	1,605,575
White pine	42,802,000	1,628,122
Balsam fir	36,764,000	949,236
Maple	14,177,000	531,960
Basswood	13,316,000	456,834
Jack pine	11,284,000	306,700
White birch	9,787,000	309,457
Cedar	8,683,000	255,646
Elm	6,130,000	193,302
Ash	5,510,000	203,359
Red pine	4,087,000	134,894
Beech	3,254,000	97,685
Poplar	2,644,000	64,388
Tamarack	822,000	19,486
Oak	695,000	35,311
Butternut	263,000	10,344
Cherry	112,000	3,391
Hickory	42,000	1,920
Walnut	8,000	350
Unspecified	1,047,000	23,221
Total	649,334,000	\$19,656,462

New Brunswick

In New Brunswick the total lumber cut in 1921 was 269,983,000 feet, b.m., of the value of \$7,810,622. The number of pieces of lath was 179,383,000, of the value of \$1,081,172. The output of shingles was 183,246,000, of the value of \$658,347. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Spruce	208,203,000	\$6,100,012
Balsam fir	23,568,000	619,842
White pine	18,884,000	557,719

Hemlock	9,460,000	249,687
Yellow birch	2,772,000	78,510
White birch	2,539,000	95,399
Maple	1,125,000	33,431
Elm	861,000	17,243
Jack pine	588,000	11,750
Cedar	424,000	11,131
Beech	321,000	8,790
Red pine	315,000	10,910
Poplar	127,000	2,467
Basswood	113,000	3,351
Tamarack	34,000	600
Butternut	13,000	320
Ash	4,000	95
Unspecified	632,000	9,315
Total	269,983,000	\$7,810,622

Nova Scotia

In Nova Scotia the total lumber cut in 1921 was 115,246,000 feet b.m., of the value of \$3,054,995. The number of pieces of lath was 26,383,000 of the value of \$139,336. The output of shingles was 17,857,000 of the value of \$63,574. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Spruce	73,805,000	\$1,971,833
Hemlock	20,418,000	453,929
White pine	7,135,000	270,364
Balsam fir	4,838,000	117,531
Yellow birch	4,594,000	124,144
White birch	1,364,000	35,485
Beech	913,000	20,484
Red pine	825,000	24,783
Maple	752,000	20,043
Cedar	242,000	6,956
Jack pine	100,000	2,500
Oak	92,000	3,214
Tamarack	26,000	640
Ash	21,000	470
Elm	12,000	252
Poplar	11,000	270
Unspecified	98,000	2,097
Total	115,246,000	\$3,054,995

Prince Edward Island

In Prince Edward Island the total lumber cut in 1921 was 5,803,000 feet b.m., of the value of \$158,712. The number of pieces of lath was 766,000, of the value of \$4,035. The output of shingles was 7,064,000, of the value of \$23,158. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Spruce	3,271,000	\$96,312
Balsam	1,387,000	31,871
Hemlock	504,000	11,223
Yellow birch	257,000	8,152
White pine	216,000	6,083
Beech	50,000	1,705
Red pine	28,000	770
White birch	26,000	650
Maple	23,000	703
Cedar	20,000	600
Poplar	10,000	373
Elm	5,000	110
Tamarack	2,000	60
Basswood	1,000	40
Unspecified	3,000	60
Total	5,803,000	\$158,712

Manitoba

In Manitoba the total lumber cut in 1921 was 61,727,000 feet, b.m., of the value of \$1,398,067. The number of pieces of lath was 14,876,000 of the value of \$73,297. The output of shingles was 34,000 of the value of \$102.00. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Spruce	60,423,000	\$1,369,884
Poplar	941,000	20,409
Tamarack	278,000	5,950
Jack pine	69,000	1,264
Elm	12,000	360
Oak	4,000	200

Saskatchewan

In Saskatchewan the total lumber cut in 1921 was 10,892,000 feet, b.m., of the value of \$273,093. The number of pieces of lath was 1,995,000, of the value of \$12,111. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Spruce	10,346,000	259,455
Tamarack	400,000	10,000
Jack pine	55,000	1,347
Poplar	91,000	2,291
Total	10,892,000	\$273,093

Alberta

In Alberta the total lumber cut in 1921 was 26,002,000 feet, b.m., of the value of \$711,149. The number of pieces of lath was 1,640,000 of the value of \$5,715. The output of shingles was 2,243,000 of the value of \$10,715. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Spruce	23,114,000	\$628,795
Jack pine	2,523,000	73,999
Poplar	344,000	7,805
Tamarack	21,000	550
Total	26,002,000	\$711,149

British Columbia

In British Columbia the total lumber cut in 1921 was 996,266,000 feet, b.m., of the value of \$24,867,321. The number of pieces of lath was 104,420,000 of the value of \$716,765. The output of shingles was 2,374,251 of the value of \$8,516,512. The different kinds of wood cut into lumber and their value were as follows:—

	Feetage	Value
Douglas fir	680,845,000	\$16,613,882
Cedar	83,473,000	2,439,384

Total	996,266,000	\$24,867,321

Newsgraphs in Realm of Lumberdom

La Cie D. Rouleau & Fils, Ltee., St. Tite, Que., state that their mill is not operating at full capacity at the present time, and it is not their intention to cut much timber next winter. The reason for this action is the large wages which they are obliged to pay and the transportation charges which they contend are much too high. S. M. Rouleau states that no doubt the result of the high wages will be an appreciable increase in the merchandising price of lumber because it is necessary to get a price proportionate to the advanced cost of manufacture. He states that the high cost of living to-day is responsible for the heavy demands made by labor, and until the cost of things comes down in general, he does not believe there will be any recessions.

J. D. McCormack, general-manager of the Canadian Western Lumber Co., Fraser Mills, B.C., was in Toronto recently on business. His stay, however, was much shorter than he intended as while in the city he received an urgent message to return to the West owing to the illness of Mrs. McCormack, who has since greatly improved.

The village of Upsalquitch, fifteen miles from Campbellton, N.B., on the International Railroad, was swept by fire recently. The station and dwellings were all destroyed as well as the sawmill of Reid,

Smith & Mitton. Although small in size, the village is the centre of a large lumber business.

P. L. Canfield of Canfield-Wilmot, Limited, Woodstock, Ont., and Wm. Griesinger, of the Windsor Lumber Co., Windsor, returned recently from an extended motor trip through the Eastern states. They visited all the leading cities on the Atlantic coast as far south as Washington.

Leak & Co., wholesale lumber dealers, have removed from the Bank of Hamilton Building to Room 526 in the new Federal Building, Toronto, where they have commodious and well-appointed offices.

Rose, McLaurin, Limited, -wholesale lumber dealers, have removed from the Bank of Hamilton Building to 525 Federal Building, corner of Richmond and Sheppard Sts., Toronto, where they have attractive quarters.

Paul S. Collier, of Rochester, N. Y., secretary of the North Eastern Retail Lumber Dealers' Association, spent a few days in Toronto recently, calling upon friends in the trade.

R. S. Plant, of Toronto, eastern sales manager of the Vancouver Lumber Co., Vancouver, returned from a business trip to St. John and other points in the East.

New Pulp Mill at Bathurst

The ground wood pulp mill of the Bathurst Company, Ltd., recently began operations. A feature in connection with this is that the first sod for the mill was turned just eight months ago, thus registering what is said to be a world's record in construction work of this kind. It is expected that newsprint will be rolled out of this mill by July.

The method of handling the logs is both efficient and simple. From the river the logs are raised by means of the modern chain belts to cut off saws where they are sawn into uniform lengths. After passing through these saws they are taken by another chain belt for transportation to the barkers. After the bark is removed they are carried by another series of chain conveyors from floor to floor until they are delivered to the top where they are fed through special floor openings into the boxes which lead directly to the great grinders, huge stone cylinders which revolve at the rate of 240 revolutions per minute. As the logs approach the stones, a device hydraulically operated brings them against the grinder with the pressure of 100 tons and water fed over the stones carries the ground wood through a sluice at the bottom. From here the pulverized wood fibre is pumped through underground pipes to the paper room, where the process of making it into paper ready for the use of newspapers of the world is carried on.

The mill when completed will have four grinders and later it is expected that two more will be installed. Everything about the mill is electrically operated and every device for the rapid and convenient carrying on of the work has been secured. It is said that the mill is the most up-to-date and thoroughly equipped of its kind on the continent.

Pulpwood Embargo Should be Imposed

George W. Sisson, Jr., President of the American Pulp and Paper Association, at a conference held in Chicago, stated that in the north eastern States, where the pulp and paper industry is concentrated to a degree found in no other section, and where the forests have been heavily overcut for many years, the industry cannot operate without the importation of a large percentage of its wood.

No country on the globe exports pulpwood in the raw, except Canada. Its export of pulpwood amounts pretty close to 1,250,000 cords per year. The pulp and paper manufacturers of the U. S. have been anticipating an embargo on Canadian pulpwood for some time. As far as the actual supply of timber is concerned the Dominion is in the same plight as the U. S. Canada is assuming the lead in the pulp and paper industry and in order to keep that lead there is only one course open for the Dominion: It must at all costs retrieve its wasted and diminished fortune, and most of all really protect the coming second growth, and further inaugurate a policy of cutting for a substantial annual yield.

Pulpwood Concerns Have Been Transferred

The Long Lake pulp and timber limit which was awarded by tender to J. H. Black, 36 Toronto St., in July 1921, and upon which before April 1922, he was to establish a pulp mill, situated at some point in the district of Thunder Bay, and equip it, was recently transferred by Mr. Black to Lewis L. Alstead, of Appleton, Wisconsin. Mr. Alstead has taken over the responsibility of carrying out the necessary work and has now all the right, title and interest in the limit formerly held by Mr. Black. Mr. Alstead is the principal man behind the projected mill of the Great Lakes Pulp & Paper Co., at Port Arthur.

On June 15th 1921 the Nagagami River pulp and timber limit was awarded by the Ontario Government to the Transcontinental Development Co., Limited, 85 Bay St., Toronto. Afterwards the company's name was changed to that of the Transcontinental Paper Co. The original holders under the conditions of sale were required to begin construction on a pulp mill and carry out certain other regulations by October 3rd 1921.

The Ontario Department of Lands and Forests state that owing

to the inability of the holders to locate a suitable waterfront on the limit, a further extension of time is being sought in the hope that negotiations may be had with the Hydro-electric Commission that will result in a satisfactory solution of the power problem now apparently confronting the company obligated to develop the area.

Chicoutimi Company Will Extend Operations

The Chicoutimi Pulp Company, Limited, and the Bay Sulphite Company, Limited, have under consideration extensive plans for developing their limits. These include the construction of a railway from Port Alfred to limits on the Peribonka. Mr. Hall Caine, M.P., one of the directors of Becker & Company, Limited, London, England, is now in Canada with a view to securing the assistance of the Federal and Provincial Governments in building the line, which would be 120 miles long. This line would open up the limits and ensure a supply of pulpwood to supplement that now available. The usual subsidy from the Provincial Government is pretty well assured. It is understood that the Chicoutimi Pulp Company contemplate the erection of a large newsprint mill, presumably contingent on being able to secure the larger supply of wood referred to.

Mr. Hall Caine states that in view of the larger demand for pulp and newsprint in England and the United States, the outlook favours a shortage in pulp, and the object of his visit is to make arrangements for a full supply. The newspapers in England are enlarging their editions and are going after increasing circulations. The newsprint mills there are booked up to the end of the year. Canadian pulp, he added, is now regarded with great favour there, the difficulty being to obtain sufficient to meet the demand.

Work Will Start Soon on New Mill

Tenders for the construction of the buildings at Fort Alexander for the Manitoba Pulp & Paper Co., Limited, will be called at once, and actual construction of the plant will commence immediately after, it was stated by B. W. Thompson, vice-president of the J. D. McArthur Co., Limited, Winnipeg. Mr. Thompson said the success of Mr. McArthur in financing the scheme in the east would assure the work being well underway this year.

The scheme is a \$4,000,000 proposition and negotiations with financial interests just completed were for the placing of \$2,500,000.00 in bonds and \$500,000.00 in preferred stock. Another \$1,000,000.00 in preferred stock will be raised. Clearing the site of the new plant at Fort Alexander has been completed and 400,000 cubic feet of wood has been placed there and a sawmill to cut it up. A dock is being constructed on Lake Winnipeg near Victoria Beach, and all materials for the plant will be hauled there by train and then taken up the river by barge to the site.

Prohibition of Pulpwood Export Comes Up

The question of stopping the export of pulpwood from private lands to the United States is evidently arousing much interest in Government circles in Ottawa. The issue has become a live one and more so particularly in view of the great damage to pulpwood forests this season by fires which have raged in various parts of Quebec and New Brunswick. Strong representations have been made to the Government by interests both in favor of and against the proposition.

The exports of pulpwood from private lands are increasing, and last year amounted to a million cords. The census of industry show that during the last three years 3 2/3 million cords were exported. It is pointed out that the wages and salaries paid to convert pulpwood into pulp and paper averaged \$14 per cord, and if the wood cut from private lands and exported to the United States during the past three years had been turned into the finished product at home, Canadian payrolls would have been increased by \$51,000,000 and a great number of men employed.

Hon. W. S. Fielding, Minister of Finance, has given notice at Ottawa of a resolution which declares that the Export Act shall be amended "by providing that the Governor-in-Council may by regu-

lation prohibit the export of pulpwood from Canada of the variety, kind, place of origin or having the particulars of ownership or production prescribed in the regulation."

Company Has Secured Large Contracts

The Sir W. G. Armstrong Whitworth & Co., the well-known English company which recently gave its guarantee for the principal and interest of an issue of Charles Walmsley & Co., of Canada, Limited, bonds amounting to \$1,000,000, has issued its financial statement for the year 1922. An advance of £28,662 in the net profit is recorded, the amount available after charging £224,345 for debenture interest, being £467,550, against £438,888 for 1921, when debenture interest absorbed £2,827 more at £227,172. With £832,091 brought forward the total available is £1,299,641. Two interim dividends, each of 6d per share, were paid during the year, leaving £771,516, which the directors propose to carry forward. The reserve fund stands at £1,400,000, and the shore premium and debenture redemption account at £328,307.

The report states that since the issue of last year's report the company has secured important contracts for ships and in the other branches of manufacture. While there is an improvement in the general trade of the company there is keen competition and prices are very low.

How Pulpwood Supply is Diminishing

Two large tracts of land have just been sold in Nova Scotia to American paper companies for shipment of the raw wood across the border. Mr. Frank J. D. Barnjum of Montreal says that recently some 100,000 acres of pulpwood in Nova Scotia were destroyed by forest fires so that everything appears to be combining to get rid of the small supply of wood in Nova Scotia just as rapidly as possible. The same thing applies to all Eastern Canada only to a much larger extent.

Mr. Barnjum lately returned from Quebec and he states that as he went down the St. Lawrence by steamer, they kept meeting many vessels loaded with pulpwood on the way up the river to the United States. Looking off in the distance he could see the smoke of forest fires in several sections. The whole thing combined was, Mr. Barnjum adds, to say the least very disconcerting and discouraging.

Brompton Company Reports Good Outlook

The Brompton Pulp & Paper Co., of East Angus, Que., say that the prospects for lumber sales and distribution are better than last season. The production in the Brompton district is about the same as it has been for several years. J. A. Bothwell, General Manager of the Brompton company observes that their supply of logs is sufficient to keep them running at full capacity during the summer months. The company last year did not sell their lumber owing to the low quotations which then prevailed. They have now disposed of their entire stock on hand at prices very much in excess of what could have been secured a year ago. While stock the company are cutting at the present time is being held over for future use.

Quebec Forest Fires Do Wide Damage

The forest fires raged throughout the province of Quebec and were the cause of much concern to the Provincial Government. Premier L. A. Taschereau, who watched the situation carefully, issued a manifesto warning the new settlers to stop burning their slash until abundant rains have put an end to the danger which menaced the destruction of the forest resources. In his manifesto he said the situation caused by the draught in the province was such that any small fire may bring on a conflagration. Already fires had ravaged not only the forest but destroyed houses, and even menaced the lives of those fighting the flames. The Premier thought it his duty to warn settlers not to burn their slash until abundant rains would have put an end to the danger. He also requested all those who live near the forest, not to hesitate in lending their assistance to the Government forest rangers when fires break out as they cannot judge how far the flames will extend. It was important for all citizens of the province to realize the gravity of the situation, when already over 200,000 acres of forest had been destroyed this spring, and, if the drought continued the loss would be considerably more. Therefore, he solicited the help of all citizens to fight the fires and the settlers not to burn any slash for the present and to forego entering the forests until absolutely necessary.

The forest fires up to the time of writing were not confined to any special district. They were general in every section of the province. Already millions of dollars' worth of timber have been

consumed by the flames still spreading in every direction, and reports of fresh outbreaks were pouring in to the Department of Lands and Forests. Five thousand men, including fifteen hundred government fire rangers were combating the blazes in all sections of the province. In the Abitibi district it had been found necessary to issue imperative orders to all settlers to cease burning slash in working their clearances.

In the Temiskaming district several fires were reported and extending, especially on the Rouge River. In the St. Maurice basin a big fire was reported at Lac Aux Sables, above the Gouin dam, making alarming progress, aided by strong gales of wind.

Fires were reported from almost every township in the Lake St. John district and along the mouth of the Saguenay River as well.

In the Metapedia district no improvement was reported but on the contrary the situation was growing worse with the firefighters unable to check the spreading flames eating their way in every direction.

The provincial governments of the Canadian confederation have had severe lessons in forest destruction during the last several years which should teach the respective administrations of public forest domain to organize a practical system of protection. The limit holders of the province of Quebec are much exercised over the losses made by the ravages of fire annually, which they say threatens the entire wood resources of the Dominion, if something practicable is not done by the provincial governments for their preservation.

Lumbermen Criticize Provincial Government

Quebec lumber operators interviewed, while not willing to express their opinions for publication, openly blame the government for the fires raging in every section of the province. They say that the limit holders contribute largely to protection against forest fires, not only in fire apparatus equipment but in fire ranger organization, only to have their efforts count for little or nothing on account of the government's failure to prosecute the violators of the law, rules and regulations governing the protection of forest properties. They claim that politics are allowed to interfere with the prosecution of offenders and cite a case of a man who had pleaded guilty to starting a forest fire, was let off with a fine of \$25 and later, through political influence, received the appointment as fire ranger.

Quebec lumber operators also complain that new settlers are permitted to burn their slash ad libitum, which is responsible for 95 per cent of the forest fires. They set fire to their slash in the work of clearing their lots, no matter how dry the season, and the results from flying sparks to set fire to and burn up the surrounding forest, and the danger of developing into a conflagration. These limit holders maintain that it is neither the hunters nor the fishermen who are responsible for the fires but the new settlers who should be prohibited from burning their slash. If the latter do not obey the law imposed on them by the government, punish them accordingly, not by a small fine but by imprisonment, and if a few examples were made in this direction, it would have the effect of arresting forest fires and the wood inheritance of the Canadian public.

Permits are too Easily Obtained

Referring to the permits given by the Department of Lands and Forests to people to enter the woods, the Quebec lumber operators are of the unanimous opinion that the present method is by no means efficacious for the reason of the source of distribution. They claim that the duty of granting these permits should devolve altogether on the fire rangers of the different sections in which they have charge, and they should shoulder the full responsibility.

The fire rangers should be placed in a position to know personally every man given a permit to enter the bush and his movements, in order that the ranger would be able to perform his duty properly. Up to the present time this is not the practice. Instead the cure of the nearest parish, the secretary of the municipal council and others domiciled in the vicinity of the forest section, have the right to issue permits with the result that the fire ranger at times does not know who is in the forests, and when he meets people whom he believes to be trespassers, they exhibit their passports of which he has had no previous knowledge.

The foregoing constitute some of the causes, the Quebec lumber operators declare, as being responsible for forest fires, and insist that the Government inaugurate a drastic code of laws and carry the same with a more perfect system for the protection of the forests against fire. They contend that until this is done, there will be forest fires which ultimately will wipe out the forest resources of the province, and with it the inheritance and rich assets of the Canadian people.

LUMBER TRADE CONDITIONS

Montreal Market Shows Slight Decline

Business in Montreal has fallen away to some extent and indicates that the great activity which lately characterized the market has received a slight check. As one wholesaler put it, "We have to scratch more persistently for the orders we secure." The slowing up mainly affects spruce for Americal buyers, and is no doubt partly accounted for by the postponement of building due to the high cost of construction. Some of the recent orders for shipment across the border are of the rush description. Wholesalers state that they have a considerable number of old orders at hand, and that they are busy filling these as promptly as possible.

Prices, on the whole, continue firm, although there are reports that on certain lines of spruce, the quotations have been slightly reduced. Advices from New Brunswick mills are to the effect that it is impossible to quote lower prices having regard to cost of manufacture. However, some of the small mills in the Province of Quebec are stated to be inclined to sell at prices a little lower than were recently demanded.

Montreal retailers have no heavy stocks. For months, they have, as a whole, declined to buy immediate needs. The memory of the way in which they were caught in the historical slump still clings, and they are not willing to take any undue risks by stocking up. This is a healthy condition, as it militates against over-buying although it entails a lot more work on the part of the wholesaler in that he has to sell more often and in much smaller quantities. The extension of building has resulted in a heavy trade for the local yards. The constructional programme is daily widening, and if there is no labor trouble (the carpenters have just made a wage compromise with the contractors) the Montreal district will have a record building year.

The spruce lath market is still easier. There is no longer the anxiety to buy which was prevalent recently, and this apathy combined with good supplies has resulted in a weaker position.

Business in B. C. forest products is moderate. The call for timber has declined.

The hardwood section shows signs of lessened activity, although certain lines of birch are hard to obtain.

A fair amount of lumber, including hardwoods, is being exported to the United Kingdom, some of it being for Irish account. A considerable quantity is being exported from the lower Quebec ports in tramps.

Quebec Exporters Making Increased Shipments

The Quebec lumber firms engaged in the export of timber and deals to the United Kingdom market, are looking forward to a successful year. Up to the middle of June, 75,000 cubic feet of timber and 1,500 standards of deals have been shipped, and the Quebec shippers gave out the statement that by June 30 the shipments from the port of Quebec will reach an approximate total of 150,000 cubic feet of timber and over 2,000 standards of sawn lumber. The two firms to ship the largest quantities are John Burstall & Co., timber merchants, and W. & J. Sharples Limited, who say the export trade to the United Kingdom this season of navigation on the St. Lawrence will be 50 per cent in advance of 1922 and 100 per cent better than 1921. Up to the middle of June nine ocean steamers loaded with lumber at the port of Quebec.

In the meantime cable inquiries from Great Britain have slowed down, but it is expected that the month of July will become more active on the British markets as all labor difficulties have been practically settled by agreement. The settlement of the Irish difficulties and the reorganization of the Free State Government to carry on a peaceful administration of the country is another element to encourage the commercial and industrial relations of the British Isles, which sooner or later will bear fruit to the lumber trade. From reports received by cable there may be looked for in Ireland a rejuvenation of the construction life which will prove to be a boon in the lumber business, and, as Ireland in the past imported largely her lumber supplies from Canada, the Canadian export trade is destined to receive large orders in the near future.

Discussing prospects for the summer of 1923, the Quebec agents of lumber firms in Great Britain in their latest reports, point out that the beginning of June in many respects has proven a turning point in the wood market and eliminating the possibility of political and financial events, the prospects for the balance of the year seem

more assured. The buyers who held out, especially in the inland sections of England, under the impression that they would have to pay more money for their goods of this season's shipment, and hoping that importers would have to give way in their c.i.f. quotations, have discovered their error in judgment as the consumption and increased demand have stabilized the market.

A factor, which is having an effect on prices, is the continual demand. Though not large, it is stronger than seemed probable when the French advanced into the Ruhr with the consequent dislocation of the French, Belgium and German exchanges. It is now, however, seen that France and Belgium can import sawn goods with the value of the franc at about one-third of the normal. France, according to reports, is making progress towards more stable conditions, and all those who expect to see some peaceful settlement of the reparations question, naturally look for a great expansion in the French trade with England in the near future.

Now that the dispute between Great Britain and Russia has been settled, the effect the settlement will have on the export of Russian wood to the British market will be watched with interest. It is estimated that huge quantities of sawn lumber and timber are ready for shipment from that country with its enormous forest resources and the outstanding question is how the flooding of the British market with Soviet Russian wood will affect prices.

The sawn lumber available for shipment from the White Sea ports amounts to 100,000 to 120,000 standards, together with other available shipments from Archangel, besides pulpwood and other forest products. While the prospects for 1924 are bright, there have been prepared 3,500,000 logs in the Archangel district, 75 per cent redwood and 25 per cent whitewood. These logs represent 175,000 standards, while in the Murinausk district there will be 500,000 logs, or altogether in the White Sea district 4,000,000 logs of an output. This does not include 200,000 logs at Petschova for export next season.

It is gathered from Russian official statistical sources that the cost of production has greatly increased, being 250 per cent more than in pre-war times on account of the slow machinery, and the Russians are looking forward to acquire newer up-to-date machinery, as well as the building of new mills by foreign capital interested in lumber operations in Russia.

In the meantime, it is reported that the Russians are keeping firm in their prices while the Finnish settlers are asking an advance as much as from 20 to 25 shillings per standard. This advance was demanded with the idea that diplomatic relations between Great Britain and Russia would not terminate happily, but there would be a breach between these two countries. The British importers, however, have expressed their determination to resist, and maintain that the Finnish shippers would find that they had made a mistake in judging the situation or had anticipated a rise in the market, but the English importers have made it plainly understood that they are not in a speculative mood.

The situation is such, however, that it calls for the attention of the Canadian shippers to the United Kingdom. There is no sentiment in English firms, ready to trade with the enemy, aliens and anywhere to the best advantage. This can be judged by the little space given by English trade journals to the Canadian lumber and timber trade, while their pages are replete with the activities of the trade in continental Europe.

Business in Ontario is Fair and Steady

There is not much change in the general market situation so far as lumber conditions are concerned. Various reports are received, some declaring that business, after the lull, has revived considerably, while others state that orders are still slow and there is a disposition on the part of customers to hold back in their purchases. Prices on the whole remain fairly firm and conditions, fundamentally, are sound. One wholesale lumber dealer declared that it was better that the lull should come at the present time than in the fall when everybody was looking for it. He felt that there would be a good steady trade from this out with the situation well in hand.

Spruce prices continue firm and the number of inquiries are increasing. White pine is having an active call while hemlock in the desirable sizes, is moving pretty freely. The recent hot weather and the provincial elections had a tendency to cause some falling off

“On Time” Delivery

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

Lumber Trade Conditions

(Continued from page 57)

in trade while the forest fires up north have created a deal of anxiety and tended to upset an even tenor in manufacturing circles.

There is one thing certain and that is, the cut in Ontario will not be as large this season as many anticipated. The mills got off to a late start owing to the long, cold spring, and water conditions were none too good on some of the drives. Then forest conflagrations and the scarcity of labor in some centres has tended to keep down production. Stocks in most mill yards are being moved out expeditiously, and during the coming month dry lumber will be available so that the shortages in certain widths and thicknesses can be replenished. Southern pine has shown a firmer tone during the last few days and this has tended to stabilize conditions.

While turnover in retail yards has been only fair due to the dealers' expectations that they can get lower prices if they only wait, there is a continued good call for lumber for general building purposes, and with the excellent crops in prospect, farmers are taking heart and rural trade should pick up appreciably within the next few months.

So far as hardwoods are concerned, most wholesalers and mills have quite a number of orders ahead which they are busy filling. The industrial demand is rather quiet but stocks are reported to be getting low and big consumers will have to enter the field before many weeks pass.

While there are a few pessimists, so far as the general outlook is concerned, the rank and file of the trade are confident in spirit and believe that the present quietness is only temporary. It has checked the trend that was rapidly developing for a runaway market and called a halt in speculative buying.

The lath market has weakened somewhat but prices on the whole are still satisfactory and there is a fair demand for the output of the mills.

Eastern representatives of B. C. mills report that the mixed carload trade is moderately active but the shingle market is away off at present and there is practically no fixed price for the product.

Furniture manufacturers are quiet and other consumers of hardwood are purchasing only limited quantities. Hardwood lumber dealers point out that the economic position of the industry does not warrant lower prices, and predict that when consumers decide to buy, as they expect that they will all about the same time, the market will quickly react towards higher levels.

While there is no marked disposition to undertake huge building projects at the present time, especially those for which there is no pressing need, there continues to be much interest in home-building and prospects are that such will continue in volume throughout the summer and fall months. Not a few stores are also being erected on the business streets in the larger centres. Hardwood flooring plants are busy and report an active demand for their product owing to the construction of so many dwellings and shops.

St. John Lumber Prices are Holding

There is not much change in the local market conditions and although the demand is light at the present time prices still hold. Sizes 2 x 10 and 3 x 9 have been bringing \$40 in some instances to local wholesalers, while refuse boards and deals are going at a top price of \$22.

While the demand for laths is off, the price still holds, producers receiving \$6.50 to \$7.00 according to the size.

The shingle demand is strong and the mills are busy replenishing their depleted supply. The only change noted in the price is for spruce shingles which are now being offered for \$3.25 instead of \$3.50. Cedar extras and cedar clears are still being sold for \$6.25 and \$5.25, while cedar 2nd. clears are selling for \$4.25.

Although the American market at the present time is quiet the English market is becoming stronger and as a result the situation is considered by no means out of the ordinary. Another feature of the British trade is that there is an apparent tendency for freights to decrease. This will mean a boost for the trade as the manufactured product will be landed at a more favorable figure and should prove a boon to conditions in general.

There has been a fairly good business for some local manufacturers through the State of Maine. The sizes in demand are 4 x 6, 6 x 8 and 4 x 8.

Private operators received good prices for their logs this year. The cut during the spring of 1922 was fairly large, but the demand at that time was away below what had been expected and as a result the prices for logs were particularly low. This season, however, the lumber business was brighter and the prices in many instances were more than double what were paid last season.

Predictions for a dull season were contained in a letter received by a local lumber shipper here recently from New York. The letter

explained that the recent boom had left many with quantities of lumber on their hands, which they had the choice of selling at sacrifice prices or storing in the hope for better opportunities in the future. According to the information given, the prices for soft woods had fallen off and was especially noticeable in the matter of laths. The writer also called attention to the fact that there was a shortage of eastern spruce lumber in New York.

While this letter had a trend towards pessimism this view is not held by local manufacturers and shippers as the opinion is generally expressed that the present lull will not be of long duration. Even if the market is dull at the present time it will have no direct effect of curtailment in the manufacture of lumber here.

Trade Has Slackened up in Ottawa Arena

Trading in the Ottawa lumber market during the closing period of June was slightly slower than during the opening part of the month and was not as good as during the month of May. Export business with the United States showed a falling off, and the number of orders and inquiries received from this direction was not as large as in the preceding months.

The domestic trade while it remained fairly steady was not as great as had been anticipated. Though hundreds of building permits have been issued so far this year, many of the proposed new undertakings are not being proceeded with. The high cost of labor, is generally given as one of the greatest factors in holding back the undertaking of several new building projects.

The Provincial election campaign and the hot weather also had their effects on the market, with the result that in several firms the same interest in the market was not shown, as had been exhibited earlier in the year.

Shipments on old orders continued to go forward steadily by rail and water. The spaces vacated by the dry stocks were usually quickly filled with new stock, showing that the manufacturers were attempting to equal, if they did not surpass last year's cut.

General conditions in regard to labor, transportation, and the drive, did not show any change. Conditions with the woodworking plants and factories also remained unchanged.

A new lumber company to be known as the D. Kemp Edwards Limited, which is backed by local capital, and which has several Ottawans as provisional directors, has been formed. The Ontario Official Gazette which announces the incorporation of the new company, places the capitalization at \$150,000.

The provisional directors are: David Kemp Edwards, Mamnett Phiney Hill, Alexander Christie Hill, Hugh Redford, Dale Harris, Sylwell Alevander and Valpy Martin.

The new company has taken over part of the plant and property of the estate of George M. Mason, including the planing mill which is situated on Bayswater Ave. The purchase of this property was contained in the list of May property transfers.

How Situation Across Border is Shaping

The present hesitancy on the part of buyers and distributors of lumber is entirely due to psychological conditions induced by the propaganda to discontinue building and not to fundamental ones. This hesitancy has resulted in some recessions in prices. Fundamental conditions within the industry are unchanged. Depletion continues. Building permits for this year to date show a substantial increase over last year. Permits are rarely issued until after contracts have been awarded, and there have been few reports of such contracts being cancelled, says Chas. S. Keith, of Kansas City, Mo.

The building permits for the month of May show substantial increases over May of last year, both in buildings and in dollars, the figures being

Month	Buildings	Estimated Cost
May, 1923,	80,618.....	\$267,355,888.00
May, 1922,	72,095.....	241,307,622.00

The permits for the first five months of this year compared with those of the first five months of 1922, and also with the total for 1920, were:

Period	Buildings	Estimated Cost
Five months 1923,	314,827.....	\$1,430,609,518.00
" " 1922,	262,579.....	1,000,930,246.00
Twelve " 1920,	411,026.....	1,467,911,559.00

Labor is generally employed throughout the entire United States in all industries. The program of building started this year would have required at least 1,250,000 more men in the building trades than are engaged therein. This situation has resulted in enhancing the cost of labor, reducing the efficiency of labor, and increasing the cost of construction. It is probable that we will not continue throughout the balance of the year with the ratio of building permits we have had during the first five months, but even in face of this fact, the total amount of building this year will at least equal 1922, if not exceed it.

Don't pay fancy prices for your provisions

"Good goods and fair prices" is the principal upon which Eckardt service has always based its appeal to the lumber trade. We have no fancy prices but we have got the highest quality goods as a trial order would prove.

Why not check off your requirements from the following list, and let us show what we can do for you?

Tea, coffee, figs, prunes, pickles, peas, beans, raisins, molasses, sugar, canned goods.

"Superior" Automatic Bolter

The Superior Automatic Bolter was designed and built especially for Fraser Co's. Ltd., for use in their lath mills.

A feature of this machine is its simplicity, great strength and enormous capacity for hard, continuous work. It will make from 12 to 15 cuts per minute and is ideal for sawing mining lath, bolting round wood for house lath, or bolting white birch for spool bars. The hand lever on the side gives the operator full control of the machine

at all times, as to stopping and starting, either forward or backward. A small dog holds the control lever in the stop position.

Prices and full particulars may be obtained by writing—

Fredericton - New Brunswick

Lumber Business Good in Sarnia District

There has been quite an advance in the better grades of white pine in the Sarnia district, while the low grades are holding quite steady. Business throughout that section has been very good and a great deal of building is going on.

The plant of the Cleveland-Sarnia Sawmills Co., Limited, at Sarnia, is operating to capacity. W. A. Saurwein, assistant manager of the company, in a recent interview with the "Canada Lumberman," said that the company felt optimistic about all forest products, and do not look for any great change in the near future, as

W. A. Saurwein, Sarnia, Ont.

far as white pine, which is their principal product, is concerned. Mr. Saurwein added that there seemed to be a lively requisition for the better class of white pine in the United States and a large proportion of the firm's shipments of this quality goes to that market.

The Cleveland-Sarnia Sawmills Co. have been shipping some of this year's cut in the better grades and the dealers have been taking it and sticking it up in their own yards to dry rather than take a chance on the company not having lumber when the retailers require it.

British Columbia Export Trade Keeps Up

The British Columbia lumber market has not quieted, with the exception of one week in May, for more than a year. When New York builders decided to follow the dictates of their financial heads and curtail construction programmes because labor costs were too high, there was a short reaction in the West, more for fear of what might happen than from what actually happened.

There were some cancellations, but almost as soon as the New York and Atlantic seaboard went off the market, Japan arrived.

The cutting is not in the same class, but the prices are good and the lumbermen, while anticipating an accumulation of side lumber, until building activities are resumed in the east and in mid-continent markets are delighted with the prospects of doing foreign business again.

Nearly 4,000,000 feet of Jap squares were placed in the market recently, and as the steamship companies refuse to accept shipments of large squares without a certain percentage of baby squares for stowage, the mill have been forced to accept cutting in the smaller fractional grades and classes, while buyers and shipping men are delighted.

Hemlock log companies are also pleased with the new conditions as there is a good demand for hemlock baby squares. Hemlock logs are lower in prices than fir and the mills find this profitable cutting when fitted in with big squares. Mills in British Columbia have been fortunate recently as they received from \$2 to \$3 more than the American mills for the same class of cutting for Japan.

Fires Deal Heavy Blow to N.B. Forests

During the last two weeks the forest wealth of New Brunswick has been struck a death blow. The fire fiend is at large and millions of dollars worth of the finest timber lands have been laid waste and the end is not in sight. Such is the situation at the time of writing. Since the last edition of the Canada Lumberman over 250 square miles of timberlands were burned over in the northern section of the

province and the conflagration reached proportions beyond any similar disaster in the history of this province since the great Miramichi fire of 1825. Fanned by continuous strong winds the flames swept through the wooded areas in defiance of all human efforts and the wooded wealth soon disappeared and in place of the stalwart spruce, cedar, birch and hemlock, all that remained was the charred stumps and smouldering ruins. The richest forest areas in New Brunswick fell a prey to the flames and aside from the monetary loss estimated at \$5,000,000 the province has been struck a blow, which will take years to recover.

When the month of May passed without any fire of serious proportion the officials of the Department of Lands and Mines felt gratified that their efforts to prevent forest fires were bearing fruit and that the additional expense incurred with regards to the enforcement of the act and for precautionary measures had been well worth while. But like a bolt from the sky came the end of their dreams. Reports of serious conflagrations ravaging forest areas began to pour in and in a couple of days the fires had assumed proportions which defied every human effort. Everything that man could do to save the great timber proved unavailing and in the end the noble bands of fighters had to step back and wait for providence to take a hand. Unable to do anything to stop the "destructive demon" efforts were concentrated upon putting down the smaller fires and fighting the larger ones from the flanks.

The fires covered an appalling area. In Restigouche County, at St. Quentin, Kedgewick, Northwest Upsalquitch, down the Little Tobique to the Victoria County line, at Silverbrook west of Nepisiguit River, White's brook at Balmoral, Bald Mountail, along the Jardine and Five Fingers streams across the west branch of the Salmon river to the Tobique river.

In addition there have been the losses in the destruction of mills, houses, barns and various other buildings as well as several highway bridges and crops in many settlements.

It will take some time after the fires have either burned themselves out or have been extinguished by rain before the truth of the appalling loss can be ascertained. In the meantime the one hope is for rain. Reports from all over the country are alarming and the intervention of providence is eagerly awaited not only by those, who are directly suffering from the fires, but by citizens in every walk of life who realize what the loss means to the province.

On June 18 Hon. C. W. Robinson, Minister of Lands and Mines, ordered the cancellation of all forest travel certificates in Restigouche, Madawaska, Gloucester, Northumberland, Kent, York, Carlton and Victoria counties and issued instructions to fire wardens for the instant arrest of any violators of the regulations.

Plans for re-seeding the burned area owned by the New Brunswick Railway Company and keeping their lands in forests under a perpetual arrangement, are being made. The company owns 1,600,000 acres of forest lands in New Brunswick and has suffered severe losses during the last two weeks. A decision not to turn the burnt area of the company over for agricultural purposes was reached at a recent meeting.

One of the worst features of the present situation is that some of the fires evidently had been deliberately set. Others show that farmers burning slash caused a great portion of the damage and when conditions resume a somewhat normal aspect these men will be ferreted out and an effort made to punish them as they so justly deserve.

At St. Quentin before a local magistrate one resident was sent to jail for two month having been found guilty with setting a fire in violation to the law. Numerous informations have been laid in other sections of the province and prosecutions will follow as soon as the fire situation will permit.

Late reports from some sections indicate that some headway was being made in the big fight, but on the whole the situation would remain serious until heavy rains would fall as the fire has burnt so deep that human efforts avail little. Chief Forester G. H. Prince, has received word that along Silver Brook, a tributary on the south side of the Nepisiguit River, four miles had been burned over, but was being brought under control. On the north side of the Nepisiguit the fire was advancing rapidly and large crews of men were being rushed there.

Damage estimated at \$18,000 resulted from a fire which broke out in Willow Grove, St. John County recently. Sawn lumber, the property of McIntyre & Johnson and consisting of 400,000 feet of boards, and 250,000 lath also was destroyed. This fire was extinguished.

One prominent lumberman said that conditions in the woods of many sections of the province are in a complex state. He explained that in the shaded recesses of the forest snow-banks and icy glades still dampened and chilled the air, while right nearby the floor of the woods were veritable chaff and tinder an easy prey to the slightest ignition.

Large Contract for Creosoting Ties

The Temiskaming & Northern Ontario Railway has entered into a contract whereby an English firm, Calder & Company, of London, England, is awarded the contract for creosoting ties for the government railway. Chairman Lee of the T. & N. O. announced that the Ontario commission had entered into a joint arrangement with the Canadian National Railways in making a contract with the English firm. The T. & N. O. will require 200,000 ties creosoted a year. The English concern is establishing a big creosoting plant at Cochrane and at other railway points in Ontario to do the work.

Mr. Lee says that by July, 1925 the T. & N. O. Railway will be to James Bay. There are 45 miles completed north of Cochrane, and by the fall 70 miles north of that town will be finished.

The new line will tap a country that is rich in pulpwood and will open up new areas of supply. It is also expected that several pulp and paper mills will be established along the new route.

Mr. Patmore Active in Masonic Work

D. C. Patmore, chief engineer of the E. Long Mfg. Co., Limited, manufacturers of sawmill machinery, Orillia, Ont., took a prominent part recently in a representative gathering of Royal Arch Masons, at Meaford, where a chapter of instruction was conducted and grand lodge officers greeted. Among those in attendance were R. H. Spencer, of Trenton, Grand Z.

The gathering was under the direction of D. C. Patmore, of Orillia, who is Grand Superintendent, Royal Arch Masons, for Georgian Bay district. He was assisted by several Past Grand Superintendents. Mr. Patmore stated that the large influx of members in the Georgian Bay district was giving those in authority some concern, and the gathering was part of a programme adopted by which it is hoped that sufficient individual attention will be given each new member to ensure that the ancient high traditions of the craft may be maintained.

The assembly at Meaford was one of the most outstanding capilar events in the Masonic history of the district.

Chief Forester Speaks on Quebec Fires

G. C. Piche, superintendent of the Forestry Branch of the Quebec Department of Lands and Forests, feels pessimistic over the forest fires raging in the entire forest regions of the province. In an interview he said he anticipated this season would be fraught with fire menace unless the greatest precaution was taken by co-operation on the part of the settlers, fishermen and other woods visitors, causing terrible loss. Compared with last year and the reports of railroad officials, the conditions are very serious though the danger started late in the season and instructions issued to all employers to co-operate with the forest rangers by every possible means, with the result that all railroads are patrolled and instructions given passenger train conductors to guard against passengers throwing lighted cigarette and cigar butts from the trains.

"The fires in the various sections of the province are becoming dangerous, according to the latest reports," said Mr. Piche, "and the government is considering the closing of all forests to everybody except the fire-fighting forces, until such time as the fires have all been extinguished."

Rains Worth Millions to Timber Industry

Recent rains which have been general throughout the province have been worth millions of dollars to British Columbia's timber industries, Chief Forester P. Z. Caverhill stated recently.

During the first part of May the fact that forest fires exceeded in number the fires reported during the corresponding period of the previous year gave rise to considerable worry on the part of forest officials. They began to wonder whether the 1923 fire record would exceed that of last year when all records for losses were exceeded and the cost of timber burnt and other destruction was placed at \$23,000,000.

"It looks now as though we will have a normal year so far as fires are concerned," Mr. Caverhill said. "The situation throughout the province is satisfactory."

Lumbermen Estimate Loss at Four Millions

Lumbermen place the monetary loss suffered so far in the destruction by forest fires which have burned over more than 250 square miles in New Brunswick during the last two weeks, at not less than \$4,000,000.

These figures were reached by a valuation basis on an average of twenty-five dollars to the acre on approximately 160,000 acres.

In addition there have been the losses in destruction of mills, houses, barns and various other buildings, as well as several highway bridges and crops in some settlements.

Northern Ontario Towns Want Fire Belts

The attention of the Ontario Government is to be drawn to the great danger to the towns of Northern Ontario from fires, according to the terms of a resolution prepared at the regular meeting of Timiskaming and Northern Ontario Associated Boards of Trade.

The resolution states that while the Boards recognize that the Government officials have done a great deal to reduce fire hazard, and had to discontinue the work for lack of funds, it is urged that the task of removing the fire menace from towns of the North, "rather than create a fire fund to relieve misery and destitution after some of these towns are wiped out," should be resumed.

Miner Lumber Company's Mill Sold

On June 20, U. H. Dandurand, Ltd., Montreal, sold by auction the sawmill and timber limits of the Miner Lumber Co. Ltd., of Montreal. The property was knocked down to B. Quinn & Co., of Windsor Mills, Que. The limits consist of 15 miles of leasehold lands and about three miles of freehold lands, situated near Rawdon, Montcalm County, P.Q. The limits have only been worked one year. The sawmill is on the Lac Oureau River, Rawdon village. This mill is practically a new structure, and replaced one that was burned down; it is equipped to saw lumber, manufacture spoolwood, and ross pulpwood. The site consists of five acres, and in addition to the mill proper, office buildings, barn, blacksmith shop, oil house, concrete boiler house, and engine and pump house are located on the property.

Mr. McFadden Secures More Limits

J. J. McFadden, Limited, of Spragge, Ont., were the successful bidders for a timber berth of 36 square miles in the Mississauga forest reserve. The limit is known as Berth 1E, and, while not a large one, is one of the largest which the Department of Lands and Forests has disposed of for some time. J. J. McFadden, deposited a marked cheque of \$25,000 along with their bid and must remove the timber from their new holdings by April 30, 1929.

The prices which the company have agreed to pay are: Red and white pine, \$8.50 per thousand feet; jack pine, \$4.50 per thousand feet; other timber, \$3.50 per thousand feet; cedar posts, 7 cents each; ties, 20 cents each; spruce pulp, \$1.55 per cord; other pulp, 90 cents per cord; cedar poles 30 feet and less, 50 cents; cedar poles, 31 to 40 feet, \$1.00; cedar poles, 41 to 50 feet, \$1.50; cedar poles, over 50 feet, \$2.00. Crown dues at the usual rates are, in each case, included.

Octogenarian Runs His Own Sawmill

Charles Taylor, of Bronte, Ont., is still active in the lumber game although he has attained the advanced age of 80 years. Many visitors who travel over the Toronto-Hamilton highway, have noticed a weather beaten sawmill which has been a landmark in that section for years. Mr. Taylor has owned the property for over 30 years and the mill itself was built 50 years ago by Wm. McCraney who was a former Member of Parliament for the County of Halton. At one time the plant turned out about 10,000 feet of lumber a day but now production is much smaller owing to the logs being of much smaller diameter. The mill for a long period supplied a great deal of the material used in boat building in the district. Mr. Taylor is also a skilled wood carver, and a carving by him of the Lord's Prayer evidences very artistic handicraft.

New Handbook on Kiln Drying

Preventable losses in seasoning lumber total around \$50,000,000 every year, according to the Forest Service, United States Department of Agriculture, which announces a new handbook on kiln drying prepared by Rolf Thelen of the Forest Products Laboratory at Madison, Wis.

Fundamental facts about the drying of wood which a kiln owner or operator must know in order to get the most satisfactory results with his kilns are presented in the booklet, together with information concerning different types of kilns, instruments, and apparatus employed in kiln drying.

The handbook contains 24 illustrations and a series of drawings showing types of kilns. The information presented is based on experiments conducted at the Forest Products Laboratory.

A man may be able to trade his reputation for money, but he can't trade back.

Edgings

The E. C. Plant Lumber Co., Limited, was removed from the Drummond Building to 616 Canada Cement Building, Montreal.

Lamont Bros. are building a new sawmill at Harrison Lake, B. C., where they already operate a shingle mill.

The Kootenay Lumber Co., are now sawing at Wasa, B. C. Their mill is one of the best equipped in the section and is running to capacity.

After having moved their complete plant and equipment to Prince George, B. C., from Cranbrook, the Crangbrook Sawmills, Ltd., operating a new mill at Otway, commenced cutting recently for the market.

The Canadian Sawdust Co., Des Erables St., Montreal, recently suffered a \$15,000 fire loss to its plant building. The loss was partly covered by insurance. The firm is undecided about rebuilding.

The sawmill of Arthur Lessard, Ste. Ursule, P. Q., was destroyed by fire recently entailing a total loss to buildings and contents of \$15,000. The owner expects to rebuild this summer.

Fire recently destroyed the sawmill of the Fraser Lumber Co., Eastcourt, P. Q. The loss is estimated at \$12,000. The owners expect to rebuild.

Two sawmills belonging to the Sully Lumber Co., Sully, P. Q., were destroyed by fire recently entailing a loss of \$8,000. The company expect to rebuild.

Fire destroyed the sash and door factory of C. Thibault at St. Simon, P. Q., recently. The loss is estimated at \$5,000. The owner will probably rebuild.

Premier Paper & Pulp Co., 91 Hollis St., Halifax, N. S., are preparing plans for the erection of a \$2,000,000 paper mill at Hartsville, N. S. Work will probably start this summer.

Monks & Company, Limited, Montreal, have been granted a federal charter to manufacture and deal in lumber, pulpwood and paper. Capital \$25,000.

Owing to the heavy, growing demand for newsprint, the Belgo Canadian Paper Company is increasing its capacity from 90,000 tons per annum to 115,000 tons per annum. This company has been in continuous successful operation for twenty years.

The Western Quebec Paper Mill, Limited, 511 St. Catherine St. W., Montreal, have awarded a contract for the construction of a tissue mill at St. Andrews, P. Q. The new mill will have a capacity of five tons per day.

Messrs. Skates, Woodworth and Buell, of the Woodstock Lumber Co., Boston, Mass., spent a few days recently in Chatham, N. B., inspecting stocks of lumber. The J. B. Snowball Co., is milling a large quantity of lumber which the Woodstock Lumber Co. recently purchased.

An aggregate of American capital represented by W. H. Elfedahl, William Edris, C. P. Nutler and H. G. Seaborne of Seattle, is negotiating for the purchase of the largest single block of timber left in the Cowichan Lake Belt, which is the heaviest forested timber belt on the Pacific Coast. This is Block 75, situated on the Gordon river. It is now held by the British-American Timber Co.

Prosperity in the lumber industry of British Columbia will probably last for a long time, T. J. Humbird, president of the Victoria Lumber & Manufacturing company and executive of the Weyerhaeuser company, stated recently in Victoria. During the next few years he predicted Vancouver Island timber resources will be developed to an extent never approached before.

The Royal Oak Lumber Co., Royal Oak, Burnaby, B. C., has changed hands. The new proprietors are Charles Garrett and Robert McDonald. Mr. Garrett has been in the retail business since 1912 and has enjoyed an extensive patronage in the municipality of Burnaby. Mr. McDonald was in charge of operations at the Garrett shingle mill in South Westminster, which was recently burned.

A contract has been awarded to start work on the concrete dam and paper mill at Brook Junction, Newfoundland. The William I. Bishop Co., Limited, 10 Cathcart St., Montreal, are the general contractors and the organization behind the large pulp and paper enterprise is the Armstrong-Whitworth Co., Limited, whose Canadian headquarters are at 511 St. Catherine St. West, Montreal. The dam will be 1,080 feet long and 75 feet high.

The Strathcona Paper Co., Limited, of Strathcona, Ont., say that the demand for sheathing and building paper at the present time is good in view of the active construction work in the larger

centres of population. The company are running both its machines full time and intend to install another boiler in the near future so that they will have more steam capacity and be able to increase their output. They will also erect a good-sized stock room for their raw material.

The sawmill and lumber stock of the Lake Lumber Co., at Qualicum Beach, Vancouver, Island, was recently destroyed by fire. The loss was \$50,000. This company formerly operated in the Fraser Valley, having at one time a mill at the Salmon River and another at Beaver river. In 1918 the Qualicum Beach mill was built. H. G. Johnston is manager, and his partner was Stanley Johnston, who was killed when the mill was being built.

Fire recently visited a pulpwood pile of the Bay Sulphite Co., at Port Alfred, Que., and while for a time the flames were serious, still by good work on the part of the fire fighters, the blaze was wiped out after destroying 12,000 cords of last year's pulpwood. The loss is fully covered by insurance. The operations of the mill will not be interfered with as the company have an ample supply of logs in the river and bay to meet all requirements.

The financial year of several paper companies closes on June 30th and it is expected that the showing will be an exceptionally strong one. The mills have been getting a greater price for their product during the past six months than they did during the first six months of 1922. The demand has been steady and pulpwood secured at a considerably less figure. Conditions on the whole are very favorable for the future.

The directors of the St. Maurice Paper Co. at a meeting held recently in Montreal, placed the stock on a 6 per cent basis by declaring $1\frac{1}{2}$ per cent for the forthcoming quarterly distribution. The rate for some time back has been 5 per cent. The point of chief interest in connection with this change is the bearing it may have, if any, on the negotiations which have been in progress between that company and Laurentide looking to a union of their interests.

Forest fires have wrought great havoc in the province of Quebec and the losses sustained are very heavy. G. C. Piche, chief forester for the province, says that an area of 400,000 acres has been visited by the flames and the damage has reached several million dollars. In some regions the situation is simply terrible for settlers. 125 farms were burned, 15 sawmills, 20 large summer camps, 4 railway stations and 2 log haulers. Several small villages in Temiscouata were left a mass of ruins and several parishes also suffered severe loss.

There is a report again connecting the name of Mr. G. M. McKee formerly general manager Donnacona Paper Co. Donnacona, Que., with the Riordon Company. It is understood that the bondholders in Boston, who have a very strong influence by reason of their large interests, are urging that Mr. McKee be induced to join the Riordon Company as general manager and that a newsprint mill be included in the reorganization plan. Mr. McKee was previously asked to take a hand in Riordon affairs but declined on the ground that the general position had not been defined. A reorganization would place matters on a different basis. The company this year are manufacturing a very large cut of lumber.

William Hanna passed away recently from a stroke of paralysis at his home in New Westminster. He was well-known in lumber circles in British Columbia and was for many years superintendent of the Brunette Sawmill camps. For a considerable period, he had been operating a camp of his own at Harrison Lake. Mr. Hanna, who was born in Haldimand County, Ont., was 53 years of age and had been residing in New Westminster for 35 years. One daughter and two sons survive.

Six separate groups of financiers are negotiating with the British Columbia Provincial Government for the establishment of pulp and paper mills in that province, according to an announcement recently made by Hon. T. D. Pattullo, Minister of Lands for British Columbia. "It takes about \$10,000,000 to get one of these concerns going and the details take time to arrange, but I am confident that two or three of them will be under way in a short time now," he said. "One of them is the Chicago and San Francisco group with which the Bridge River Power Company has been negotiating," and the government is doing everything possible to assist.

The Abitibi Power & Paper Co. are erecting a large extension to their wood room at Iroquois Falls, Ont. The addition is being built of concrete and steel and will be two storeys high. On the top floor are the knife barkers, chippers, splitter and four-foot slasher. Below are the chip screens and the bark presses. In the old room will be installed eight drum-barkers, four of them additional equipment. These will give ample barking capacity even when all dry wood is being handled. There are two water tanks. Frozen wood goes first into a tank of warm water, about 160 degrees before it goes to the drums. After leaving the drums it goes into another tank in the lower floor.

Regeneration of Canadian Forests

Successful Regeneration of balsam and spruce under cover of old hardwoods. This area was cut seven years ago removing all soft woods with the exception of a few healthy spruce seed trees near by. There are now 1000 to 3000 young spruce and balsam growing per acre.

Will Sawdust be Converted into Fuel?

Is the Millennium, so far as the economical use of sawmill waste is concerned, at hand? Is Canada's solution of the fuel problem to be made right at home? Have long years been spent in a fruitless effort to market profitably sawdust, and a great opportunity been neglected or overlooked for several decades? It would seem so, as the House of Commons Committee on Mines and Minerals, when meeting at Ottawa recently, heard of a process of employing sawmill waste which bids fair to solve the fuel question.

The proposition, together with samples of the product and an engineer's affidavit that the resulting fuel was better than soft coal and as good as anthracite in steam tests, came from Richard Grant, a former Canadian, now living in Havana, Cuba, who wrote Hon. Arthur Meighen. The samples of fuel submitted were examined by the committee, whose members professed deep interest in the process and visualization of sawdust piles, which have long proved a source of annoyance, vexation and expense to lumber operators, being converted into "dusky diamonds."

The committee will have the fuel tested by experts in the service of the Federal Government and will follow up the process to see if it is commercially feasible.

Summer Logging in New Brunswick

If conditions return to normal logging operations are to be carried on during the summer months in several parts of this province, although in the past it has been customary to cut the logs and haul them during the winter months. During the season recently closed the heavy snow in the southern sections made it necessary

to curtail the cut and many operators found themselves without sufficient logs to keep their mills running during the summer. In order to supply their wants it was decided to send logging crews into the woods. It is contended that with modern appliances now available logs can be handled better in the summer than in the winter in many sections. The trees can be cut close down to the roots as there is no snow to handicap operations.

More Timber Limits Sold By Auction

An auction sale was held recently by U. H. Dandurand, at his auction rooms, 101 Notre Dame Street west, Montreal, of 18 square miles of timber limits at Rawdon, Que., placed on sale by the W. H. Miner Lumber Company. There was a large attendance of lumber men, and for a time the bidding was spirited, although no one seemed anxious to run the price up. Eventually the limits were secured by R. Quinn and Company, Registered, of Windsor, Que., for \$15,150, which was considered a fairly low price for so extensive a property.

New Bulletin of Much Interest

The Canadian Ingersoll-Rand Co., Limited, Montreal, Que., have just issued a new descriptive bulletin covering their Cameron double suction, volute centrifugal pumps. The illustrations are numerous and clearly set forth the special features of these pumps, while the text contains much useful information on the mechanical details, tests, dimension table and part list. The book is known as No. 7350-C, and will be gladly forwarded to any interested reader on application.

Edgings

Ryley & Son, Gainsford, Man., lumber dealers, have been declared bankrupt.

National Lumber Yards, Ltd., Beausejour, Man., recently suffered a considerable fire loss. The property was insured.

The lumber yard and contents of Thomas Gill of Burnaby Bay, N. B., was recently destroyed by fire. No insurance was carried.

McDonald & Vasher, Bruce Mines, Ont., manufacturers and dealers of timber, have discontinued business.

A Co-partnership has been formed under the name of Dunbar Lumber Co., Edmundston, N. B. The principals are A., J., D., R., D., and T. Dunbar.

The Imperial Lumber yards have closed down their yard in Dumas, Sask., and the stock is being divided between their yards at Wawota and Kennedy.

S. Bick, formerly with the Bennett Lumber Company, Limited, Montreal, has commenced business in Memphis, Tenn., specializing in hardwoods, domestic and export.

St. Lawrence Coal Co., Ltd. Montreal, is a new firm recently organized to deal in lumber shingles and other wood materials. Capital \$100,000.

Bridgewater Lumber Co., Limited, P.Q., was recently formed to manufacture and deal in lumber, pulpwood, shingles and all kinds of wood products. Capital \$100,000.

Harry Johnston, formerly of Fergus, Ont., who has been in British Columbia for the past two years, has been appointed buyer and inspector for the Apex Lumber Co., of Vancouver.

H. R. Blackwell, who for the past three years has been manager of the Community Lumber Co., at Vernon, B. C., left recently for the Coast where he will make his home in future.

R. B. Herron, Limited, Toronto, was recently granted a provincial charter to manufacture and deal in lumber and wood products. Capital \$50,000.

The Star Lumber Co. Limited, St. Joseph de Beauce, P. Q., is a new company with a capital of \$20,000 recently formed to deal in all kinds of forest products.

Paquin & Secard, Limitee, Lotbiniere, P. Q., have been granted provincial incorporation to operate lumber camps, sawmills, build wharves and other constructions. Capital \$20,000.

Blais & Frere, lumber dealers Cap De La Madeleine, P. Q., are about to start work on a new dry kiln at a cost of \$2,500. The building will be 14 x 20 feet and will be of solid brick construction.

The Brunette Lumber Co., New Westminster, B. C., will start at once on a new dry kiln, boilerhouse and powerhouse at their Brunette mills. The new units will cost \$15,300.

The new mill of the Brunette Sawmills Co. at New Westminster, B. C., will be ready to start sawing about September 1st. When completed it will have a cutting capacity of some 300,000 feet a day.

Henry Atkinson, Limited, Saint Telesphore, P. Q., was recently organized to take over the business of the late Henry Atkinson and to manufacture and deal in pulpwood and lumber products. Capital \$750,000.

Fire recently destroyed two sawmills at Lac Long, P. Q., belonging to P. Bonenfant and A. Luasse. The loss on the building is about \$10,000 and on the material consumed about \$75,000. The owners expect to rebuild.

A timber tract, 4,160 acres in extent, containing 150,000,000 feet of timber on Sunderland Inlet, 160 miles north of Vancouver, B. C., has been sold to Patrick McCoy, of Seattle. The purchase price is said to have been more than a quarter of a million dollars.

Kenneth L. Golding, of the Bonney River Lumber Co., St. John, N. B., was married recently to Miss Kathleen S. Fisher, daughter of Mr. and Mrs. George Fisher, of Chatham, N. B. Mr. Golding and bride have taken up residence in St. John, and many friends will wish them every prosperity and happiness.

The financial year of the Laurentide Company, of Grand Mere, Que., which ends on June 30th, will show a considerable advance in the gross and net earnings of the company as compared with last year. The company has had the advantage of their wood supplies taken in at a much lower figure than in the previous year. In addition, there was an increase in the selling price of newsprint for half of 1923, and further an increase in production.

Price Bros. & Co., Quebec, Que., say they are operating five

lumber mills at full capacity during the present season and expect to produce about 65,000,000 feet of sawn lumber besides lath and shingles. Market conditions have been good although prices are not as high as they might be. The company have disposed of their entire production for the coming season. They report that labor is plentiful and wages normal.

In 1920 there were cut, in Canadian forests, 4,024,826 cords of pulpwood. This wood, if piled four feet high and four feet wide, would reach in a continuous line over 6,000 miles, or the distance from Vancouver to Halifax and out over the Atlantic to Queenstown, Ireland.

Timber interests have been petitioning for better booming facilities for many years at Squamish, B. C., and the Provincial Government will establish permanent booming grounds there, according to an announcement made by Premier Oliver, calling a meeting of the directors of the Pacific Great Eastern Railway. Engineers will prepare plans and it is expected that lumbermen will have ample booming facilities at Squamish in the near future.

Longfield Bros., Mount Brydges, Ont., recently completed a very handsome home for a leading resident. The firm, who advertise that they are specialists in house furnishings and built-in furniture made the plans, furnished and completed the material in the wood-working line and also made the interior trim, stairs, French doors, cabinets, sash and frames of this desirable dwelling. The interior trim is of chestnut, birch panels and quarter cut oak floors.

The lumber situation on the Pacific Coast remains about the same, with many orders on the books for export business. Building in the city of Vancouver is rushed forward and, generally speaking, the South Western part of British Columbia is in a sound and healthy condition. The Atlantic Seaboard business has undoubtedly come to stay, and the manufacturers are feeling for the first time in many years that their market for commons will be fairly regular and consistent.

As stated in our last issue, the Western lumbermen are strongly opposed to the new sales tax. The B. C. Wholesalers' Lumber and Shingle Association has further defined its position, which is that the tax to remain as it is or in the alternative six per cent to be paid by the mill and not to be shown on the mill invoices, but if so shown, that wholesalers be compelled to also show the 6 per cent on their invoices and be definitely authorized by the Act to collect the same.

E. J. Zavitz, provincial forester, stated recently that he was trying to arrange a survey by areoplones of the area around Timmins, Ont., in which a number of small fires were reported. He believed that the district south and west of Timmins, which had been well cleared of lumber, might be considered safe, and Timmins itself seemed reasonably well protected. Mr. Zavitz admitted that if a strong wind developed it would be hard to say what might happen south.

If Canada cuts off the exportation to United States of pulpwood, Congress will be asked by the American Pulp and Paper Mill Superintendents' Association to retaliate by placing export duties on coal and other commodities obtained by Canada from the United States, according to resolutions adopted in the closing session of the international convention of the association held recently at Springfield, Mass. William A. Anderson, of St. Catharines, Ont., was elected a vice-president.

The industrial department of the C.P.R., with which the Board of Trade of Sault Ste. Marie, Ont., has been in correspondence from time to time, has advised the board that a lumbering concern in the Southern States desired to locate somewhere in Canada, and G. W. Curtis, industrial commissioner of the C.P.R., has advised them to come somewhere along the Soo branch. Secretary Wolfe has written the concern, pointing out the advantages of establishing here. The company figures on employing 150 men and cutting thirty thousand feet of logs per day.

Some interesting rumors are afloat in regard to the reorganization of the Riordon Company. Preliminary difficulties have been surmounted and good progress made. Nothing has been made public yet in reference to the plans of the Canadian interests who are attempting the reorganization. It has been necessary to get assurance of a good deal of financial support before any public offerings could be made of the new securities that are to be issued or even an offering of those made to the shareholders. It is understood that it has to some extent been a fight to keep control of the Riordon interests in Canada. It is stated that Sir William Price, head of Price Bros. Co., of Quebec, may become a director of the Riordon Company. To what extent Price Bros. Company's interests will enter into the combination, however, can not be ascertained, but reports of all kinds are heard. Another rumor is that Lord Rothermere, brother of the late Lord Northcliffe, London, England may also become an important factor in the reorganization of the Riordon Company.

POWER!

The "Caterpillar"® Logger has no equal for power, sure traction, rugged endurance, and low cost of operation. Its design and construction are the result of Holt's long experience and exact knowledge of all the different conditions and requirements encountered in hauling logs and pulpwood over snow and ice roads, and all other conditions in Northern lumbering.

The "Caterpillar's" record for actual accomplishment is of vital interest to every Northern lumber and pulpwood manufacturer. On the operations of The Abitibi Power & Paper Company, The Mount Murray Woodlands Corporation, The Anglo-Newfoundland Development Company, The Great Northern Paper Company, and many others, the "Caterpillar" Logger has proved its ability to continuously haul heavier loads and at lower cost than can be hauled by any other machine or method.

The Anglo-Newfoundland Development Company, Grand Falls, Newfoundland, say—

"Your Mr. Davis is about to return after being with us during the winter months in charge of our 2 "Caterpillar" Tractors, and I am unable to let him go without a few lines thanking you for sending a type of man such as Mr. Davis.

"No doubt he has reported to you the very successful tractor operations just finished in which we hauled 11,000 cords with our 2 "Caterpillars", and with only a ¾ hour holdup for any trouble from December 19, 1922, to April 14, 1923. Our tractors averaged 15 hours per day, and we only lost 1 day, Sundays included, because of bad weather.

"On one trip over a snow and plowed road, the "Caterpillar" Logger hauled 9 sets of sleds containing 57 cords and 1 cord horns. The "Caterpillar" pulled the load over 4 miles without any help, took all the curves, and tracked very well, time 2.15 hours, and kept back all loads going down grade. Total weight 130 tons including sleds."

The latest "Caterpillar" Logger contains new features of strength and operating convenience, making it farther in the lead than ever before. Our unequalled service facilities are at the instant command of every Canadian owner. Investigate the "Caterpillar" Logger now and plan for your 1923-1924 operations.

Urgent Precautions Against Fire

Officials of the Forest Service Branch of the Department of Lands and Mines of New Brunswick are urging that every precaution be observed to prevent a forest conflagration similar to that of the Miramichi Fire. A carelessly thrown match, cigaret or cigar butt, or live ashes from a pipe may become the cause of a blaze which will sweep the province in its present critical state of drought. Recent fires originating in York County have shown the rapidity with which a blaze will spread, contrary to the general impression that central and southern New Brunswick has been exempted from the same conditions of dryness prevailing in the locality of the most serious fires in the northern portion of the province. At Mactaquack, fire fighters summoned to extinguish a blaze which spread over a mile in an hour, discovered a bait can full of live worms and two fishing rods which had been abandoned in haste. It is believed that this fire spread so rapidly from careless smoking that the parties responsible were unable to retrieve their fishing tackle.

The Nation's Timber Lands

An indication of the situation that will be faced by Canada in a very short time, if the destruction of forests by fire continues in such widespread fashion as during the past few years, is seen in a report by Dr. Richard T. Ely, professor of the University of Wisconsin, on the "Forest Crisis" in the United States.

Dr. Ely has made a recommendation for Government ownership of all forest lands in the States and the creation of a block system in timber areas so that administration and fire protection would be economically conducted. In this connection, it is pointed out that whereas the American people own just 25% of their forest estate, 85 per cent of all timber lands in Canada belong to the people of the Dominion, which means that every time there is a forest fire in the Dominion the whole Nation suffers—not "just the lumber companies." Industrial, economic, and employment conditions are also directly affected by a timber conflagration.

Dr. Ely, in his statement, refers to the fact that there are 80,000,000 acres of burnt-over forest country in the United States which are lying absolutely idle. He also stresses the economic value of maintaining and protecting natural forest beauty for recreational purposes.

"The Great Lakes Section will lose 75 per cent of its charm when the forests are gone," he said. "Recreation means an actual money income to the State. It is estimated that Michigan profits to the extent of \$75,000,000 a year from the people who visit that State for recreational purposes."

Record Cut of Pulpwood

The largest cut of pulpwood in the Thunder Bay district was made last winter, when 263,409 cords were taken from the forests. This is over 100,000 cords more than was cut during the winter of 1922. The value of the pulpwood, according to J. Millway, Crown Timber Agent, Port Arthur, Ont., will run in the neighborhood of \$3,160,908. The cut of railway ties, 463,978, was also the largest on record for the district. The value of all timber cut here last winter will total over \$4,405,000. In addition to the ties and pulpwood there were cut 550,043 sawlogs, valued at approximately \$678,553; 34,480 pieces of dimension timber, valued at \$137,920; 305 telegraph poles, valued at \$610; 9,681 cedar posts, valued at \$14,521; 9,000 cords of firewood, valued at \$56,000.

Pulpwood Export to be Restricted

By a vote of 96 to 57, the House of Commons, at Ottawa, lately defeated an amendment to give the six months hoist to the Government bill empowering the Governor-in-Council to prohibit the export of pulpwood; and subsequently the bill received third reading.

The amendment moved by Major Power of Quebec South,

came from the Liberal ranks, but it received only seven Liberal votes, including that of the mover.

A. R. McMaster (Brome) opposed the bill as being "not consistent with the principles which we would have supposed animated a party calling itself Liberal."

"The Prime Minister has said that I have erected a little altar of my own," said Mr. McMaster. "That may be so but I can inform him that the fires of this altar at least are not fed with fuel from the splinters of a broken platform."

The United States had no duty against the export of pulpwood or anything else from the country. If Canada restricted or prohibited export she would simply be inviting reprisals. What could be the situation asked Mr. McMaster, if the United States chose to prohibit the export of hardwood which was used by Canadian manufacturers of furniture, or of cotton which was the raw material for Canadian cotton mills? What would be the situation if the United States Government put an embargo on the export of anthracite coal? The whole of central Canada was warmed by anthracite from the United States, and the people living in this section would view with great alarm any thing which would result in a stoppage of the supply.

W. C. Good, (Brant) thought there was something sinister in the measure. The necessary precautions to preserve forests seemed to have been used as an excuse to carry out a policy benefiting a few pulpmen in Canada by enabling them to purchase pulpwood more favorably in competition with purchasers of the United States.

The Empire Forestry Conference

Canada is honored by being selected as the meeting place this summer of the second Empire Forestry Conference. No effort is being spared to justify the selection, and it may be anticipated that the numerous delegates will return to their respective countries with a clearer conception than they have previously had of Canadian conditions, the advantages of Canada as a source of raw forest products, and of the state of her development in the manufacture of wood material into many different forms.

It is the aim of the Conference to find the ways and means of making the Empire self-sustaining in its timber supply. This involves careful stock-taking of forest resources, the pooling of information in regard thereto, and the establishment of facilities for increasing Empire trade generally in forest products.

The Finest Fresh Milk at a Moment's Notice even if Camp is Miles From a Cow

Good food makes good work—and more of it. Give your cook a chance to prepare a variety of wholesome, satisfying meals. See that he has always a sufficient supply of Trumilk and Milkstock.

C.M.P. Powdered Milk is convenient—a pound makes nearly a gallon of pure liquid milk, either whole milk or skimmed as ordered.

Write for samples and give them a thorough test. They will gladly be sent free.

The Thomas Pink Company, Limited

Manufacturers of Lumber Tools

PEMBROKE

ONTARIO

It's a Pink any-
way you take
it and it's the
best Peavey
made.

***Not altogether what we say,
but what users say***

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

West, Peachey & Sons Simcoe, Ont.

Relieve the Box Shook Shortage By the use of Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and
other dimension stock, LATH, HANDLE MATERIAL, Etc.

These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 40" Long

All cut any required thickness from $\frac{1}{4}$ " to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf $\frac{1}{8}$ ". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per

man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00 per M ft.
SAWING & OVERHEAD	2.00 " "
NET COST	10.00 " "

The Peter Gerlach Co.

THE BERNARD FRICTION CLUTCH

AND WHAT IT WILL DO

Friction Pulley Style C

Increase efficiency in production.

Reduce the cost of upkeep.
Facilitate operation.

Control of each department.

Safety to workmen and
safety to the belt.

Clutch, Style F

Wherever high grade equipment is desired, Bernard clutches are the selection. Consult our engineering service for your problems and how to handle special installations.

Duplex Clutch, Style B.B.

Friction control means better machine, more production. We are the largest Canadian manufacturers of Friction Clutches in Canada. Ask for our catalogue.

The A. Bernard Industrial Co., Fortierville, Que.

SHIMER

*Ask
for
our
Catalogue*

THE wide awake mill operator who desires strictest economy with highest efficiency always specifies Shimer Fast Feed Expansion Matcher Heads.

These heads are built extra heavy where the strain is greatest, and being devoid of all angles or openings, the wind resistance is lessened, and it cannot block with shavings. The straight knives are long, which assures greater service, while the circular knives can be set back and the straight knives jointed. In this way the whole width of the straight knives can be jointed at one setting. The circular cutter is then brought to its proper position.

SHIMER CUTTER HEAD CO., OF CANADA, LIMITED

Manufacturers of Cutter Heads, Safety Cylinders and Grinders

GALT — ONTARIO

For Economy's Sake - -

Use Arrow Head Saws

The Chrome Vanadium Steel of which Arrow Head Saws are made and whose special process of tempering is known only to us, is giving mill owners the greatest "saw mileage" ever known.

T. F. Shurly Co., Limited
St. Catharines, Ontario.

**Service under
all conditions**

The Lumber Truck with Steel Wheels

Keep your deliveries and car unloading going smoothly always by using this handy detachable truck with wide tire steel wheels. The wide tire steel wheels can not come off and any width of tire may be used.

Wood parts are, air seasoned and kiln dried; thoroughly ironed and braced. Axles are high quality square steel. Why not learn all particulars by writing for our free catalogue now?

Tudhope-Anderson Co., Ltd., Orillia, Ont.

PLIBRICO

ONE-PIECE FURNACE LINING

There is only one way to get maximum result from your Steam Boiler, Dutch-Oven, and Woodburner linings.

Install PLIBRICO, by your own men.

A drum on hand is an insurance against expensive and unexpected shut-downs.

BEVERIDGE SUPPLY COMPANY LIMITED
628-630 St. Paul St. West, MONTREAL, P. Q.

Safety Stayless Boiler (Patented)

MORE POWER PER DOLLAR INVESTED

The Safety Stayless Boiler with Dutch Oven Setting as shown above is especially suited for use in saw-mills and other places where slabs and sawdust are burnt.

The cost of the bricksetting is about one half of a return tubular boiler of same horse power.

Write for illustrated folder.

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"

"St. Marys," "Keystone" and "M.D. Elk"

What Did You Do with That Match?

The suffering and loss caused by forest fires are common knowledge and, yet, carelessness with fire in the forest continues. These forest fires are practically all preventable.

Save Ontario's Forests They're Yours

Every individual who steps inside the woods should remember he is in the midst of highly inflammable property, for the upper layer of ground in the forest consists of partially rotted wood, which will burn. Lack of consideration for this gave rise to the strenuous situation in Ontario the last week of May and the anxiety for days in some settlements.

Thoughtlessness or bad judgment or carelessness cause practically all forest fires. Your co-operation, as a citizen, is needed to prevent these fires by taking the same care in the woods as in your own home.

LUMBERMEN'S

EQUIPMENT

"LONG" No. 3 LATH BOLTER

A fast, smooth running, simply operated machine that will maintain a tremendous output without attention over long periods. The best of materials and workmanship have gone into its construction, the design is simple and efficient—it is backed by "Long."

These are the reasons for its use by the largest mills in Canada.

Floor space required 4' x 4' 6". Weight 1,600 lbs. power required 15 H.P.

We also manufacture a complete line of:-

- Niggers, steam and friction Band and Circular Resaws.
- Saw Frames.
- Shingle Machinery.
- Trimmers.
- Transmission Machinery.
- Carriages.
- Cant Flippers, Steam Edgers.
- Lath Machines.
- Lath Binders and Trimmers.
- Log Jacks.
- Log Kickers.
- Log Loaders, Steam.
- Log Turners, etc.

Ask us about them.

Note—

Many new and desirable improvements have recently been incorporated in the No. 3 Lath Bolter. These are not shown in the illustration. A card will bring full particulars.

TRANSMISSION MACHINERY FOR THE SAWMILL

When you are overhauling your mill you will find quite a lot of parts—boxes, shafts, gears and pulleys—that need replacing. We can supply anything you will need in this line.

We supply pulleys in any size up to 12' in diameter, sheave wheels too. Steel shafting up to 25' long as large as 12" diameter, rough or finished, keyseated as desired. Also solid and clutch couplings, and set collars of every kind.

Our boxes and bearings, shaft hangers and mule-stands are furnished in standard styles and standard sizes.

If you require gears we build them in steel, iron and wood, cast or machined. Our patterns cover gears and blanks of most sizes called for and we can furnish what you want on short notice. Paper and iron frictions are accessories which we turn out right. Let us re-new yours.

Make out your repair list this week and we will give you right prices and quick delivery on it. Our workmanship is guaranteed.

Linn Logging Tractor on the operation of the Murray & Omanique Lumber Co., back of Barry's Bay, Ont.

THE LINN LOGGING TRACTOR

Hemlock is probably the heaviest of the soft woods—in the green log—Murray & Omanique cut in 16' and in 24' logs. Their average hauling distance was $4\frac{1}{2}$ miles—Their average train consisted of seven sleds—carrying 320 hemlock logs—five sleds loaded with 16' logs and two sleds loaded with 24' logs, to the train.

They hauled 2,000 logs per day of 24 hours.

Their road contained two up grades of 7%—They also had to haul down several steep down grades of about 25%.

They figure that their Linn Logging Tractor did the work of 20 teams of horses.

Linn Logging Tractors were in operation last winter as far east as Newfoundland, and as far west as Esher, Ont. Next winter Linn Logging Tractors will be in operation as far west as Ignace, Ont. 90% of the mechanical log hauling in eastern Canada was done last winter with Linn Logging Tractors—from the orders we have already received for new Linn Logging Tractors for fall delivery, we would say that next winter the percentage will be still higher.

Every user of a Linn Logging Tractor is an enthusiast for Linn Logging Tractors. This is the seventh of a series of photographs taken in Ontario and Quebec last winter, where Linn Logging Tractors were in operation—the eighth will appear in the July 15th issue of this magazine.

The actual performances of Linn Logging Tractors, when related by us, have been frequently doubted. But our users will vouch for our statements.

"Hamilton" Steam Tension Band Mill

(Single or Double Cutting)

SPECIAL FEATURES OF THIS BAND MILL

- 1—Quickest and most sensitive form of tension yet devised.
- 2—First used on our machine.
- 3—Top wheel supported both above and below mandrel.
- 4—Extra large mandrel bearings top and bottom.
- 5—Top wheel has 12-inch range of adjustment.
- 6—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
- 7—Both top and bottom wheels instantly aligned by screw adjustment.
- 8—Operating mechanism is rapid and power driven.
- 9—Takes saws 12 inches to 14 inches wide.
- 10—Extra heavy, rigid, strong and accurately built throughout.
- 11—Built by expert workmen in a plant that has been manufacturing high grade saw-mill machinery for over sixty years.

HOCKEN PINE INCREASES SALES AND PROFITS

After all, the only reason you're in business is to make money, and the only kind of lumber you're interested in is the kind that's able to stir up business and bring in the profits. Hocken lumber is that kind. We've proved it time and again to merchants all over Canada.

We'd like to prove it to YOU.

The Factor of Safety

In engineering when working stresses for wood, steel, concrete and other elements of construction are being computed, a certain percentage is added to the figures or sizes arrived at to provide a "factor of safety" to eliminate any chance of failure.

"Gordon Guaranteed" is our way of providing a factor of safety. Think it over.

Important Announcement

A Shingle Nail is now being manufactured in Canada which should last the life of British Columbia Red Cedar Shingles.

This is a heavy gauge nail, has sharp point, wide head with thickened shank under, and is protected with a heavy coating of pure galvanized spelter applied by hot-dipped process.

Red Cedar Shingles applied with such nails assure a roof of lasting satisfaction.

Every lumberman could stock these nails to advantage. We will gladly send samples.

British Columbia Lumber Commissioner

"TEN-TEST" SOLID FIBRE BOARD

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

*No
Pot of Gold
at the
End of the
Rainbow*

Most of us will recall the thrill of disappointment of our childhood days which followed a realization that the wonder-story of the untold wealth lying at the end of the rainbow's colorful trail was only a myth.

There are few among us who have not, from time to time during the prosaic business career of mature life, had visions and promises urged upon us almost as impossible of fulfilment as the fairy tale of the rainbow.

INDEMNITY AGAINST MISFORTUNE has, in its various phases, furnished a prolific field for the dreamer, the visionist, the enthusiast--as well as those seeking self-advancement at the expense of the unwary. Insurance history contains many records of failure because the wholly impracticable was promised.

THE LUMBERMEN'S UNDERWRITING ALLIANCE

bases its offer of SERVICE TO THE LUMBERMEN on nineteen years devoted to the study of FIRE HAZARDS attendant upon the manufacture and storage of LUMBER; on its broad experience in the work of FIRE PREVENTION and FIRE CONTROL; on an earnest desire to reduce the danger of FIRE and a determination to force the cost of LUMBER PROPERTY INSURANCE down to the lowest level consistent with soundness.

The writer of the following letter had not been promised impossibilities. He was not looking for gold at the end of the rainbow; but he found at the termination of his active association with the ALLIANCE a surprising and most satisfactory SAVING. The faith had been kept because the promised benefits were within the realm of reason and common sense.

Dear Sirs:-

Attention of L. D. Payette, Chief Agent for Canada

I wish to thank you for the two cheques received, one in favor of James Playfair & Company and the other in favor of Playfair & White aggregating approximately \$2800.00, which is in full liquidation of the insurance carried by your good selves during the time we were actively engaged in the lumber business.

On looking the matter up I find that our premiums amounted to \$13,726.00, during the time you had our insurance, and we have received back, including the above amount, \$4700 which means a saving of around 34%. This is in addition to the saving we made by your rates being a good deal lower than other Companies.

I would also like to mention that while you had our business your system of inspection was most efficient in every way and am sure a good many losses were saved by same. If I ever go into the lumber business again will not forget you. Again thanking you for the cheques.

Yours very truly,
JAS. PLAYFAIR.

BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Above: Every strand of Link-Belt Chain is tested under load before shipping.

Insert: The Link-Belt Laboratory. Years of research and experiments have enabled us to reach and maintain the high Link-Belt standards.

Showing stock of chain at one of our warehouses.

HERE'S WHY YOU SHOULD USE LINK-BELT CHAINS

EVERY strand of Link-Belt chain is not only made from the best materials, but is inspected and tested under load for strength, and uniformity of pitch.

Uniform high-tensile malleable iron castings—hard smooth pins—hard smooth cored holes for pins—generous wearing shoes for dragging—uniformity of pitch,

giving good sprocket action. These are reasons why Link-Belt Chains wear longest.

Measure values in length of service, and you will find that Link-Belt Chains are cheapest in the long run.

This  mark identifies genuine Link-Belt Chain.

Trade Problems Worthy of Serious Consideration

Lumber Retailers and District Associations May Well Give Thought to Timely Topics That Crop up in Their Business in the Course of Each Day's Operation

There are many problems in the retail lumber line that can always be profitably discussed, either at Association meetings or in the columns of the trade press. Too little attention is frequently devoted to minor matters, and it is surprising the large number of what might be called petty questions that could be considered with profit and pleasure. It is not possible, of course, to give detailed attention to every one, but retail lumbermen could very well do some thinking along the lines suggested in the subjoined queries.

The "Canada Lumberman" will be pleased to have comments from retailers on any of the questions as it is only, by an exchange of thought, view and speech, that knowledge is extended and a better grasp of trade and business affairs obtained. He, who is master of his own enterprise and its details and who studies the problem of service, proper stock-keeping methods, overhead systems, cost accounting, collections, discounts, insurance, banking, etc., is the one who grows in influence and is ever extending his activities.

There are plenty of retail lumbermen, so-called; fellows who are fine talkers, smoke a good cigar, tell a funny story, make predictions regarding the elections or tell how and why the local baseball team is putting it all over the other fellows. In the end, he who gives specific information, who goes beneath the surface and looks into the situation with a keen, analytical mind and not from a narrow angle or any superficial view point, will reap the largest reward and travel furthest on the road to prosperity and success.

However, this is a story quite apart from the consideration of any of the following questions on which the "Canada Lumberman" would be glad to receive from its readers suggestions, experience or ideas.

The cost of operation and maintenance of a motor truck for the average town yard, as compared with horse delivery.

What is turn-over? How may it be determined? What means can be taken to increase turn-over?

Is it possible for a dealer to increase the volume of business in his community, or does business just happen according to the state of the times and business situation?

Should special discounts be given to contractors, large customers or others who purchase regularly and in quantities from the retail yards?

What is the most effective way of meeting frequent requests for lower prices and the "shopper" who goes from yard to yard seeking what he terms the "best bargain."

What forms of advertising have the members found most productive,—newspaper space, booklets, souvenirs, calendars, road signs, price lists?

Is it a safe plan for a dealer to obligate himself to furnish material to complete any particular job for a given sum?

It has been asked, would it not be a better practice to submit an itemized list with quotations attached and extended. In this way the price for each item would be indicated and definitely known, whereas, where a blank sum is named, all individual prices are continued.

Is this a good time for lumbermen to stock up? Will the prices of lumber increase before the net cut is available?

Is there an advantage in buying direct from the mill over buying from the wholesaler?

Terms of sale and enforcing them. If discount for cash, how much?

Rebates to contractors, or relation of contractor to the lumber business.

Can a retail lumber yard be run successfully on a cash basis?

Value of window displays and their pulling power.

How to get the co-operation of the contractors and architects in a town working out a plan book system.

Mill work costs.

Right and wrong methods of soliciting business.

Meeting competition fair and unfair.

Method of dealing with the customer who is good but slow.

Cost of doing business, its increase and why.

The turnover of different items in the course of a year's business.

Will the lumber merchant of the future be the contractor, selling completed homes and other buildings, having one's own crew and business organization?

Adjustment of lumber claims when not up to grade.

How to build up an organization and keep up its interest.

How to run a small, detail factory profitably.

Best advertising medium for retail yards and why.

Necessity of retail yard advertising to combat the ready-cut.

Cash and carry in the retail lumber business. Will such a system come in near future?

Rural advertising and roadside signs where one has no local paper or refuses to patronize it.

The handling of cheap goods to overcome or meet demands of customers who send away for their material.

Grade and trade marking of all lumber; its advantages, etc.

Co-operative advertising and publicity by retailers of a community to create a desire to own homes; posters, copy, etc., to be furnished by the association.

Business ethics as practiced by the manufacturer of lumber, sash, doors and other mill-work in local territory. Reference is especially made to the practice of quoting consumers practically the same price as to dealers.

Some way or some plan by which the retailer and manufacturer can get together on grades of lumber shipped and received.

Minimum volume of sales required for a profitable investment in the average small town yard.

What will help retail lumbermen to become better masters of their business?

What is the most successful and generally satisfactory method of buying lumber for stock? Give details, such as do you buy from wholesalers, jobbers or manufacturers? Do you buy as you need stock or do you buy on weak market, etc.? How do you determine the market trend?

Should there be written into the grading rules covering planing mill stocks provision for the use of short lengths?

Moving picture advertising, is it an asset or a liability?

How can the returned material evil best be handled?

Retail Lumberman and His Delivery Problem

—Truck Tractors and Trailers—

By L. G. Jackson

It is my desire in this series of articles to assist the millman or lumber yard owner, by presenting the various ways in which he may deliver his products. It is not possible to state in a definite way what should be done regarding delivery equipment, without first knowing the various conditions under which the prospective client operates; therefore the proper selection is left to the future owner, assisted by the salesman representing the house selling the various trucks or tractors.* It is hoped that these contributions may prove to be of material assistance to any who may have transportation problems to solve.

As, in the previous article, I, will here outline and explain three methods of lumber delivery namely, by means of a truck and four-wheel trailer, a truck and pole trailer and a truck tractor and semi-trailer.

Another of the series will consist of a brief discussion of merits of the various methods and will be accompanied by a chart showing the comparative costs of operation so that one can compare the different systems from a financial standpoint. It is desired that those having problems dealing with lumber delivery will feel free to ask for assistance or advice in solving them.

In delivering lumber from yards situated in large centres of population or to jobs requiring heavy quantities of the one kind of stock, it is necessary to handle as much at one time as possible. To do this you can employ one of several types of equipment, and, possibly one of the most serviceable additions which you can make to your outfit, is the purchase of a four-wheel trailer for use in conjunction with your truck. The capacity of this trailer will depend, of course, upon the ability of your truck to handle extra tonnage beyond that rated for it by the truck builder and also upon your local roadways.

How to Handle More Lumber

An ordinary trailer equipment is usually of two to three tons capacity and has a loading platform approximately five feet wide and twelve feet long with side racks. Trailers of this type are frequently equipped so that they may be towed from either end. They have a locking device which permits of the lead wheels being free to steer with and having the rear ones locked in position.

With this added to your delivery system, a bigger quantity of lumber may be hauled at one time than is ordinarily possible and at very little greater cost for operation; also by using two or more trailers, a force of men, loading or unloading, may be kept more steadily engaged, thus saving labor charges.

It is not my desire to enlarge upon the value of truck and trailer use but, rather to point out the various installations available, in order that when new equipment is being considered by the lumber retailer, he may be as conversant as possible with the situation and select equipment more nearly suited to his requirements.

The foregoing equipment can also be used to good advantage in handling long timbers. This generally is more easily cared for by having a pole trailer available and, while this piece of equipment is not expensive, it should be part of the delivery system of every yard boasting a business of any great extent or one catering to the supply of long material, as its use saves much wear and tear on both man and machinery in that, excessive overhang is eliminated and added wear through unhung weight is done away with.

Truck Tractors and Semi-Trailers

Possibly one of the most up-to-date methods of handling lumber is by means of truck tractors and semi-trailers. In this article I show such an installation, the trailer being coupled to the tractor and waiting to be attached or standing for loading and unloading purposes. By referring to the illustrations, you will notice that the tractor itself is of much shorter wheelbase than the ordinary truck. It also should be much lower gear reduction to develop the necessary added tractive effort at the rear wheels. The load is carried on the semi trailer, which rests on the back of the tractor and is coupled to it by means of a fifth wheel, which coupling is sufficiently flexible to adjust itself to the various road conditions. Thus, the weight of the load rests, on not only the trailer proper, but also on the rear of the tractor and is, spread over a much greater area than is possible by using a truck alone. This method of delivery permits of handling much greater weights than by employing a truck alone.

The coupling and uncoupling is simple and, when unhooked the trailer rests on two front supports or jacks and the tractor may then take an empty trailer away to be loaded or pull another one to the point of delivery for unloading.

This method, as previously stated, is possibly the latest and most up-to-date as used by many of the lumbermen. While many may think it ideally suited to their needs, it must be borne in mind, that this equipment will not work to advantage over certain road surfaces and on certain grades. Before adding such equipment it would, therefore, be well for the prospective purchaser to study local highway conditions under which the tractor and trailer would be operated and also have the manufacturer advise him of the tonnage which it can haul over certain road types and up various gradients.

It is the desire that these articles should be of value to readers, and an expression from any one who cares to pass an opinion or discuss the various methods as outlined, will be welcomed.

In a succeeding article an endeavor will be made to point out an entirely different method of lumber delivery, yet one which is to-day becoming very much used and is regarded as very satisfactory.

The lumber entering into the construction of an average brick building amounts to 15% of the total cost; the millwork an additional 9.6%.

Heavy duty tractor and semi-trailer which is the delivery system employed by a number of enterprising retail lumbermen

Hardwood Flooring Has Put Meaford on the Map

Annual Outing of the Seaman-Kent Co. Staff to Northern Town was Instructive and Delightful—Many Social Features and Stirring Addresses

From the hour they left the company's warehouse, 268 Wallace Ave., Toronto, on Friday afternoon June 29 for Meaford, until the return motor trip on Sunday afternoon, July 1 there was not a dreary moment in the annual outing which the Seaman, Kent Co., Limited, tendered their staff.

Over good roads and at a swift pace the journey between Toronto and Collingwood was covered so that the shipbuilding town was reached in time for dinner. Here a pleasant surprise awaited the party at the Globe Hotel. The civic and Board of Trade authorities of Meaford, hearing of the approach of the Seaman, Kent contingent, had arranged for a banquet in their honor, and supplied everything in connection with the function even to the orchestra. The dining room was crowded with alert representatives of the hustling northern town who gave Mr. Frank Kent, president of the company, a hearty cheer and cordial welcome. The menu was attractive, the speeches bright and interesting, the music sprightly, and many warm tributes were paid to Mr. Kent and his enterprising and aggressive staff on the splendid business they had built up in the hardwood flooring line and the busy factory which has been in operation in Meaford for over a score of years. Mr. Kent lived in that town until a few years ago, was its mayor for three years and took part in every movement that in any way strengthened the moral or material standing of the place.

After the tempting things had been disposed of, Mayor W. H. Sing opened with a few appreciative words relative to the ability, and foresight of Mr. Kent. The visitors were promised the freedom of Meaford and told that everything would be done to make their stay pleasant and profitable, a promise which was implemented in every way. Addresses referring in eulogistic terms to the Seaman, Kent organization and its widely-known product, were made by Wm. Riley, Reeve of Meaford; D. Williams, editor of the Collingwood Bulletin; Ed. Cleland, president of the Meaford Board of Trade; Newton Cooper, Meaford; W. A. Hogg, editor of the Collingwood Enterprise; A. C. Gordon, chairman of the Wholesale Lumber Dealers' Association, Toronto; K. J. Shirton, Dunnville, president of the Ontario Retail Lumber Dealers' Association; R. D. McLean, wholesale lumber dealer, Buffalo; G. B. Van Blaricom, editor of the "Canada Lumberman," Toronto, and others.

Mr. Kent modestly acknowledged the many gracious references to him, and said that any progress that had been made by the firm was through the hearty co-operation and loyalty of the staff at head office and in the various plants. Credit was due to no one in particular but to each individual. Every man had worked with harmony, unity and goodwill, to place the organization in the forefront and help it achieve the position which it holds as the largest hardwood flooring producing firm in the British Empire.

Meaford the End of the Road

Mr. Kent invited all those who had entertained him and his staff, to a return banquet at the Paul House on Saturday at 1 o'clock, which was accepted. Music was furnished during the evening by the Meaford Orchestra under the leadership of J. B. Wallace, local manager of the Bank of Montreal, and several rollicking choruses were sung from a selected song sheet.

After the dinner the party motored some 22 miles distant to Meaford where the members were the guests of the Seaman, Kent Co. at the Paul House, which family have been keeping hotel in that town for 70 years. Gus. A. Paul made a genial host and cheerfully and courteously looked after the comfort of everyone.

Saturday morning, June 30th, was spent in visiting the busy plant of the company where all the machines were in operation, and every department from dry kilns to shipping room and warehouse was carefully inspected. Not the least interesting was the branch of the establishment in which the sawdust is converted into saleable by-products, for which a ready demand exists. The various operations from the time the material passes through rip and resaws, on through the flooring machines, the end matching machines, the grading, sizing, bundling, transporting, etc., all aroused keen interest on the part of the 30 or 40 visitors. The factory is well lighted and admirably laid out, possessing every time and labor saving feature.

After a tour of the plant, several members went fishing and others repaired to the lawn bowling green where several ends were

played. Dinner time soon came around and the spacious dining room of the Paul House was filled with the members of the Seaman, Kent party of sojourners, representative citizens from Meaford, Collingwood and other places.

At the close of the conference and speeches which followed the dinner, several representatives were invited to get into a sight-seeing omnibus which was of most ancient type and reminded one of the pioneer period. It contained curtains that flapped in the wind, wheels that creaked and springs that sagged and groaned and grieved. The conveyance was hauled by a pair of equine plugs and driven by a veteran garbed in a tattered red tunic and a bowler hat which

Some of the Seaman-Kent lawn bowlers assembled on green at Meaford

came well down over his ears. Kazoos and other "musical instruments" added to the merriment of the occasion.

This was followed by a baseball match between the factory plant and the Toronto office. The former won by 14 to 12, although "Tom" Armstrong did his best twirling to keep down the score, but with somewhat indifferent success. J. Marshall was the strictly neutral umpire. Norman Wilton is the superintendent of the plant at Meaford and is proud of the ability of his boys, not only in turning out various grades of maple flooring but also on their performance on the diamond.

From Tree to Finished Product

In the evening there was at the local theatre the special film of the Seaman, Kent Co., showing the process of the manufacture of hardwood flooring from the felling of the trees to the finished product in a large and attractive ballroom. Many of the scenes in the movie were taken from the various departments of the plant at Meaford, and a number of "the boys" upon the screen were recognized by local residents who cheered them heartily, the same as they would celebrated film favorites. Mr. Kent explained the nature of the pictures as they were presented. The films which were secured at a large outlay by the Seaman, Kent Co., have been shown in various parts of Canada, and are instructive and inspirational from an industrial standpoint. After the production at the theatre some comics were run off at the hotel, and by this time it was midnight and the boys had to turn in for slumber.

On Sunday morning the majority of the visitors went to church and shortly after noon the return trip was begun, the party travelling by way of the far famed Wasaga Beach, a many mile stretch of clean, hard, white sand a few miles south of Collingwood. A number stopped at Bradford for tea and on reaching Toronto declared the outing to be the most successful and interesting of any in which they have ever participated.

Some Members of the Party

Among those who were fortunate enough to be present were,—R. D. McLean, Buffalo; Alex. C. Gordon, Toronto, chairman of the Wholesale Lumber Dealers' Association; K. J. Shirton, Dunnville, president of the Ontario Retail Lumber Dealers' Association; E. McG. Quirk, Department of Labor, Montreal; M. J. Hutchinson, Hugh C. MacLean Publications, Toronto; G. B. Van Blaricom, "Canada Lumberman," Toronto; George T. Bissell, sec-treas; Seaman, Kent Co., Toronto; E. H. Stanners, sales manager, Toronto;

B. H. Harling assistant sales manager, Toronto; Horace Warren, purchasing agent, Toronto; George K. Tyler, manager Montreal branch; M. J. McCabe, accountant, Montreal branch; H. Watson, cost accountant, Toronto; T. A. Macdonald, chief accountant, Toronto; Arthur G. Sills, hardwood flooring dealer, Belleville; D. M. Heise, salesman, Toronto; T. E. McKenzie, salesman, Toronto; C. E. Hough, salesman, Toronto; T. A. Armstrong, salesman, Toronto; Frank Walden, assistant accountant, Toronto; Frank Jennings, salesman, Toronto; Cecil Snelling, foreman Toronto warehouse; A. C. Morris, sales manager, Canadian Oil Companies, Limited, Toronto; K. S. White, Kent Ockley, Toronto, and others.

At dinner at the Paul House Frank Kent presided and everything passed off most pleasantly. The toast to "The King" was duly honored, after which Mayor Sing, of Meaford, and E. McG. Quirk, Montreal, did justice to "Canada." Dr. Hamill, now Postmaster of Meaford, who was Mayor in 1901 when the Seaman, Kent Co. located their plant in Meaford, and W. W. Stephen, then a member of the municipal council, a great booster for the industry, recalled interesting reminiscences of a score or more years ago and told of the great benefit the hardwood flooring factory had been to the town and how since its location there Meaford had enjoyed steady expansion.

Other speeches on the development of the hardwood flooring industry in the various factories of Seaman, Kent Co., the splendid record that had been achieved and the bright outlook were delivered by George K. Tyler, manager of the Montreal warehouse, George T. Bissell, Toronto, sec.-treas. of the company; E. H. Stanners, sales manager; Arthur G. Sills, of Belleville; Kent Ockley, of Toronto; H. Watson, cost accountant, Toronto; M. J. McCabe, Montreal branch, and others.

Among the citizens of Meaford who paid tributes to the work and worth of Mr. Kent were,—T. R. Moore; O. A. Keffer; Col. Cleland; Ex-Mayor, S. A. Gray; Dr. Huff, Inspector of Schools; A. Londry; David Gibbons, president of the Meaford Bowling Club, and others. Brief remarks were also made by A. C. Gordon, who sang "The Standard on the Braes of Mars," and M. J. Hutchinson, Toronto, who spoke as a Rotarian and praised Mr. Kent for the constructive work he was doing in connection with the under-privileged boys of Toronto, a home now being conducted at Wilcox Lake, North, Yonge Street. There the lads who are considered worthy of being given a chance, are afforded every encouragement and incentive imparted to right-living and right thinking. K. J. Shirton, president of the Ontario Retail Lumber Dealers' Association, also spoke.

A hearty vote of thanks was tendered Mr. Kent for the hospitality of the Seaman, Kent Co., the resolution being moved by Mayor Sing and seconded by W. W. Stephen. It was presented to the gathering by A. C. Gordon and was carried amid salvos of applause. In replying the recipient reciprocated the many kind things spoken of him, and said any measure of success with which his organi-

zation had met, was not due to any particular man but to the boys as a whole. They had worked unitedly and aggressively for the upbuild and welfare of the company, eliminating the purely personal element for the prosperity of the company and its products.

One of the features of the afternoon was a stirring address on "Salesmanship" which was delivered by A. C. Morris, of Toronto, general sales manager of the Canadian Oil Companies, Limited, Mr. Morris handled his subject in an able and forceful manner, and drove home many pertinent points.

We Reunite in the Rim

One of the Features of the gathering was the distribution of a circular tag each bearing the name of the recipient and the words,— "Souvenir Seaman, Kent Co., Limited, Annual Outing June 29 to July 1, 1923, Meaford, Ont." On the reverse side were the maple leaf and beaver which are the trade mark of Seaman, Kent flooring. Radiating from the centre to the circumference were spokes which proclaimed quality, honesty, loyalty, service, tact, co-operation, courtesy and aggressiveness. The outer rim of the wheel set forth the slogan,— "Even if we do not agree in our opinions, yet like the spokes of a wheel, we reunite in the rim."

Sales Manager Stanners, in his remarks, gave some interesting figures. He stated that the total production in all factories (Meaford, St. Agathe and West Lorne) during the year ending June 30th 1923, was 21,204,482 feet, b.m. and the shipments for the same period amounted to 21,750,163, feet. The decrease in stock for the year was 545,681 board feet.

Mr. Watson gave some illuminating statistics regarding the machine run in lineal feet and the equivalent in miles, based on the output for the month of May 1923. At Meaford the average daily run was 222,227 lineal feet, West Lorne 166,274 lineal feet, St. Agathe, 119,730 lineal feet, making a total of 508,231 lineal feet. The number of miles of hardwood flooring per daily run, if the output was placed end to end would be at Meaford 42, at West Lorne 31.5, St. Agathe 22.7, total 96.2.

Mr. Watson stated that the flooring at the company's three factories based on the present output, was produced at the rate of 9.8 miles per hour; 96.2 miles per day, 2,310 miles per month and 27,720 miles per year. The total output for one year, if placed end to end, would stretch 1 1/10 times around the circumference of the earth. At Meaford five machines are operated, West Lorne, three, St. Agathe, three.

It was announced by one of the speakers that an order for Seaman, Kent hardwood flooring had been lately received from the West Indies. Extensive improvements are also contemplated at St. Agathe. The dry kiln capacity will be increased, additions made to the boiler house and other alterations carried out.

Quebec Retailers Enjoy Sail to the Saguenay

The first summer excursion of the Province of Quebec Retail Lumber Dealers' Association and of the Montreal Retail Lumbermen's Association to the Saguenay River on June 29-July 3, was an unqualified success. Although it was organized on comparatively short notice, the arrangements were quite adequate. The main object of such outings is the cultivation of the social side of such organizations—the getting together in a way that is not otherwise possible—and this was fully accomplished. The association extended its field of invitation to lumbermen outside the retailers' circle and several members of the Montreal Wholesale Lumber Dealers' Association made the trip. Altogether the party numbered 77, including the wives and families of the retail and wholesale dealers.

The journey to the Saguenay is the most favored of all those on the St. Lawrence going East. It furnishes the opportunity to visit the city of Quebec with its old world associations, the more modern city of Three Rivers, which is an industrial centre in pulp and paper line, and Chicoutimi which is also the scene of much activity in pulp and paper. All these places have many years' connection with the industry. Then the visitors have the pleasure of viewing some of the finest river and mountain scenery in the Eastern part of the Dominion. The trip appeals to those who love beautiful landscape, those whose interest is of an historical character and those who are attracted by city sight-seeing.

The journey was made in the new boat "Saguenay." The party left Montreal on the evening of Friday, June 29th, and arrived at Quebec at 5 o'clock the next morning. Some of the members went ashore for a short time, the boat leaving at 8 o'clock. After a stop at St. Timothee, the "Saguenay" arrived at Murray Bay at 2.45, where a visit was made to the Manoir Richelieu. Here the choir of St. Enfant Jesus and the St. Jean Baptiste, who also made the journey on the "Saguenay," gave a most delightful concert.

The next stop was at Tadousac, rich in historical associations.

Some of the sojourners visited the old Indian church, built in 1717, and saw the fine collection of relics. At Tadousac the St. Louis de France Choir entertained the party with a splendid programme of classical music. Miss Benard gave some old, folk love songs, while Dr. L. Verschelden, Mr. Germain Lefebvre and Dr. Poissant also contributed to the programme. The concert was followed by a dance.

The boat left at midnight and arrived at Chicoutimi early on the morning of Sunday, July 1st. Some of the members inspected the pulp mill and the boat commenced the return journey at 4 o'clock in the afternoon. The wharf was crowded by the inhabitants, who joined in singing "Oh Canada," as the "Saguenay" departed. One of the most impressive sights of the excursion was Capes Trinity and Eternity, 2,000 feet high, the boat stopping for a quarter of an hour to allow of a proper view of these magnificent masses of rock.

The city of Quebec was reached at 6 a.m. on Monday July 1st. The party was met by Messrs. O. Chalifour and J. M. Dessureault, directors of the Quebec district. Through their foresight and that of M. G. Chalifour, arrangements had been made for the loan of fifteen motor cars. These were kindly placed at the visitors' disposal by the Brown Corporation; J. G. Chalifour; O. Chalifour; J. H. Gignac, Limited; Nap. Gignac, Inc.; the J. Lefrancois Company, Limited; E. T. Nesbitt, Reg.; W. & J. Sharples, Limited; St. Lawrence Lumber Co., and the South Shore Forest Products, Limited. The guests were first taken to the Quebec Bridge and then to Montmorency Falls, the drivers of the cars explaining the interesting points to the uninitiated.

Prior to embarking Mr. H. H. Sheppard, of Sorel, took a group photo of the party. A stop was made at Cap de la Madeleine, where a visit was made to the ancient church. From there the vessel journeyed to Three Rivers, the opportunity being taken to inspect some of the principal points of interest in this growing city. On the trip

The Quebec retail lumber excursionists aboard the "Saguenay" during the stay of the party in Quebec—Photo by courtesy of H. H. Sheppard of J. Sheppard & Son, Sorel.

from Three Rivers to Montreal, the two choirs again entertained those on board, the concert being directed by Dr. L. Verschelden and Mr. G. Lefebvre. At the termination of the programme Mr. G. Lebel, president of the Province of Quebec Retail Lumber Dealers' Association, expressed appreciation of the efforts of the choirs and also of the courtesy of the officers of the steamer. He presented purses to the captain, steward and assistant steward. Bishop L. A. Debuc also spoke, referring incidentally to the high place held by the lumber industry in Canadian commerce.

The "Saguenay" arrived in Montreal on the morning of Tuesday, July 3rd, after one of the most pleasant excursions possible.

The committee responsible for the arrangements were:—Messrs. J. P. Dupuis, George Lebel; J. A. Bonneau; J. I. Greeves; C. Drapeau; H. de Charette; L. W. Halliday and G. A. Thompson. Each member of the party was provided with a button and red, mauve and white ribbons while the committee were distinguished by special ribbons.

The following composed the party:—

J. P. Dupuis, president of the Montreal district of the Provincial Association, Mrs. J. P. Dupuis; Miss Jenne Dupuis; Armand Dupuis,

Rolland Dupuis, Leon Dupuis, C. Dupuis, E. Dupuis; Mr. and Mrs. J. I. Greeves; Mrs. Edouard Greeves; Mr. and Mrs. L. W. Halliday, Miss M. Halliday, Miss G. Halliday; Mr. George Lebel, president of the Provincial Association and Mrs. Lebel; Mr. and Mrs. Dupuis and daughter; Mr. and Mrs. J. I. Lebel, Miss Lebel; Mr. and Mrs. Phil. Pare; Alfred Cossette and son; Mr. and Mrs. J. O. Clermont (Valleyfield); Mrs. G. Millen and daughters; Mrs. J. Baudoin; Mr. and Mrs. Leduc (Beauharnois) Mrs. J. S. Bock; A. R. Bock; H. J. Tetreau; Mr. and Mrs. O. Page and daughter; Mr. and Mrs. Gouin; Mr. and Mrs. E. Abel; Mr. and Mrs. A. E. Fortin; Mr. and Mrs. R. N. Bourgeois (Three Rivers); Albert Limoges (Terrebonne); H. H. Sheppard (Sorel); I. Renaud; Mr. and Mrs. H. de Charette; J. O. Chalifour; G. Chalifour (Quebec); Mr. and Mrs. W. H. Thompson; J. Duclos; I. Langlois; Mr. and Mrs. J. Theoret (Beauharnois); C. Drapeau; L. Doucet, (Coteau Station); J. W. Gross; V. Trahan, (St. Johns); Mr. and Mrs. G. A. Thompson (secretary); L. A. Carriere and J. I. Dupre.

The directors of the Association desire to express their appreciation of the arrangements made by the Canada Steamship Lines, Limited.

Ontario Dealers Visit the Thousand Islands

Enthusiasm and delight were abundantly manifested by the members of the Ontario Retail Lumber Dealers' Association, their wives and families, on the annual mid-summer outing to the Thousand Islands on July 6-9. The 500-miles sail was enjoyable in every particular and the visitors were accorded a warm welcome at Brockville, Kingston, Belleville and other places. No factor that could contribute to the success or comfort of the party was overlooked and the "Cape Trinity," of the Canada Steamship Lines, in charge of Capt. Wm. Cornett and his courteous crew, was an ideal boat for the journey. Her appointments and other features which add to the pleasure and satisfaction of travel, were highly spoken of by all the congenial sightseers who numbered sixty. It is to be regretted that the attendance was not as large as it should have been, but what it lacked in numbers, it made up in a social and recreative way.

The steamer left Toronto at 2 o'clock on Friday afternoon July 6th, with a jolly party on board and at daylight on the following morning the first of the Thousand Islands was to be seen. The sail was down the American side, many picturesque homes being passed, and among the pretty places on the shady shores were Clayton, Thousand Island Park and Alexandria Bay. Everyone was immensely pleased with the beauty and loveliness of the surroundings, and when Brockville was reached at 10 o'clock, the sojourners were greeted by F. B. and Harold F. Van Dusen, of the Brockville Lumber Corporation, the former being a director of the O.R.L.D.A. A number of drives were enjoyed around the town, several retailers paying a visit

to Senator Hardy's famous dairy farm. J. B. Mackenzie, of Georgetown, and E. D. Hardy, of Ottawa, were transported by motor boat to the golf links. Brockville was found to be an attractive and inviting centre, with delightful parks and imposing public buildings.

In the afternoon at 2 o'clock the "Cape Trinity" sailed down the Canadian channel passing Mallorytown, Rockport and Gananoque. Historic Kingston was reached shortly before 6 o'clock, and after dinner on board the boat, the local lumbermen met the excursionists and entertained them to a three-hour motor drive around the Limestone City. F. R. Anglin and C. S. Anglin, (the latter one of the city aldermen) of the S. Anglin Co., and Roy Allen, of the Allen Lumber Co., extended a cordial greeting to all. The city is at present celebrating its 250th anniversary, it being the original site of Fort Frontenac, built in 1673 by that wise governor and intrepid soldier from which it took its name.

Among the institutions visited were Queen's University, the Provincial Penitentiary, the Rockwood Hospital for the Insane, the Mowat Military Hospital, the Royal Military College and grounds, Fort Henry, overlooking the noble St. Lawrence; the City Buildings, Memorial Hall, City Council Chamber and the business section. The guns, walls, moat and martello tower of Fort Henry were a source of much interest to all. Fort Frontenac passed through many vicissitudes, being alternately in the hands of the French and English until it was finally destroyed in 1758, and on this site Fort Henry was reared in 1812 by the English. Kingston was also the rendez-

vous and chief naval base of the British fleet operating on Lake Ontario in 1812 and 1814.

The Cruise up Quinte Bay

The travelling lumbermen and their ladies spent night on board the boat in Kingston and at daybreak next morning set sail up the famous Bay of Quinte and en route passed Wolfe Island, the far-famed Lake-on-the-Mountain, Glen Island, Deseronto, (the former scene of the lumbering and other activities of the Rathbun Company), the Indian Reservation in the township of Tyendinaga, Northport, Big Island, Massassaga Point, the huge cement works at Point Ann, and many other places of note until Belleville was reached. This was on Sunday morning and a large number attended the city churches, after which Mayor Bennett, J. O. Herity, of the Belleville Chamber of Commerce, Messrs. Angus and Keefer, the Belleville Sash & Door Co., and others, took the delegates for a motor tour around the City-of-the-Bay. The Belleville Country Club, the new buildings of Albert College, now in course of construction, and other points of interest were visited.

The stay of four hours in Belleville was so attractive and the time passed so quickly that, when the "Cape Trinity" departed at 4

The "Cape Trinity" on which the party sailed

o'clock, it was found that two or three automobile loads had not returned. It was necessary for the vessel to back up to the wharf again in order to take on the belated sightseers. They had tried to view too much within a limited time and came nearly being separated from the others in the party, or having to catch the boat at Trenton. On arrival at the latter town where Gill & Fortune, lumber merchants, now operate, the business portion was inspected and a fine view obtained of the main section from the more elevated portions of the town. Many years ago Trenton was the scene of the vast operations of the Gilmour Company, which flourished for several decades. Very little now remains of the original mill site and yard. At Trenton also begins the system of that imposing waterway, the Trent Valley Canal, connecting the Bay of Quinte with Lake Simcoe and others in central Ontario.

At 6.30 the boat left for Toronto and headed for the Murray canal, which is some seven miles long and links the Bay of Quinte with Brighton Bay, an arm of Lake Ontario. At the eastern entrance of the canal is the summer resort bearing the unique name, "Twelve O'clock Point," and at the western end, Presqu'île Point, now a part of the Provincial Park Systems.

On reaching Toronto early on Monday morning July 9th, the visitors from various parts of Ontario departed to their several homes after a midsummer outing that was restful, educational and health-giving in every respect. Five hundred miles of picturesque, Canadian waterway had been traversed and the associations were most delightful.

The Last Evening on Shipboard

On the final evening of the trip several bright and witty speeches were delivered and the sail was rendered all the more enjoyable by vocal selections from Mrs. T. A. Armstrong, Toronto, who never fails to delight her hearers. Her splendid singing was very much appreciated.

S. J. Hales, of Toronto, who is on the sales staff of John B. Smith & Sons, possesses a good voice and was heard to advantage in numerous selections, while the orchestra of the "Cape Trinity," composed of cadets from the Royal Military College, Kingston, were given hearty applause for many spirited contributions. During the evening short speeches expressive of appreciation of the trip, and the thanks of all the members present to W. B. Tennant, of Toronto, the energetic chairman of the Outing Committee, and to Secretary H. Boulton, for their efforts to make the event a success, and referring

to the happy time spent on the voyage were made by K. J. Shirton, Dunnville, president of the O.R.L.D.A., W. E. S. Savage, of Mimico, J. C. Irvin, of Toronto; Alex. Rhind, Toronto; G. B. VanBlaricom, editor "Canada Lumberman," and others. Suitable acknowledgments were made by Messrs. Boulton and Tennant.

There were various contests to enliven the three-days' sail. One was capturing the "mysterious Mr. Raffles." This much-sought-after but elusive individual proved to be Drummond Giles, purser of the steamer. His captors were Mrs. Harold W. George and Mrs. Horace Boulton. The presentation of silver pencils to the winners was made by E. D. Hardy, of Ottawa, in a facetious speech.

An old-fashioned "spelling match" with Alex. Rhind as official announcer was conducted. The prizes were won by K. J. Shirton, of Dunnville, G. W. Boake, Toronto, and G. T. Bissell, Toronto. The premiums were handed out by Udney Richardson, ex M.L.A., of Elora.

Mrs. Armstrong moved a vote of thanks, on behalf of the ladies, to the gentlemen for the presentation of a box of sweets to each member of the fair sex.

It was decided that Secretary Boulton should send letters of appreciation to the Brockville, Belleville and Kingston civic authorities and retail lumbermen for their kindness and hospitality during the stay of the party in these cities.

J. R. Beck, of Toronto, district passenger agent of the Canada Steamship Lines, and Oscar Day, superintendent of the Commissary Department, accompanied the boat on what was her initial trip of the season.

Plans for next year's excursion were talked over, and it was the unanimous decision of those present that a midsummer outing should be held in 1924 as these events from a social, educational and recreative standpoint are long remembered.

The Party on Cape Trinity

Those who took in the lumbermen's excursion were:—John B. Reid, Toronto, honorary president of the Ontario Retail Lumber Dealers' Association, and Mrs. Reid; K. J. Shirton, Dunnville, president of the O.R.L.D.A.; P. G. Piggott, (P. G. Piggott Lumber Co.) Chatham, and son, Gordon Piggott; Charles Hubbell, Thamesville, and Mrs. Hubbell; T. A. Armstrong (Seaman, Kent Co., Toronto) and Mrs. Armstrong; G. T. Bissell (Seaman, Kent Co., Toronto,) and Mrs. Bissell; Horace Boulton, secretary of the O.R.L.D.A., Toronto, and Mrs. Boulton; M. B. Thomson, (Thomson Bros.) Port Credit; John C. Irvin, (Irvin Lumber Co.) Toronto, and Mrs. Irvin; John Watt (Watt Milling & Feed Co.) Toronto, and Mrs. Watt; Udney Richardson, ex M.L.A., Elora, and Mrs. Richardson; W. E. S. Savage, Mimico, Mrs. Savage, Miss Edith Savage and Master Savage; E. D. Hardy, (E. D. Hardy & Co.) Ottawa; C. F. Richards (Laidlaw-Belton Lumber Co.) Sarnia; G. W. Boake (Boake Mfg. Co.,) Toronto, Mrs. Boake and Miss Boake; G. B. Van Blaricom, (Canada Lumberman) Toronto, and Miss Eileen Van Blaricom; Albert Tourangeau, (Essex Development Co.) Ojibway, and Mrs. Tourangeau, G. H. Arnott, (Windsor Lumber Co.) Windsor; H. McDowell (Laidlaw Lumber Co.,) Toronto, Mrs. McDowell and daughter; H. S. Bissell (Laidlaw Lumber Co.) Toronto, and Mrs. Bissell; S. J. Hales (John B. Smith & Sons,) Toronto; John Wells (Essex Development Co.) Ojibway, and Mrs. Wells; A. Rhind (Simpson Planing Mills,) Toronto; James Lockie, Canfield, Harold George (Laidlaw Lumber Co.) Toronto, and Mrs. George; John Major (Essex Development Co.) Ojibway, and Mrs. Major; E. O. Penwarden (Green Lumber Co.) St. Thomas, Miss Penwarden; J. T. Todd (Adams River Lumber Co.) Toronto; W. B. Tennant (John B. Smith & Sons) Toronto; J. B. Mackenzie, Georgetown, and Mrs. Mackenzie; A. J. Mercer (Mercer Bros.) Cookville, and Mrs. Mercer, and others.

Making Logs Too Hot for the Borers

Nearly everyone has had the experience of turning over a rotting log in the woods and finding the under side alive with insects which prefer to live and to work in the darkness. When the log is lifted over they scurry away to shady places.

Now the U.S. Bureau of Entomology, utilizing this dread of sunlight, has found that direct sunlight on logs will, in many cases, kill not only the insects on the outside of the log, but those within as well.

Logs act as heat traps. When placed in the sunlight they let in the heat faster than they radiate it and so get hotter and hotter until they are about 20 to 25 degrees above the temperature of the surrounding air. If the temperature of the air is up to 80, the inside of the log so exposed gets hot enough to kill all the bugs, or at least all those which do damage.

The method has been used in the control of the western pine beetle on the Pacific coast, and in the prevention of pin-hole defects in green logs.

Underwriting Alliance Opens Canadian Office

L. D. Payette, Toronto

In order to render more efficient service to their Canadian subscribers the Lumbermen's Underwriting Alliance, (U. S. Epperson Underwriting Co.,) of Kansas City, Mo., recently opened an office at 546 Confederation Life Bldg., Toronto, with L. D. Payette, chief agent for Canada, in charge. For several years the company has been doing business in all the provinces of the Dominion and Angus McLean, head of the Bathurst Co., Bathurst, N. B., who is also president of the Canadian Lumbermen's Association, was lately appointed Canadian member of the Advisory Board succeeding the late Senator Edwards who served for several years. J. J. Lynn is the aggressive general manager of the company which has been in operation since 1905.

Under his direction and with the cordial co-operation of all associated with the organization, its activities now extend all over the continent.

Mr. Payette, who has been with the Lumbermen's Underwriting Alliance for nearly nine years, was born in Penetanguishene, Ont. J. T. Payette, Mayor of that progressive town, is a brother. "L. D." secured his first job with James Playfair, widely-known lumberman of Midland, and soon became his private secretary. His next position was in Winnipeg where he represented Mr. Playfair on the Grain Exchange after which he joined the Lumbermen's Underwriting Alliance as secretary to Mr. Epperson. Mr. Payette rose steadily in the service until two years ago he was made chief agent for the Dominion. He has built up a good business for his organization and the opening of a Canadian branch evidences the advancement of the Lumbermen's Underwriting Alliance and the service it is rendering lumbermen. Undoubtedly one of the reasons which has materially contributed to the expansion and prestige of the company is its earnest effort in the matter of inspection which has tended to reduce the great waste of lumber properties caused through heavy fire losses.

Fifty Years Changes in Timber Trade

In the Jubilee Number of the London, Eng., Timber Trades Journal recently published, the veteran British timber importer from Canada, Henry Berkley, of the firm of Farley, Clark & Berkley, recounting his reminiscences of the past, writes interestingly. His remarks, which follow will prove of interest to old-time Canadian lumber exporters:—

To give anything like a history of the many changes in the timber trade over the past fifty years within the compass of a letter is quite impossible; but let me congratulate you upon the high state of efficiency which you have brought the "Timber Trades Journal" up to its jubilee.

Probably the chief factor in bringing about the many changes in the trade has been the transition from sail to steam as a means of transport, more especially in the import from the more distant sources of supply.

I remember trying to induce a large steamboat owner to send his boat to Pensacola to load a cargo of hewn logs for my firm, but he held strongly that it would "knock his boat to pieces." And now nearly the whole import to U.K. is by steam.

I remember we had some difficulties as to the discharge of these log cargoes, owners insisting that delivery must be taken from ship rail, until an eminent judge, learned in law and wise in reasonableness, decided that "to toss the logs over the ship's rail, and expect the merchant to catch them in mid-air was not a good and sufficient delivery."

Canada, too, has been a splendid source of supply, and it is a matter for great regret that the import has fallen off so considerably, as the different woods were so greatly appreciated; the Ottawa white pine is by far the finest wood we have for so many purposes, and the Canadian shippers have always held the premier position as shippers. The names of Sharples, Dobell, Burstall, Gilmore, etc., will long be remembered as representing firms of the highest commercial morality, with whom it was indeed a pleasure to do business.

I well remember signing a contract for 2,000 loads of prime Michigan white oak logs, to average 85 ft. cube, for shipment f.o.b.

at Quebec, and a very fine shipment it was, and there were many magnificent logs which caused the dock people no little anxiety to know how they could be loaded to truck. We were asked to allow these to be cross cut, but to this we demurred, and eventually I think the difficulty was overcome by using two cranes. Now we have to be satisfied with an average around 50 ft. cube.

Lord Bryce described Iceland as a land of negatives, and Canada might fittingly be described as a land of superlatives as the Canadians have everything on so large a scale, including snow.

I well remember driving out from Quebec Cove one bright frosty October morning to breakfast with Miss Sharples, and as I drove through the groves of scarlet maple and dark green pine I thought I had never seen anything more beautiful. Mr. Sharples' residence at Sillery Cove is, as its name seems to suggest, most beautifully situated, and I recall that at breakfast my ignorance as to how I was to eat the sweet corn caused great merriment. Well, it was a little difficult, though very nice.

Rimouski Lumber Co. is Expanding

The Rimouski Lumber Co., of Rimouski, Que., have practically completed extensive remodelling of their mill. They have extended their loading platform which will give them a loading space 30' x 400' long. The new power house is complete in every detail having installed 250 h.p. engine and boiler.

The mill will be 100' x 70', clear of all pillars which will facilitate the handling of lumber. The firm recently made changes in the management and were fortunate in securing Mr. D. P. De Laperelle, formerly with Price Bros., as manager.

The company have yard capacity for piling twenty million feet and purpose operating their three saw mills in the vicinity of Rimouski. They will specialize in dressing in transit as well as dressing all their own stock and have installed the latest type fast feed machines. P. B. Yates Machine Co., Hamilton, have supplied them with two Type A-4 planers and matchers with capacity to 200 feet per minute, one No. 341 band resaw, one No. 283 band resaw, one No. 281 band rip saw, one No. 108 moulder and one trim saw.

The Rimouski Lumber Co. have orders from American firms as well as extensive orders for Canadian firms and provision has been made for a capacity of ten to twelve cars per day. The company also have ample room to extend further and if business demands it, they intend to double their present capacity in the near future.

Lumber at British Empire Exhibition

W. B. Stokes, exhibition specialist of the Forest Products Laboratory, Montreal, who has been "loaned" to the Canadian Government Exhibition Commission, Ottawa, in connection with the British Empire Exhibition which will be held in London, England, next year, was in Toronto recently calling upon the members of the lumber industry.

The Canadian Government will erect a special building in London at a cost of several hundred thousand dollars to present all the varied natural products of the Dominion. The structure will be 240 x 400 feet, and the most central portion has been allotted to forest products. This space will be approximately 40 x 100 and will be devoted to a display of all the commercial woods of Canada, some in the rough and others in their finished state. There will be a suitable showing in panels and of built-in and built-up productions, in which various kinds of wood will be used.

Mr. Stokes reports that he is receiving much encouragement from the lumber interests and he expects that the exhibit of forest products will be both impressive and extensive. The British Empire Exhibition will open in April next and continue for six months.

High Price Paid for Spruce Logs

More than \$24 per thousand feet was paid for spruce logs at the annual no-mark sale of the St. John River Log Driving Company at St. John, N. B., lately. Local lumbermen regard the high price as indicative of prosperity in store for the industry.

All the spruce logs were purchased by Randolph & Baker, Ltd. All of the pine and some of the cedar and hemlock were purchased by Murray & Gregory, Ltd. The Fraser Companies, Ltd., took the remainder of the cedar and Stanley Douglas, Limited, took the remainder of the hemlock.

Walter Jackson, of Fredericton, represented the Log Driving Company. Others present were: J. Fraser Gregory, of Murray & Gregory, Ltd.; A. F. Randolph, of Randolph & Baker, Ltd.; Stanley Douglas, of Fredericton, of the York & Sunbury Milling Company, of Devon; W. J. Glenn, of Fraser Companies, Ltd., Fredericton; F. C. Beatteay, of Stetson, Cutler & Co., St. John, and Joseph Hawkins, of Hawkins & Sons, Nashwaaksis.

Lumber Standardization is Making Progress

By its action taken at its meeting in Chicago on June 22-23, the Central Committee on Lumber Standards has largely paved the way for a general standardization conference to be composed of accredited representatives from all affiliated organizations interested in the standardization of lumber, to be held at the Department of Commerce in Washington next fall, to take final action on its recommendations, which will be binding on the entire lumber industry.

At the recent meeting in Chicago, the Consulting Committee on Lumber Standards submitted a number of its recommendations to the Central Committee which were approved with very few changes.

Briefly, the recommendations as approved cover standardization of lumber sizes, simplification of grade names, and the guaranteeing of quality and quantity through grade-marking and inspection service.

Some of the recommendations are that standard finished yard boards should be not less than 25/32 inch thick, and that standard finished dimension should be not less than 1-5/8 inch thick.

The attendance was large and enthusiastic, and the thorough manner in which every detail was considered, together with the splendid spirit of compromise shown, indicates clearly that lumber standardization, involving a quarter billion dollars of annual savings and gain to the lumber consumers and to the lumber trade, is in definite and early prospect.

Tariff Commission to Investigate Log Duty

The United States Tariff Commission announces that it will hold a hearing in Washington on August 3 in regard to the duty on fir, cedar, spruce and western hemlock logs. This is the outcome of efforts that have been made by Washington state lumbermen to correct the inequity of the tariff law of 1922 which, while admitting free of duty shingles and lumber manufactured from logs of the species named, imposes a duty of a dollar a thousand on the raw material, the logs. Many of the shingle and some of the lumber mills of Washington import logs from British Columbia. The present situation has already shown a tendency to encourage the transfer of sawmill enterprises to the Canadian side of the line, as owners of American mills near the international line exhaust present timber supplies. British Columbian policy is to keep the logs at home that are cut from government lands, which are 90 per cent. of the timberlands of the province. But this permits the exportation of the surplus over home consumption. Prior to 1915 it was the policy to wait until there was a large accumulation of surplus logs before authorizing exportation. Now, however, the surplus is usually permitted to be exported as it accrues. The bulk of the log importations into Washington from British Columbia is cut from private lands and is not subject to embargo.

Washington lumbermen expect the next Congress to equalize matters by putting logs on the free list. In the meantime they have petitioned for a reduction in the present tariff rates by order of the President, through the Tariff Commission.

Australian Premiers Visit B.C. Log Camps

Logs scaling 10,000 feet being hauled out of the woods and loaded on flat cars, tall cedars, worth approximately \$750.00 each, being felled and prepared for shipment to the Fraser river and New Westminster and Vancouver mills, and a high rigger lopping the top off a monarch of the forest. These were some of the sights witnessed by Sir George Fuller, premier of New South Wales, Hon. H. S. W. Lawson, premier of Victoria, and party recently when they visited the logging camp of Abernethy-Lougheed Company, back of Port Haney, B.C. The visit was a fitting climax to the Australian premiers' brief stay in the Coast province and, according to their own expressed appreciation made to N. Lougheed and to G. G. Abernethy, when the logging train brought them back to Port Haney lately, it gave them first hand knowledge of the extent of the lumbering industry as it concerns British Columbia.

Blair Bros. Appeal in Lath Case

C. G. Ogden, K.C., counsel for Blair Brothers, Limited, Montreal, has been instructed by his clients to take to appeal a judgment of Mr. Justice Surveyer condemning them to pay \$8,124.65 to the Riverside Manufacturing Company of Cap Madeleine, Que. The plaintiff company in this case maintained that Blair Brothers wrongfully refused to accept delivery of a purchase of one million laths, and claimed the above amount as loss suffered on re-sale.

The grounds for defence raised by the defendant company, and which will be relied upon in appeal, in substance, are as follows:

That it had cancelled and repudiated the contract on June 16,

1920, because the plaintiff company had violated an agreement made by it through its president, Mr. Biermans to sell lumber to the defendant company during the season of 1920 and, further, that the plaintiff company did not take prompt and proper measures, or make any attempt or adopt sound business methods, either at the time of the cancellation of the contract by the defendant in the middle of June, 1920, or for several months afterwards, to contract with other parties in respect of the manufacture and sale of its lath and that the plaintiff company could, at the time the contract was cancelled, and during the summer of 1920, and for some time thereafter, have contracted with other parties for the manufacture and sale of the lath in question at a price equal to or better than that which the defendant company agreed to pay, and that in any event, the plaintiff company went to uncalled for and unnecessary expense to sell the lath several months after the cancellation of the contract at a time when there was little or no market for the same and that the defendant company was not for the reasons above mentioned indebted to the plaintiff company in any sum of money whatsoever.

Windsor Firm Report Expanding Trade

Elliot & Elliot, wholesale lumber dealers, Windsor, Ont., who have offices in the Bartlett Building, recently entered upon their third year in business and report that trade throughout the Border Cities section is lively at the present time. They specialize in British Columbia forest products, such as fir, spruce, hemlock and red cedar, and are also eastern representatives of the Pacific Box Co., Limited, Vancouver. During the past year they have broadened their connection and strengthened their position, particularly in the Niagara Peninsula.

Among the firms, whose products are sold in Ontario by Elliot & Elliot, are T. A. Burrows Lumber Co., Winnipeg, who are specialists in Manitoba spruce; Southern Alberta Lumber & Supply Co., Limited, of Seattle and Vancouver, and the Campbell Lumber Co., Limited, White Rock, B.C. The Southern Alberta Co., Limited, ship large quantities of fir commons in timbers and dimension, to the Eastern market via the Panama Canal. Their regular shipments average from 9,000,000 to 12,000,000 feet per month. The Campbell River Lumber Co. are widely-known producers of fir, cedar and spruce and have a good reputation in Ontario.

W. R. Elliot and J. E. Elliot, of Windsor, who comprise the firm of Elliot Bros., are well known to the trade in Western Ontario, and have worked up a live connection in timbers, lumber, lath, shingles and box shooks.

Several Timber Berths Are Auctioned Off

Six timber berths were sold at the Crown land office, Fredericton, N.B., recently. Two square miles on the Caraquet river were sold to W. G. White, of Bathurst, for \$21 per mile; two square miles on the Penniac to Charles Pond for \$20 per mile; three square miles on the Nepisiquit river to J. D. MacKay for \$153 per square mile on the same river to W. G. White for \$111 per square mile; three square miles on the same river to the same man for \$136 per square mile, and three square miles, also on that river, to the same man for \$126 per square mile. There was considerable competition for some berths.

Forest Exhibit Car Doing Good Work

The Canadian Forestry Association's Exhibit car was in Windsor N.S., and there was a very large attendance of interested visitors. The Association's Exhibit car is properly termed "a forest protection school on wheels." It travelled nearly 12,900 miles last year and was visited by over 250,000 people. It plans to cover all of Canada except the Prairie Provinces, and is in charge of Mr. G. Gerald Blyth, assistant secretary of the association. It carries motion picture equipment, and movies are shown each night in the open air, or in school halls or theatres.

The erosion model demonstrated the necessity of preserving timber on the water sheds. The fire illusion model automatically shows the woods before and after a fire. It is a splendid object lesson for the children. A considerable portion is devoted to forest entomology and many of the forests are shown and complete descriptions appended thereto. It is estimated that forest insects are doing damage each year to the extent of \$75,000,000 throughout the Dominion.

One of the most interesting exhibits was that showing many different articles made from wood fibre, such as neckties, shirt waists, stockings, potato bags, grain sacks. There was also a process exhibit, showing how matches are made.

Every nook and corner of the car is taken up with some exhibit.

No. 14

Stop the Export of Pulpwood

The Federal Government at its recent session provided facilities, which may be put in operation at any time, by means of an Order-in-Council, to prevent the export of pulpwood from private lands.

For many years there has been an agitation which, at first received but indifferent support, to preserve the natural growth and wealth of Canada's coniferous woods. These forests have been disappearing altogether too rapidly. Limit owners, farmers, settlers and others have grown too prodigal in their ideas of what constitutes caution and conservation. Fire, insects, storm and other enemies of trees have caused a waste of our national substance until at last we are aroused from our lethargy and becoming seized with the conviction that timber is much like good health. It is comparatively easy to retain if watched and taken care of, but once undermined, it is almost impossible to restore without a long, painful process.

Canada is destined to be one of the greatest, if not the greatest, pulp and paper country in the world. It is her one outstanding characteristic and distinction and no industry has developed with the same rapidity and solidity as pulp and paper enterprises. The exports continue to grow and are helping to place Canada on the map more than any other great national undertaking. No citizen who does not possess thrift, loyalty and foresight, ever becomes a factor in his community, and no country, which wastes its raw material, dissipates its natural resources and takes no thought of the generations that are to follow, will ever travel very far in world affairs or material expansion.

Canadians are now beginning to waken up to the fact that they possess something worth while and that no longer should outsiders come in and exploit raw pulpwood. In taking steps to make it compulsory that the unfinished material be converted into the finished product at home, more capital will be placed in circulation in the Dominion, more employment, both skilled and unskilled, will be afforded, and Canada will grow in population, prestige and power.

It is generally acknowledged that Canadians have not sufficient pride in their possessions. They do not evidence enough cohesion in great ideals or in material matters, and lack vastness of vision and optimism of outlook. It is time to be up and doing before it is too late and the Federal Parliament has at last been incited to action on a great national problem.

The only contention raised against the proposed prohibition of pulpwood export from private lands is that it might injure the settler or colonist by restricting his market and confine his sales of wood to Canada. It is understood that the regulation when it goes into

effect will allow considerable freedom to the settler whose chief source of revenue is his pulpwood, and that he will not be shut out from the foreign market at the present time by the embargo.

It has been well pointed out that no interest in Canada is going to suffer through an embargo on freehold pulpwood. The value of the product will not deteriorate and there will be just as much wood sold and used as ever as long as the supply lasts. The chief difference is that it will be disposed of to be manufactured in our own country instead of going to enrich another. It takes only about eight months to erect a pulp mill and, with a six months' period allowed before the Act takes effect, there will be ample time for readjustment. This latitude will permit of the shipment of all wood now on hand.

It is declared that the exports of pulpwood have been draining the country of its great timber assets and too swiftly has this vast natural and national kingdom been vanishing. The problem is not one of reciprocity, politics or reprisals, such as some public men would lead the people to believe. It is decidedly one of national self-preservation, standing up for one's rights and the inventories in our own household.

Canadians have at last started to take cognizance not only of the present but to give some heed to the morrow. It has been well said that in time of peace prepare for war. In days of plenty it is advisable to prepare for a dearth of material, which, while it may be deferred, may come sooner than we expect. We must learn to appreciate and properly appraise our natural endowments. He, who has no self-respect, will never be respected by others, and any country that does not uphold the protection, preservation and perpetuation of its splendid heritage, will sooner or later go down to oblivion and be numbered among the wastrels and wantons of the world.

Social Side of Association Work

One of the most notable developments of recent years is the expansion of the social aspect of commercial life. The old idea that, in trade, each man is a law unto himself, is being discarded, and replaced with one having for its basis the principle of co-operation and sociability. Through the media of trade associations and such societies as the Rotary Club, Kiwanis Club and others, men are getting into closer touch with each other, and extending their circle of friends.

The lumber industry is taking a foremost part in this movement. In Eastern Canada, Toronto led the way, followed by Montreal. The meetings, luncheons, excursions and golf tournaments all play a part in this cultivation of a better understanding between the various sections of the trade and between the members of those sections. There is no better means of eliminating business jealousies and of promoting harmony within an industry than these periodical social events.

The directors of the Ontario association were wise in their day and generation when they inaugurated summer excursions. The Province of Quebec Retail Lumber Dealers' Association has followed this excellent example. The excursion to the Saguenay, a report of which will be found elsewhere, was an outstanding success, and an event of this character is to become an annual one. Probably the Montreal Wholesale Lumber Association will next year be asked to make it a joint excursion. Those, who took the trip to the Saguenay, declare that it was one of the most pleasant excursions in which they have participated, and that it has done much in the direction of establishing a greater spirit of co-operation which is the foundation of a live trade organization.

What Lumberman Salesman Expects

Leaving aside orders, there are two things which a salesman values—one is courtesy and the other consideration of his time. He too often obtains neither. Many buyers, who have salesmen on the road, lack the quality of giving to men who call upon them the same treatment which they expect will be accorded to their own representatives. This is sometimes due to temperamental causes and sometimes because the buyer is trying to do too much. In the latter case it means that he has not sufficient time to see those who call upon him and involves a great waste of time to those who regard him as a prospect. Salesmen, like every one else, have to take their chances of seeing those upon whom they call, but they expect that their time will receive a certain amount of consideration, and that they will not be kept waiting for an unreasonable period. A division of work would appear to be the remedy.

There are buyers in the lumber trade, as well as in other industries, who give little thought to such matters. Their attitude is one of indifference to the time of those who call upon them. This subject may seem of small importance to some, but to the representatives on the road it means a great deal, especially when they have many calls to make.

New Sales Tax Goes Through Unchanged

It is understood that the federal sales tax on lumber, as originally proposed, will, in spite of the protests, arguments and other points raised by the Canadian lumber industry, go into effect January 1st next. One or two features have been added to the tax in that lumber imported into the country will be subject to a six per cent. tax on its duty paid value which, on remanufacture into the finished product, will be refunded.

The lumber interests put up a stiff fight to have the present tax of three per cent. retained and at one time it looked as if the proposition might be favorably considered. However, nothing was done at the last moment and Parliament adjourned with the new measure endorsed, which, in its ramifications, duplication and interpretation, is likely to cause endless trouble and misunderstanding in the way of adjustments overlapping and rebates. However, it is nearly six months before the measure will go into operation and there is no sense in crossing a bridge until one comes to it, or, as an easterner might say, it is time enough to shake hands with the devil when you meet him.

One lumberman humorously asserted the trade might offer up a prayer that so far as the Federal authorities and the sales tax are concerned, "from the ignorance and arrogance of those who make the law, may we be delivered."

It would appear that the chief clauses of the new sales measure, which will go into effect on January 1st, 1924, are as follows:

A manufacturer producing goods to the value of \$10,000 per year will be required to take out a sales tax license at a cost of \$2.00.

Wholesalers selling fifty per cent. of their sales to manufacturers holding a sales tax license will be permitted to take out a license.

The product of a sawmill will only be taxed when it is not to be used as raw material for "further manufacturing."

Shingles and lath, doors, sash, etc., will be subject to the tax when sold by the mill, being regarded as finished products.

A straight retailer, not operating a planing mill, will pay a price in which the manufacturer or wholesaler has included a six per cent. tax. That will be the end of it for him, as he will not have to collect the tax.

The retailer, who operates a planing mill, and who sells \$10,000 worth of "further manufactured" product per year, will have to take out a sales tax license. He can buy material for his planing mill without any tax upon it but, when he sells his "further manufactured" product, it will be subject to six per cent. tax. On his purchases of material which he intends to sell without putting it through the planing mill, there will be a tax when he buys and no tax when he sells.

The date when a refund on account of sales tax with respect to goods sold at a price fixed before May 12th 1923, is June 30th 1924.

It is said that the intention of the Finance Minister is that the tax shall not be shown in the invoice as a separate item, but shall be added to the price.

Another Well Known Lumberman Passes

Alex. Leishman, 36 Chicora Ave., Toronto, who for many years was a well-known lumberman, passed away recently. He was born in Lanark County in 1862 and was well known in Toronto, Woodstock, Galt, Orillia and Bracebridge, in each of which places he resided for some time. For several years Mr. Leishman was engaged in the lumber business in Woodstock and Galt under the name of Leishman Maundrell & Co., after which he was with the Rathbun Company, making his headquarters in Orillia. He retired from the forest products arena several years ago and was appointed city agent of the Continental Life Assurance Co. in Toronto.

New Retail Lumber Firm in Waterloo

E. Honsberger and A. S. Boyer have recently formed the firm of Honsberger & Boyer and gone into the retail lumber business on John St. North, Waterloo, Ont. The concern have erected a storage shed 44 feet wide and 48 feet long, with an office 11 feet by 16 feet in one corner. The shed is one-storey high with a pitch roof and gable end facing the street. The firm say they built this kind of a shed as they can easily add to the rear end of the building if in future they require more storage space. They pile their lumber on the flat in the shed and have bins on either side of the driveway which is 11 feet wide. The location of the yard is in John St. along the Canadian National Railway tracks.

Honsberger & Boyer have no siding but if the outlook for a successful business is what they think it is, they intend applying for one. They will stock all kinds of 2-inch hemlock for joists, etc., sheathing material, shiplap, etc. They have in their shed now dressed pine, both 1 inch and 2 inch. They are putting in a stock of fir, interior trim, flooring, moulding and ½ inch match. The firm have

also in stock shingles and lath, and have arranged to supply frames, sash, etc., in fact everything in the lumber line required for a house.

Waterloo has a population of about 6,000 people and about 75 per cent of the residents own their own homes. Honsberger & Boyer believe that prospects for trade are good and are now getting acquainted with the trade. Mr. Boyer the junior partner of the firm was for several years with the Wm. Shirton Lumber Co., of Dunnville, Ont.

Quebec Settlers and Forest Fires

The appalling destruction by forest fires in the province of Quebec and the monetary value sustained is causing much anxiety, especially in the minds of the limit holders and lumber manufacturing interests. There is no doubt but that the Government is doing a truly national work in the promotion of colonization and that every encouragement should be given to the hardy pioneers who penetrate the forests and remote sections of the province to clear land and make homes for themselves. But it is regrettable that the average citizen of the province has no conception of the value of forest areas and what they mean to the livelihood of the Canadian people, who in the thousands are employed in the lumbering operations, pulp and paper industries and other activities directly and indirectly connected.

A leading Quebec lumberman, discussing the situation, points out that the forests in the province, according to the statistical year book issued by the Government for the fiscal year ending June 30th 1922, netted the Government a revenue of \$4,004,432.15, and, of that amount, the stumpage dues and the ground rent paid by the limit holders, amounted to \$3,403,146.82, being the largest sum coming under any heading of the receipts of the province for that year. Classed as ordinary revenue receipts, the Government receipts that year were \$21,609,396.16, proving that the lands and forests mean 25 per cent. of the total annual revenue, not to mention the many millions which the public derive from industries which the forests keep in operation.

"It is a well-known fact," said the lumberman, "that the strongest advocates for forest conservation are the limit holders. They do not only preach conservation but they practice it along the most practical lines and annually spend hundreds of thousands of dollars in controlling fires and supervising work of all kinds and in reforestation.

"It must be admitted that the Government is also doing something in the work for forest protection, and during 1922 expended a total of \$318,000, but, even with that outlay, can it be said that the forest protection is adequate, in view of the tremendous fire losses? Are the large sums of money expended at all proportionate to the amounts which are spent upon colonization, and are all those expenditures to be set at naught by the criminal negligence of settlers who, in disregard of all regulations, are responsible for the conflagrations which annually devastate large tracts of timber areas?

"The government in 1921-22 spent \$2,000,000 to assist colonization while, during the same period, the revenue from lands sold to the colonists amounted only to \$107,365.50. During that year the Government built bridges and culverts and aided in the construction of schools, and when forest fires come, such as recently, a large percentage of these bridges and culverts are destroyed and have to be rebuilt.

"It is generally admitted that something must be done to remedy the situation as regards the colonists. The Government is responsible, and the system, now in vogue, is open to criticism. Although there are many good available farm lots, the colonists, in the majority of cases, insist on selecting lots with a thick growth of good wood.

"The existing law permits a colonist to clear five acres of standing forest off his lot a year, but, as the colonist finds that the sale of wood is more profitable than cultivation of the land, he, in many cases, is known to go far beyond the five acres allowed. Where the standing timber has been touched by fire, the law allows unrestricted cutting, and this is a loop-hole for the unscrupulous owner. He welcomes a little fire, which will permit him to cut all the timber that he chooses from his lot regardless of regulations, and he burns slash in prohibitive seasons, no matter what happens, so long as he reaps handsomely from his cut of wood.

"It is, therefore, clearly evident that the colonists or new settlers are responsible for the large percentage of the forest fires. The Government of the province must also accept a measure of the blame through failure to see that the laws and regulations in the aggregate are not enforced," concluded the speaker.

The man who is more concerned with what he gets than with what he earns, generally winds up by getting just about what he earns, which is less than he hopes for.

Link-Belt Company's Improved Wood Grapple

The wood grapple is without question the most effective and economical tool yet devised for unloading, piling and reclaiming evenly piled pulpwood and logs. It is usually handled and operated by a locomotive crane or double drum hoisting outfit, and is adapted for wood upward of four feet in length.

Earlier forms of grapples were crude and comparatively unreliable in service. With the demands of recent times for increased production and greater capacity, however, has come the development of grapples which are capable of a large volume of work, often under severe conditions.

Ever since the first Link-belt grapple was built in Chicago, more than ten years ago, it has been the company's desire and aim to improve and perfect its design and construction. The first grapples had cast steel arms and coil closing chains acting in combination with wide face closing drum. This construction was improved by a more scientific design of grapple arms and closing drum by equalizing the coil closing chains through the head yoke and in the drum guard. Still later the use of the flat link closing chain were found to be a decided improvement over the coil chains formerly used, both in strength and length of life.

In the latest design of the Link-Belt grapple, known as the "Improved Type," are incorporated all of the features and details which careful study and long experience have proved to be advantageous and desirable. The accompanying cut illustrates the sub-

The latest type of wood grapple

stantially reinforced, built-up, heavy section forged structural steel grapple arms, which give maximum strength and resistance against breakage and distortion when handling frozen logs. Logs and pulpwood, regardless of length, have a tendency to roll or slide into the grapple, the points or teeth being especially formed to cause this action. This insures full loads. The closing drum which is of steel to give long life affords long life to the closing cable. Fouling of this closing cable is prevented by the husky guard. The heavy and practically indestructible flat link closing chains are made of hardened steel, made especially for this service.

There are numerous other refinements throughout but the foregoing are the salient features of the "Improved Type" of grapple which will readily handle 5/8 cord of wood 8 ft. long, or a proportionate amount of shorter or longer wood. It weighs approximately five thousands pounds, empty.

How Fire Ranging is Far From Efficient

The ravages of forest fires in various parts of the country have directed attention of late to a more rigid system of inspection and more efficient organization in the matter of fire rangers. While progress has been made in the work, numbers and facilities of the fire rangers, there is yet a long way to travel before anything like perfection is attained, according to the facts set forth by an "Ex-Ranger" who now resides in Toronto. In a recent letter to the press he makes rather startling disclosures. Some timely and feasible suggestions are also offered and are well worth consideration. "Ex-Ranger"

says that, in view of the increasing loss from forest fires in Ontario, he believes that fire-ranging, discussed from the standpoint of the ranger, may be interesting and instructive, and continues:

The system of fire-ranging in use in Ontario at present is out of date and inefficient. The personnel of the provincial service is poor. The writer has several years' experience as a ranger and more as a bushman. He knows that the average man who is sent out to range is the old lumberjack or miner out of a job in the Summer time, or the student—though the latter class has been growing smaller. About seventy per cent. of the men on beats do as little work as possible, and for this the so-called "old-timer" is better fitted than the maligned student. The pay of \$2.75 per day, the ranger to board himself and pay his own railway fare, is not an inducement to the better class of men. There is no semblance of permanency in the service unless it be for chief rangers and their deputies. A man is on the job one year. If he can make more than the above pay he will not range next year. So very little pride or efficiency can be engendered.

The writer knows of cases of men being employed for canoe routes who had not the least idea of how to handle a canoe, let alone take care of themselves in the woods. How, with a personnel of this nature, can one expect to find an efficient ranging service.

It is not the fault of the chief rangers, who are conscientious, hard-working men, with too much territory to cover and the consequent inability to make frequent and unexpected inspections. The rangers are supposed to cut out portages, etc.—if they do this properly on most beats they will have little time looking for fires.

The inadequacy of methods is more or less apparent. Two men may have from 90 to 150 square miles of territory with no tower to watch from and with no telephone connection with headquarters in case they do find a fire. Under present conditions, if a fire gets a little start so that it is too large for two men to handle, they have to go by canoe or on foot to the nearest point of communication with headquarters—the return trip may take up two days—the fire in the meantime has got beyond all control. With telephone lines to headquarters, communication could be established quickly and help rushed to the scene of the fire while the two men could watch it and do what they could in the matter. The grouping of men in camps of four or six, with beats radiating from the main camp, would help there. There would always be a fair number on hand to meet the instant need. A fire that six men could control may be beyond control of sixty or two hundred in twenty-four hours.

The ranger is hampered by his lack of control over persons traveling in his district. A licensing scheme is the only one that would help this. For instance, the writer knows of instances when he knew to a fair degree of certainty the men who had started fires and when he was helpless to take action against them as there was a possibility of someone else being on the spot at the time. If an efficient licensing system had been in use, the names of men traveling in that part of the country could have been ascertained and the guilty ones arrived at by a process of elimination. It might even pay the Province in the long run if the onus of proving his innocence were put upon the suspect. Certainly any one acquainted with the North Country knows the utter indifference to possible fire damage shown by many of the prospectors, settlers and others.

Wherever the prospector goes, he carries fire and desolation in his wake, and a good many million dollars' worth of timber have been destroyed so that a few optimistic prospectors may explore their forty acres or so of rock with greater ease. Look after the careless prospector, then cancel his license if he can be proved to have caused a bush fire, and fine others heavily, not a mere \$50 or \$75, as the usual fine seems to be. Pay the rangers well and get as nearly permanent a staff as possible, thus creating a certain esprit-de-corps and consequent efficiency. Build observation towers and telephone lines, and augment these with aeroplane observation as far as possible. Re-group rangers so that an effective force may be concentrated on a fire at the shortest notice, and, by a system of frequent inspection, keep the men up to their work all the time. Then, the writer believes, there will be a lessening of fire-loss and a tremendous annual saving to the Province, despite the comparatively small additional outlay to cover these changes.

Thurston-Flavelle Mill is Coming Along

The Thurston-Flavelle lumber mill, Port Moody, British Columbia, which suffered from a disastrous fire about two months ago which destroyed about \$50,000 worth of cut stock and storage sheds, is now cutting about 100,000 feet of cedar a day. The mill is employing about 175 men. The storage sheds, which were destroyed, are being rebuilt at a cost of about \$40,000 and will be completed in about two months. Rainy weather for some time delayed the starting of re-construction.

Newsgraphs from Far and Near Points

A charter has been granted to the Bridgewater Lumber Co., Quebec, to buy, sell and carry on the business of manufacturing of every kind of wood and lumber and import and export the same.

The Welsh Lumber Co., 2219 Yonge St., Toronto, intend erecting a new planing mill in the near future. The structure will be of brick 50 x 40 feet, and will be well lighted and laid out on the most modern lines.

George K. Guild has established a new industry in Edmonton, and is producing a high stiff board for making a number of industrial products from waste paper, etc. He is turning out a pulp board pulley which is reported to be giving every satisfaction.

A labor mass meeting at Nelson, N.B., has appointed John Martin, M.L.A., of Chatham; Edward Tighe, of St. John, and A. Comeau, of Newcastle, a committee to wait on the lumber mill owners for a shorter day and higher pay. In case of failure to reach an agreement, a strike is talked of.

Fire broke out on the J. B. Snowball Company's timber limits on the Tabusintac River, about five miles east of the Bathurst road and about twenty-five miles from Newcastle. All afternoon automobiles conveying men and supplies left for the scene and at daylight next morning the 350 men were reported to have the fire under control.

The Toronto sales office of the Schroeder Mills & Timber Co., which is in charge of F. J. Archibald, will be removed from the Stair Building, corner Bay & Adelaide Sts., to Room 824, in the new Federal Building, Sheppard & Richmond streets, where larger and more commodious quarters will be available. Mr. Archibald expects to be located in his new office by August 1st.

Henry Atkinson, Limited, with a capital stock of \$750,000 and head office in Saint-Telesphore, County of Levis, Que., has been incorporated to carry on a general lumber, pulpwood, pulp and paper business and to buy, sell and deal in all products of the forest. Among the incorporators are Donald Cameron, Thompson Atkinson, William S. Atkinson and Henry C. Crawford, all of Etchemin, Que.

The outlook in the lumber business continues to be bright, according to T. J. Humbird, president of the Victoria Lumber & Manufacturing Co. Ltd., who was a recent visitor to the big mill at Chemainus, B.C., which is operated by this company. E. J. Palmer is the mill manager at Chemainus. Mr. Humbird is the head of several enterprises, and makes his headquarters at Spokane. The first six months of this year had seen shipments from the mills in which he was interested, equal two-thirds of the total output of the previous year.

P. Beauchemin & Fils, of Amos, Que., state that their cut this year in the Abitibi district will only be about one-third of the usual quantity. Production in the neighborhood will be about 20,000,000 feet and probabilities for the market this coming fall certainly look like an increase in prices. Beauchemin & Fils say their mill is running at capacity and, although they have difficulty in securing workmen, they manage just the same to fill the numerous orders which they have on hand. Good laborers are paid \$3.00 a day and up, according to their capacity. Recently the firm made some extensive repairs and put in new equipment which will allow them to double the production of their manufacturing plant and, at the same time, enable them to handle cars with more speed.

The Canadian Export Paper Co., Limited, Montreal, has issued a four-page folder in three colors, entitled "One Hundred Years Ago." The second page contains cuts of William Price, founder of Price Brothers, Limited, and John Saxton, founder of the "Canton Repository." A reprint of the first edition of the paper is inclosed in the folder. Brief histories of William Price and John Saxton are given. It is recalled that the former in 1817 began operations on the St. Maurice River and the south shore of the St. Lawrence, and that he gradually extended his activities into the north by way of the Saguenay, where he became the leader in colonizing and developing the virgin forest lands.

Demand continues for improved facilities for storing and handling Island lumber at a central shipping point in Victoria, B.C. A committee, composed of J. O. Cameron, president Cameron Lumber Co. and Genoa Bay Lumber Co.; W. H. Munsie, president Shownigan Lake Lumber Co. and J. W. Spencer, has been appointed to make an investigation and make the necessary representations to Sir Henry Thornton, president of the Canadian National railway, when he reaches the Coast. W. J. Bristow, of Comyns & Co., Vancouver, stated that owing to the lack of organization and facilities for handling lumber except at the Victoria tidewater mills, it was becoming increasingly difficult to obtain adequate tonnage to handle the occasional shipments that might be sent down from an up-Island mill.

Although plans for construction of a big sawmill either at Cowichan Lake or at Chemainus in connection with the present plant

were discussed recently between F. J. Palmer, manager of the Victoria Lumber & Manufacturing Co., and T. J. Humbird, sales executive of the Weyerhaeuser Timber organization, no official announcement of the company's decision has been made. The press has announced the proposed construction of a mill in the Bear Lake district of Cowichan Lake with a daily capacity of 450,000 feet per 8-hour shift. There is little doubt, however, that the Victoria Lumber & Manufacturing Co. is about to extend its operations.

A party of officials of Price Bros. and the Canadian Export Paper Co. recently visited Kenogami, Chicoutimi, Jonquieres and the site of the great power development now proceeding at the Grand Discharge of the Saguenay. The party inspected the paper mills of Price Bros., including the extension of the mill at Jonquieres. Price Bros. have a large interest in the work at Grand Discharge, which will develop power for the mills of the company, and is part of the programme for the extension of their pulp and paper interests in the Lake St. John district. Many million dollars will be spent in this development which promises to have an important bearing on the industrial life of that region.

Nigger That Got the "Unanimous" Letter

A scared looking darkey rushed into the sheriff's office, with a scrawly, unsigned letter in his hand, and said:

"Judge, Ah jest got to have pitection. Ah got a unanimous lettah heah and dis here niggah says he's fixin' to kill me. Ah got to have pitection."

"Let's see your 'unanimous' letter," said the sheriff.

It was a big nigger scrawl that read: "If you doan let mah wife alone Ah'm goin' to take mah razor an cut yo' black haid plumb off."

"Dat's dat unanimous lettah, Judge, an' Ah got to have pitection," said the scared darkey again.

"Why, you don't need any protection," said the sheriff, "all you got to do is let his wife alone and he won't hurt you."

"Judge," was the earnest reply, "you doan seem t' undastand. Dis here's a unanimous lettah. How do Ah know whose wife to let alone?"—Gulf Coast Lumberman.

Timber Should be Regarded as Crop

Whether timber is to be mined from our forests, without thought of replacement, like coal from our hills, or whether it is to be considered as a crop to be harvested and grown like other farm crops is the main theme of an article in the last Yearbook of the United States Department of Agriculture, entitled "Timber: Mine or Crop."

The article discusses very thoroughly the problems now confronting the country as a result of the lack of a forestry policy and the resulting depletion of the Nation's forests by logging operations and fire.

Nearly half the land area of the United States, some 822,000,000 acres, was originally forested, says the article, but the forested area has now been reduced to 138,000,000 acres of virgin forest, 250,000,000 acres of comparatively inferior culled and second growth, and 81,000,000 acres of barren land, a total of slightly less than 470,000,000 acres.

"Largely through timber mining," it continues, "the original stand of timber has been reduced from more than 5,200 billion board feet of virgin timber to 1,600 billion feet of virgin timber and 600 billion feet additional in culled and second-growth stands."

"Seventy-five per cent. of the remaining virgin timber is west of the Great Plains, and more than 50 per cent. of all the remaining saw timber is in the three Pacific Coast States, while nearly half of the lumber cut is consumed in the region east of the Mississippi River and north of the Ohio and Potomac Rivers. Lumber producing and consuming centers are so far apart that we pay \$250,000,000 annually in lumber freight."

The article traces the shifting of the timber industry from the East to the Middle West and South, and then to the West. The necessity for vigorous reforestation and for the conservation of the remaining forests is emphasized since, according to the article, the valuable timber supply of the United States is being consumed about four times as fast as it is being replaced.

Quebec Will Uniform Forest Rangers

Forest rangers in Quebec will be uniformed by the government, according to a decision arrived at recently. Gustave Piche, chief forestry engineer, received the first series of uniforms which are to be distributed shortly. The uniform is a greenish one with gold buttons and red stripes on the arms and shoulder. The collar is buttoned. Only forest rangers will be authorized to wear such uniforms, and though the distribution will not be completed this year, with a few months a great many of the forest rangers will be well equipped.

Will Restore Prestige of Red Cedar Shingles

The Timber Industries Council of British Columbia recently called a meeting of all branches of the lumber industry. The purpose of the meeting was to unite the industry in a determined effort to restore the prestige of the Red Cedar Shingle. The important fact of the meeting was the following resolution which was proposed by E. S. Sanders, General Manager of the Vancouver Lumber Company, and seconded by G. G. Johnson, President of the B. C. Loggers Association:—

"Whereas the report made by Mr. Whiting discloses a very serious position in the shingle industry, due mainly to anti-shingle propaganda, and

"Whereas it is evident that the propaganda will not be confirmed only to the prohibition of shingles, but will undoubtedly spread to other forms of the industry, and

"Whereas steps must immediately be taken to combat the false and erroneous impressions promulgated by this propaganda of persons and companies interested financially in the sale of other substitutes for wooden shingles, and

"Whereas the Shingle Manufacturers' Association of B. C. has already organized a line of defence:—

"Therefore, Be It Resolved:—

"That this meeting, composed of representatives from all the timber interests, support the B. C. Shingle Manufacturers' Association in their fight, and recommend to the B. C. Loggers' Association, the B. C. Lumber and Shingle Manufacturers' Association, the Pulp and Paper Companies, the Box Manufacturers, the B. C. Lumber and Shingle Wholesalers' Association, and the Timber-holders Association of B. C., that Committees be formed from each of these associations to meet the Executive Committee of the Shingle Manufacturers' Association to devise ways and means how best to accomplish the revival of the shingle industry, and the effective protection of the entire lumber and logging industry."

Budget of Briefs from Busy East

The rafting crew of the Nashwaak Pulp & Paper Company working at the mouth of the Nashwaak walked off the job recently and demanded an increase of fifty cents a day. The management refused and paid the crew off. Thirty-seven men left work. Foremen, scalers, etc., were not affected. The men had been receiving \$2.75 for a nine hour day and those living at the boom were boarded. The rafting operations, according to the boom manager, Thomas Jones, were to be held up a fortnight as low water in the Nashwaak and St. John rivers made it convenient for the suspension of operations. When asked if it were true that a new crew would be sent from St. John, Mr. Jones, said "no." He maintained that there were sufficient men about Fredericton to handle the work. Of the fifteen million feet of logs to be rafted for the Nashwaak Company eight million feet have already been handled.

That wage disputes in the building trades of Boston and vicinity have been settled on a basis of a two-year agreement was glad tidings to lumber manufacturers in the Province of New Brunswick. Owing to these troubles the great building programme was held up and now that peace has again been restored it is felt that work will continue and this should prove a boon to New Brunswick lumber dealers.

Only one new forest fire was reported to the Department of Land and Mines over the holiday July 1. This blaze was confined to an area of one hundred acres and was said to be under control. It was on the Red Pine Brook in the vicinity of Gloucester Junction on the C. N. R. in Gloucester County. The fire hazard on account of dryness, especially in the north of the province, where the rain fall was light, is again mounting, although no extremely serious situation has arisen from the fires which were placed under control during the wet period recently.

A commission has been appointed by the New Brunswick Legislature to hear a claim at St. Quentin, which has been made by J. D. McLaughlin of Red Rapids, N. B., against the Province of New Brunswick for \$75,000. Mr. McLaughlin claims this amount as the result of the destruction of his lumber mill and property at St. Quentin, Restigouche County, in May 1921. It is alleged that during the forest fire season Mr. McLaughlin had a crew of men engaged to protect his property but these were commandeered by the forest rangers in that district to fight fires there and, while they were thus engaged, his mill and other property were destroyed by fire. Hon. J. E. Michaud, member without portfolio, will preside at the hearing and the other members will be Messrs. Bentley of St. John, Smith of Queens, Young of York and Warnock of Victoria.

The Department of Lands and Mines has resisted pressure brought to bear in connection with the raising of the embargo on

travel permits for entering the New Brunswick woods. This is due to weather conditions which have increased the forest fire risk.

The Miramichi Lumber Company a few days ago had to send a large crew of men to fight a fire at Renous. This fire had been down for two weeks, but it broke out again. The warm breezy weather is making fire risk in that section serious.

A case in which Fred W. Cameron of Queenstown, is bringing suit for \$5,000 damages against Fraser R. Fox of Gagetown, for alleged "malicious prosecution" was started in Gagetown, recently. The affair is the outcome of a fire at Queenstown on September 10, 1921, in which about 40,000 feet of lumber owned by Fred W. Cameron and Alexander Watson, Ltd., was burned together with Cameron's cookhouse and motor car. Mr. Fox had a warrant sworn out for the arrest of Mr. Cameron at that time and also for Arnold Lyon of Hibernia, an employee of Mr. Cameron, charging the latter with setting the fire at his employer's instigation. Lloyd proved an alibi, and a "no bill" was found by the grand jury in the case against Mr. Cameron. Owing to various reasons the trial was postponed from time to time. It is creating considerable interest.

L. A. Gagnon, Chief Game Warden of the Department of Lands and Mines, has been conducting investigations in connection with the recent devastating forest fires, which occurred in the north of New Brunswick. As a result six men were arrested at St. Quentin and Kedgewick and were taken to Campbellton where they will be tried on charges preferred under the criminal code in connection with setting fires. There are still a large number of cases to follow as a result of various conflagrations, which wrought havoc in the province during the month of June. In some cases permits were said to have been issued for setting slash fires, but it is maintained that the provisions of these permits were not followed out.

Some trouble has arisen among lumbermen and mill operators on the Miramichi and their employees. The men are asking for a nine hour working day. At a meeting of employees held recently 500 men were present. The matter is still pending.

Aerial Economy in Forest Fire Control

Economy in the methods of forest fire control is to be a distinctive feature of the operations of the Canadian Air Force during the present season. Instead of patrolling the forests with a large machine, the method to be employed involves patrol by single seaters. Furnished with a wireless apparatus, once a fire is discovered instant communication may be had with the base, from which a large machine carrying men and fire fighting gear can proceed to the scene.

This, it was said at the offices of the air force, is along the line of experiments with which the force is blazing the trail for commercial enterprise. The air force has done considerable survey and forest fighting work for the different provinces during recent years. The provinces pay the cost of operation plus a small appropriation for depreciation in the machines. Last year Ontario paid a bill amounting to \$38,000, Quebec paid \$20,000 for such work and British Columbia \$5,000.

Difference Between Hard and Softwood

The question as to what constitutes a "hardwood" tree as distinguished from a "softwood" tree is often asked. Can we call the poplar a "hardwood" when its wood is so soft? And, conversely, can we speak of hard pine as a "softwood" when its wood is so much harder than that of the poplar?

This is a case where a term, apparently quite definite, has acquired an altered meaning in use. A "hardwood" tree is not necessarily a tree whose wood is hard, nor is every tree whose wood is hard a "hardwood" tree. Poplar, basswood, and tulip, or "white-wood," for instance, are all termed "hardwoods," although their wood is comparatively soft; and, on the other hand, hardpine and yew belong with the "softwood," although their wood is much harder than that of the "hardwoods" just mentioned.

The usage prevailing in the forest services, both federal and provincial, in Canada is to apply the term "hardwood" to a tree that bears bears leaves, such as the maple, oak and ash, as distinguished from those trees having needle-like foliage, such as the pine and spruce, or scale-like foliage, such as the cedar, which are termed "softwoods."

These latter are often described as "evergreens," though the tamarack, which is a softwood, sheds its foliage in the Autumn, and the madrona in British Columbia, which is a hardwood, keeps its foliage all Winter. Nor is the term "conifer" or cone-bearing tree, altogether satisfactory; the fruit of the yew (another softwood) has the external appearance of a berry. The botanical terms "Angiosperm" and "Gymnosperm" (as applied to trees), could they be popularized, would clearly define the groups of "hardwoods" and "softwoods" respectively.

Great Waste of Lumber Wealth

By M. N. Wright

Some Pertinent Observations by Practical Millman Regarding Potential Economy in the Manufacture of Lumber

The yearly log of one of the Pacific Coast's large mills—cutting No. 2 logs, shows a return of 65 per cent. of the solid content of the logs handled and, when they reached the market, 35 per cent. was lost in the process of manufacturing.

The grades were as follows: 40 per cent. clears—to dry house; 30 per cent. common—through planing mill; 30 per cent. rough—sold undressed.

Some of the losses were figured thus: Kerf sawdust 15 per cent.; in drying 5 per cent.; in planing 10 per cent.; in yard 2 per cent.

The mill owner does not stand this loss but the logger does as this particular mill shows for the year an overrun of 9 per cent.,—or, in other words, it did not pay for the solid contents of the logs. The scale rule is so figured that a log scaled to the millman at 900 feet will give the operator a return, if properly manufactured, of 1000 feet of saleable lumber. Now is there no way that the forest wealth of the world that is fast disappearing, can be conserved?

Some years ago several furniture factory owners combined and bought a shipload of mahogany logs. They had them sent to Great Britain to be sawn. The logs were sawed alive with a gang saw—using very thin heads, (and if my memory serves me right, the saws were 24 gauge.) After being sawn, the contents of each log were placed together and hooped with iron bands and again slung aboard ship for passage to Canada.

It was found that there was no loss from splitting or warping and that the loss from saw kerf was less than 10 per cent. For every 1000 feet of logs bought in the South, the furniture factory owners had landed in their yards in Canada 900 feet of lumber. This lumber was conserved, nothing but the bark was lost, and this was removed before the logs were shipped.

The mill already referred to, cut during the year 1922 in round figures 50,000,000 feet of lumber. Suppose by some change in mill construction and machines, the loss of 35 per cent. of the solid contents of the log was cut down to 25 per cent., the mills output would then be 5,000,000 feet more. This extra 5,000,000 feet would net the mill \$30.00 per M.,—a tidy sum to add to the profit side of the year's transaction.

The Average Through the Planer

Can this be done? I believe it can. Spend a few hours in any of the large mill yards and watch the planer feeders passing 2 x 4 and other sizes through the sizers. Put your rule on these and you will find they average considerably larger. Possibly 2-1/4 x 4-1/4 would be the measure of 50 per cent. of the run, and, at the other end of the planer, you find a finished product of 1-5/8 3-5/8. The same applies to 1" lumber. 50 per cent. of this would measure in the rough 1-1/8" thick, to finish 3/4" thick. Fast feed in the sawmills makes this over-size necessary as the saws snake more or less in cutting, and to make sure that all will be stout enough to dress, liberal allowance is made.

The mahogany owners had the 1" boards cut small inch thick and easily got a finished thickness of 3/4" in their factories. In place of having their boards put through an edger, they left them the full width of the logs, many of them running from 24" to 30" wide.

Why would it not pay the millmen to manufacture the lumber for the trade in standard sizes; door stock cut close to size and run to exact sizes; sash stock the same, using up all the mill shorts in this way.

Hardwood millmen are being compelled by scarcity of timber to manufacture down to the smallest piece to make ends meet. Furniture and other trades are delighted to buy in large quantities smalls and shorts cut to rough size for their different products, enabling the millmen to cut up even the slabs into some useable and saleable material.

Softwood Men and Wastage

The soft wood mills will have to face this same problem in the near future. Logs are scarce to-day and are going to steadily (even if slowly) advance in price until the day will arrive when the mill owner will turn a piece of bark over several times to see if he cannot make something out of it. The good material sent out through this mill's wood yard would, if utilized, supply a toy factory with all the material to keep a staff of 150 toy makers busy the year

round. Could not other use be found for this material before it reaches the stove wood grate?

Twenty-five years ago I was making a specialty of manufacturing hardwood chairs with a one-piece solid seat. To get this material it was found necessary to buy from the farmers, chiefly in the winter time, short hardwood logs to be cut in our factory. The planks were carefully cut 1-3/4" thick and planed on one side to 1-5/8". The balance of the logs were cut in chair stock for the lathe in sizes down to 3/4" x 3/4", and still smaller pieces, 1/2" x 1/2" for dowels, were made, so that little of the logs beside sawdust and bark reached the steam boiler furnaces. The man, who can show the softwood millmen how profitably to cut down as close as we did the hardwood or to get 80 per cent. of the solid content of the log, will surely be in the millionaire class in five years. I have not sufficient knowledge of the mill business to attempt the job, but from recent investigation of present methods, I am astounded at the enormous wastage.

Keeping Ahead of Mail Order Houses

As a rule men who study selling methods and go after trade in a scientific way are not generally disappointed in results. Every line of goods on the market has stiff competition to meet and the retail lumber merchant is no exception. He must study selling methods as carefully as do the automobile companies, the talking machine people and the furniture men. His strongest or perhaps it would be better to say his most aggravating competition is that of mail order houses. The catalogues issued by these concerns are well illustrated giving the sizes of the different articles, their prices, the kind of wood used, etc.

Retail lumbermen in the smaller centres where these catalogues are more frequently found say they do not fear the mail order firms, and yet business is being taken from them every day. They say that their prices are just as attractive as the catalogue quotations. In fact on some items, such as doors, they are cheaper than the city firms. What then is the inducement for the suburban public to buy from outside concerns. Surely it is not because of ill feeling toward the dealers of their own town.

Irrespective of prices, a well illustrated catalogue whether it be representing a jewelry concern or a company selling wood products is a fine advertisement and good salesman. The prospective buyer has before him generally, a picture of the article, say a door, giving the different sizes and the corresponding prices of each. All the particulars about the wood and how it will look when finished are given the prospect right in his own home. No wonder, with so little trouble attached to the purchasing of any article, that these catalogues are drawing plenty of business. The service which the catalogues guarantee, and the customer really receives is another question. But it is known that the catalogues are creating business. Their advertising is fructifying to those who issue them.

A splendid idea employed by an Ontario retailer who also manufactures millwork, reached the editor's desk a few days ago. The dealer had apparently decided to beat the mail order people at their own game. Each month he had planned to reach his prospective buyers by feature advertising and circulars. In this way the people of his district would have definite knowledge of his stock and prices at their finger ends. Monthly he featured some particular article of millwork. The articles advertised in this way are illustrated and accompanied by particulars about their general appearance and construction. The prospects in this man's community are no longer allowed to become worshippers of the catalogue. They now have home prices with which to make a fair comparison before trusting their money to strangers.

Another feature of the publicity is the listing of the sizes in stock which affords anyone not familiar with millwork figures something definite. The June circular which the "Canada Lumberman" received featured a pair of garage doors with six lights each and a panel of 3" v-jointing. The illustration was an actual photograph of the finished product. These doors were offered at a special price for the week of June 4th to 9th and no doubt prospective garage builders lost no time in investigating after receiving the attractive announcement.

Advertising That Originates from Current Events

Bits of News May Often be Dressed up to Make Excellent Publicity

Isn't it a fact that not only women, but men like to hear and talk about other folks? And they like to read about other folks too, and the more personal the reference is, the better reading it is. That's why scandal stories are so popular among the women.

The personal touch is an old friend to newspaper writers. In fact personal views must have been the medium through which the first newspaper was founded. And yet how many of us who are trying to attract the attention of the public in a commercial way, have entirely forgotten that the personal touch in our advertising has the greatest pulling power of all.

Very often when we prepare advertising copy to appear over our name our foresight is so short, and we are so obsessed with the idea to say that "Our product is the best," that we entirely neglect to analyse our advertisement to see if we, ourselves, would be compelled to read it, if disinterested.

Another way to look at it would be this: suppose you have made a new acquaintance and you find, after a few minutes conversation, that you have nothing in common with him. What happens?

There is nothing to hold you together and so you part to find more agreeable companions. It is the same in advertising, if there is no human, everyday way for your readers to get acquainted with you and your business, it is all the harder to make an impression upon them.

Did you ever notice in a street car or public place how many people are either reading the picture, sporting or comic pages? The writer doesn't mean to insinuate that these are the only parts of the paper read, for that would be foolish. But there is no doubt about it, that these sections are more widely perused than any others. Why? First, we'll take the illustrated section. Pictures always attract the eye much more than just plain print. But pictures of people who do unusual things or who are well known to everybody, are always read with interest.

Next take the comic page. If international advertisers could get the public to talk about their product one-tenth as much as they do about Andy Gump and his family their fortunes would be made.

Then there's old King Tut. Why is this ancient monarch's name on everybody's tongue? Isn't it interesting to read about a man who lived practically like ourselves three thousand years ago and was found in mummy form along with all his royal belongings. It certainly is a common ground for every class to talk and read about. These are only a few of the most outstanding examples of how people like to talk and read about things that are human; subjects which they can thoroughly understand and enjoy. Many copy writers have even appropriated King Tut news to brighten and attract readers to their advertisements.

The accompanying advertisement is similar to the methods used by a prominent Canadian advertiser who is making good use of the personal touch in his publicity work. This is only one of the hundreds of ways that may be employed to make copy really attractive to the average reader. Advertisements of this type cannot fail to be read, especially if they are followed by others equally as interesting. Indeed, they often become a source of news to readers who look for them upon receipt of each issue of the journal or newspaper.

The Message Paramount

But it is well to remember, however, that the personal touch is merely the lead up to the announcement you wish to make about your merchandise. Here is where the person preparing the copy must bring into play all his knack of producing pleasing literature, to make this link a non-stop-off point until the real message is put across and the reader has correlated your product with the entertaining paragraphs he has just finished reading.

It is surprising how easy it is to prepare something interesting for your readers along the lines mentioned above in comparison with the "deep stuff" that so many advertisers resort to. A good point to keep in mind when planning your publicity is to give your readers something new to read about as often as possible. This does not necessarily entail a lot of work. Getting the viewpoint of what constitutes interesting reading is half the battle, the rest will follow as if you were relating a story to a friend—just do it like that. It goes without saying that space that has a frequent change of copy will be read more widely than the one which remains unchanged. We think it funny to be caught reading a yesterday's paper. Why do we? Because we have already read it. It is old news. We want to learn something that's new. Surely that is a hint that sticks out like a sore thumb, why advertisers should endeavour to have something different to tell their readers as often as possible.

Whether through misunderstanding or some other peculiar reason, advertisers very often think that a change of copy will mean an additional expense. On the contrary newspapers and journals are particularly anxious that their advertisers should make their space as bright and interesting as possible. As a confirmation of this it is well known that journals and newspapers employ service departments to assist their advertisers in preparing attractive and bright copy. It is up to the advertisers to make profitable use of this service.

While this particular type of advertisement is illustrated, the "Canada Lumberman" does not mean to hold it up as a paragon.

Frank L. Woodhouse

—Just Got Back from My Vacation

I KEPT my eyes open purposely on my holidaying down at Miami, so's I could tell you folks on my return about the homes they have in the land of sunshine.

One afternoon about a week before leaving for home we motored out around the suburbs of Miami to see some of the historical spots and get a first-hand look at the homes the southerners live in. One point very noticeable is that most of the homes are built entirely of wood. The beautiful designs they are able to produce in true emulation of the old southern mansions, entirely eclipse the most attractive of our moderate priced brick bungalows. Of all the architectural styles the colonial is the most popular. The numerous old show places, usually the homes of old southern families, with their long snowy white pillars

and surrounded by beautiful magnolia trees are a sight not soon forgotten.

Building activities in the south are in full swing and although prices have advanced, dealers are confident that homes and other buildings will continue to be erected. One good feature of the southern market, when I left for the north, was its steadiness.

While away I took some very good photographs of typical moderate priced wooden homes along with some special plans and would be glad to show them to you the next time you're down our way, or when you're sending in your next order for some of our carefully graded pine and hemlock.

Yours truly,

Frank L. Woodhouse,
Pres. Goodwood Lumber Co.

THE GOODWOOD LUMBER CO.

Debt Canada Owes to Pioneer Lumbermen —Influence of the Forests—

By Dr. C. D. Howe,
Dean of Faculty of Forestry, University of Toronto

Dr. C. D. Howe, Toronto

A little meditation reveals to any man the fact that his environmental conditions have a marked influence upon his life. Sometimes his development, his career in business or profession are much more a product of his environment than he would care to acknowledge. Passing from the unit to the mass, we find that races of men and nations have been largely guided in their development, industrial and social, by their environment—our own country is an excellent illustration in point. The climate makes a hardy people; the extent and fertility of the soil make an agricultural people; the varied and luxuriant forests make a wood-working people. The richness and availability of the ore deposits make a mining people. The farm, the forest, the mine,—

these engage the attention of much the greater portion of our people and they have placed their imprint in some form or other upon us all.

Of all the fashioning factors of environment probably none has had a more profound influence upon the human race than the forest. Our remote ancestors of Asia and Europe worshipped in the forest and singled out certain trees, such as the oak, ash and pine, as objects of adoration. They filled the forests with good and evil spirits, with fairies and goblins. The tree is the symbol of life's creative power or of the origin of good and evil in many religions besides our own. The tree or some part of it has been the symbol of victory or peace since the beginning of strife among men. The tree motif, with the significance indicated above, is found in the architecture of most peoples. The trees and forests have appealed to the artists and poets of all ages. Trees in some mysterious manner penetrate to the soul fiber of the men who come into contact with them.

Influence of Forest upon Life

The history of Canada in relation to the forest has been no exception. Who can measure the influence of the forest upon the life and development of the Canadian people? Who can tell how much it has added to the romance and adventure of the early days of exploration and settlement? One needs only to refer to Champlain, LaSalle and Iberville, to the voyageur, the fur trader, the later French colonist, and to the conquest of the forest in Upper Canada by the English-speaking people to recall the vision. The struggles with and adventures in the forest developed hardiness and certain traits of character manifest even to this day—and we are grateful for that.

Indeed, I would be remiss if I referred to this matter only in the past tense. In fact, the utilization of the forest, the development of the lumber industry, notwithstanding its frequent failures and tragedies, has been a romance of first magnitude. The lumber kings and timber barons of a generation gone were decisive, and often picturesque, factors in the industrial—and sometimes political—development of the country. Within the past decade a phase of forest utilization has experienced a most phenomenal growth. The development of the pulp and paper industry can only be numbered among the greatest industrial romances in these times of great achievements. The men who have built up and maintained these great enterprises are not alone mere captains of industry; they are generals of great armies; they are monarchs of extensive realms. Their holdings are often larger than some independent countries on this continent and larger than certain principalities of Europe, and I doubt not that their financial budgets are larger. The happiness and welfare of whole communities, in the aggregate of many thousands of people are in their hands.

In fact, the influence of forest utilization upon community

development is more intimate than most of us realize. We are all familiar with the fact that in the early settlement of Eastern Canada the forests were destroyed to make way for agriculture. The markets for wood products being few and far between and the forests being abundant and practically continuous in extent, the forests were destroyed in a very literal sense. We are not so familiar with the fact, however, that actual forest utilization has made settlement possible. If we go back to the early days of the lumbering industry, we find that it paved the way for agriculture.

Lumbering Paves Way for Farming

I have lately been reading the history of the administration of the Crown lands in Eastern Canada, and I have been impressed by the fact that the license system of handling timberlands had its origin in the necessity of clearing away the forests in advance of agricultural settlement. Many of the fine farming counties along the St. Lawrence and its larger tributaries and along the shores of the Great Lakes have been prepared for settlement by the lumberman. We have a modern illustration of the same process in the southern portion of the great Clay belt. Some of our railways were first built as logging railways. The settler followed them up because they gave him a ready opportunity to get his produce to market. Most of us will recall a striking example of such a railway being incorporated into a through line to the West. There are many prosperous communities in Eastern Canada that owe a deep debt of gratitude to the pioneer lumbermen. We must, also, bear in mind that the enterprise of the lumberman has furnished as a whole cheap building material for the settler and all the farmers of the country and he has thus contributed directly to the upbuilding of the agricultural interests.

So much for the policy of selling timber preparatory to the settlement and development of agricultural lands; now let us examine the working out of such policy for lands unfit for farming. You know that between the agricultural lands of the south and those of the north lies an enormous extent of country where the underlying rock is so near the surface and the deeper soils so sandy or stoney as to render them unfit for farming purposes. Such soils nature designed for the raising of trees and only for the raising of trees. Between the natural forest soils and the soils capable of raising profitable farm crops lies a widely distributed class of soils intermediate in character. These soils may give abundant crops for a term of years, usually very brief, and then wear out. They, at first, give hope to the settler, but their declining fertility soon leads to discouragement. Then follows a period of tenacious hanging on in dire poverty and finally abandonment either by the settler himself or by his children. Soils of this kind have a potential agricultural value, but not for the pioneer. They are adapted for certain specialized crops and can be worked profitably only when within short hauling distance from large centers of population. It is probable that several generations of trees could be raised upon these intermediate soils before the population of the region becomes sufficiently dense to justify their use for agriculture.

Settler Follows the Lumber Camp

Both the settlement and finally abandonment of the inferior agricultural soils have been stimulated by the lumber industry. The settler follows the lumber camp into the forest; he is especially inclined to locate about depots and headquarters of logging districts. Sometimes small farming communities establish themselves about the larger depots. For several years the settlers find a good market for their produce with the lumber company. Since our forests are regarded as mines to be abandoned when the commercial timber is cut, the lumber industry is of necessity a roving one. When the timber is cleaned out of a district, the camps and depot sites are abandoned and the business re-established in another district. The withdrawal of the logging operations takes away the settler's local market and leaves him no outlet to distant markets. He is thus reduced to extreme poverty and he ekes out existence for himself and family by hunting or trapping or by getting employment in the winter in distant lumber camps. His children are far from school or church and they often grow up without the influence of either.

This process of cutting the forest clean from non-agricultural

soils, moving on to other sources of supply and leaving a scattered and depauperized population behind, has been repeated over and over again in Eastern Canada. Instead of encouraging and stimulating community development, the unstable nature of the lumbering operations has strangled it. Not only the hope of the soil, but the hope of the forest, also, has been destroyed. It was cut with no provision for another crop on the same area and as a general rule the efforts of nature to reforest have been made abortive by repeated forest fires. The result of such a system of forest treatment is to be found in thousands of square miles of barrens, semi-barrens and inferior forest growth through which is scattered an isolated population, without permanent employment, with few churches and schools and few contacts with outside markets. Their conditions of life are exceedingly hard and not of their own making. They are the victims of a public policy towards the forests, over which they had no control.

The Rise and Fall of Lumber Centres

The disastrous effect of a forest policy which compels the lumber industry to migrate from place to place is to be found not only in the forest itself and on the farm, but, also, in the larger towns. Throughout Eastern Canada there are many towns once growing and prosperous, but now declining and discouraged because the sawmill, or other wood-using establishment, has gone out of business, through the failure of forest supplies. They are in the condition which the commercial traveller so aptly designates as "dead." Many other towns have been saved from a like fate by the coming of railway shops, by development of the waterpower site or because their geographical situation made them natural trading centers for developments in agriculture, mines or pulpwood farther to the northward.

The older men will at once recall illustrations of what I mean, but for the benefit of the younger men let me give one example. Forty years ago the town had a population of 1300. Then came a sawmill or at least the old mill was rejuvenated and enlarged. In ten years the town had a population of 3,000 and in another decade it had reached 3800. From this point the output of the mill declined and about 15 years ago the work became spasmodic and finally the mill went out of business because the river valley had been logged out. The population decreased with the declining fortunes of the mill until now the town has less people than it had 40 years ago. Stores and shops have been abandoned; whole streets have vacant, tumbled-down houses. Discouragement and despair are written everywhere in that village—in the faces of its people as well as in the condition of its streets.

This town, like many others, is the victim of an administrative policy on the part of the government which regards a forest only as so many trees to be cut and not as a restorable resource capable of producing crops indefinitely when properly treated. The river valley had and still has forest soil enough to support three such towns as the above at the time of its best development, under intelligent use and conscious effort to keep the forest continuously productive.

Community Development Based on Wood

The influence of the forest on community development is something very real and tangible in the cities and older settled portions of the country, as well as in the more rural and pioneer districts. In fact, our whole development, industrial and social, is based upon wood. Not long ago we spoke of the age of steam and the age of electricity, but now we are in the age of wood, the product of the forest. We can neither eat or sleep with comfort without coming into contact with or using in some form the products of the forest. We cannot go to business or use the materials of our office without being impressed by our dependence upon wooden articles. Even in our relaxation at the movies we look at impressions on a film, into whose composition a wood product has entered.

Notwithstanding the popular conception to the contrary, we are becoming each year more dependent upon wood products, instead of less so. The introduction of substitutes does not keep pace with new and extended uses of wood. I believe this ratio will be maintained for years to come. I mean the forest has not yet rendered its maximum service to the industrial needs of man. As I have already indicated, the forest forms one of the chief supports of our economic structure, being second only to agriculture as a wealth producer. Yet through indifference and ignorance we are letting that support slip out from under. The impending disaster will be great; it will, also, be unnecessary.

Several indirect influences of the forest are important in the development of the community. Thirty or forty years ago the greater portion of forestry propaganda concerned itself with the beneficial effects of forests upon climate and streamflow. Then followed a period in which it was believed that data in this regard had been misinterpreted and exaggerated. But now the pendulum is beginning to swing toward its original position. The extraordinary devastation that has taken place in the past two decades in which

not only the forest has been removed, but in many cases the soil that bore it, has led scientists to re-examine their data with the result that many now believe the forest does exert a beneficial influence upon the humidity of the air in adjacent open areas, that the forest cover regulates drainage and the flow of streams. There are many evidences of this in Eastern Canada in the drying up of wells and streams. These may be transformed from intangible to very tangible influences upon the community, when they modify waterpowers, the navigability of streams and production.

How People Love the Green Forest

An increasing number of people visit our forests and forest parks each year for recreational purposes. This influence of the forest in giving renewed health and vigor to thousands cannot be measured. And they give more than this. They give a point of view, a philosophy of life that is beyond price to the community. It is the green forest that people love, not the burned and fire scarred. We hear no more common regret among tourists and campers than that such and such lakes have been spoiled for their purposes by forest fires. It seems to be the ultimate fate of most of our forest areas that they shall be burned. If this devastation goes on the playground function of the forest will largely cease, and the penalty in weakening the moral fiber of the community will be great.

Let us return now to the consideration of the treatment of our forests.

The natural forest soils and the intermediate soils in Eastern Canada probably comprise some 150 million acres and they far surpass in extent the purely agricultural soils. Much the greater portion of our timber and pulpwood has come from soils of the above mentioned class, yet in Ontario at least they are cut under a system designed for agricultural development after the lumberman had finished his work and in no Eastern province is there an adequate provision on the part of the government for the re-establishment of the forest removed by the lumbering operations. The results of such a policy, already being acutely manifest in Eastern Canada, are as inevitable as they are logical.

It is far from my intention to belittle the splendid work in forest planting now being carried on by certain pulp and paper companies, nor the magnificent program of reforestation now in operation at the instigation of the Ontario government, nor the results of a fixed diameter limit in cutting operations as enforced by the governments of Quebec and New Brunswick. They are, however, only subordinate parts of a really adequate and effective forestry program.

What Adequate Forest Policy Means

By an adequate forestry program I mean one that will keep our forest lands continuously productive in terms of commercially valuable trees. An effective forestry program for this country can never entirely depend on the planted product of worn out agricultural soils or of burned out forest soils; its broad foundations must ever lie in and rely upon natural forest soils as maintained in the forest. Forestry to be successful should chiefly concern itself with forests, not with barrens. The fixed diameter limit, in spite of some advantageous aspects, does not insure the regeneration of commercial species—and such regeneration is fundamental in an adequate forestry program.

We can, if we wish, let matters run on under their present momentum until they exhaust themselves. We can calmly watch the passing of spruce as we have watched the passing of white pine as a leading lumber product. We can sit back and take only what nature undirected may give us, just as the farmer might have done and just as the manufacturer might have gone on without improving his processes. We can, of course, use inferior woods. We can furnish our houses with slats sawed from poles and saplings; we can make paper of willow soots or even from grass. Such arguments, however, are not worthy of Canadians. They indicate a vision on a par with that of the men who forty years ago argued that the Western prairies were little better than deserts and would never support a farming population, or the men who twenty years ago claimed there could be no rich ore deposits in northern Ontario because the rock strata was not the proper kind, or the vision of the men of more recent date who claimed that aircraft could never be successfully used for aerial patrol or for forest mapping.

Men of Vision Have Built Canada

No, the arguments of the timid have never prevailed for long in Canadian councils. The history of Canada is largely the history of men of vision who had faith in their vision and worked for its accomplishment unceasingly. It is as true today as in the days of the early French explorers, or in the time of the struggle for responsible government, or the days of the Confederation fathers; it is true of those who settled the prairies, who developed the mines, and

of those who built up the great lumbering and pulpwood industries. I feel confident that the same quality of vision will be displayed in the co-operation of the lumbering and pulp and paper interests and the government in bringing about an effective forestry program based upon an adequate regeneration of the commercial species as a result of the logging operations. Such a program would naturally vary with varying conditions, but its general principles would be of uniform application. In justice to the operator, it, also, should be of uniform application in all the Eastern provinces or, at least, for each class of products competing for the same market.

An effective forestry program would doubtless restrict somewhat the present methods of cutting which would mean that the cost of the product would be higher, but the public would be the beneficiary of a sustained yield and, therefore, it would be reasonable to ask the public to pay for it in higher prices for lumber, pulp and other forest products. The prices under an adequate, controlled yield, however, would be more uniform and cheaper for the public in the long run than the inevitable panic prices under the knowledge of vanishing supplies from the forest just as the individual pays for security from loss of life or health or loss from the destruction of his buildings from fire. The sooner the public understands this, the better for all concerned.

Would Maintain Continuous Business

Under an adequate forestry program we could meet our present demands indefinitely, or in other words our present half billion dollar business in forest products could be maintained each year so long as the sun shines and the rain falls. Is not that an object worthy of a great deal of thought and effort, especially when we know that under the present treatment of the forest the lumber and pulpwood business can not be maintained at its present level very much longer?

There is another consideration. We are growing rapidly in population and will undoubtedly consume larger quantities of forest products—a probable increase which our forests will be absolutely unable to supply if present methods are continued.

There is still another consideration. Our outside markets are growing. In fact, they already consume a very large portion of certain products. Why not prepare for extended markets in the future, or in other words, why should not this country go into the business of raising forest products to compete in the markets of the world as wheat, beef, butter and cheese for the same purposes? Nature could hardly have done better by us in preparing the way for conscious effort in continuous forest production.

We have a climate that grows trees with fair rapidity. We have 150 million acres of soil in Eastern Canada better adapted for tree crops than for farm crops. And think of the transportation facilities in that vast area! At the southern edge of it, a great river already navigable to ocean traffic for nearly a thousand miles inland. Navigable to boats of 14 foot draft for an additional 1400 miles inland. Perhaps some day navigable for the entire length of 2400 miles by ocean-going freighters, if the proposed St. Lawrence ship canal ever becomes more than a dream. At frequent intervals along the entire length of this great river, tributaries come from long distances to the northward. Some of these tributaries are great rivers themselves nearly 800 miles long and furnish log-driving channels for more than 80,000 square miles of forested country. These river valleys, also, form natural routes for railways that penetrate into the hinterlands. At least three through lines traverse a large portion of the area from east to west. No other forest region of its size in the world is so accessible by water and by rail.

With an adequate forestry program, we could in the future replenish the diminishing supplies in the Eastern states with lumber and paper made in Canadian mills by Canadian labor. We could doubtless extend our lumber trade with Great Britain and there are also South American markets that might be still farther developed.

No other forest region in the world contains such a large number of commercial species and so widely adapted to various uses, or has so large contiguous areas so well provided with transportation facilities and so easily accessible to great and growing markets as that of Eastern Canada. This vast area properly stocked and under intelligent use for forest purposes could supply the markets of the world. Shall we accept the challenge which God in his wisdom has laid before us?

Now, to recapitulate, I have tried to point out to you some of the influences which the forest exerts upon the individual, the community and the nation. The greater portion of Eastern Canada was designed by nature for the growing of forest and nature originally covered this area with a magnificent and valuable forest. It was a great heritage, but now greatly impaired. Our great task is to restore it and maintain it and establish within its boundaries a permanent population and permanent industries. The forests have played a major part in the upbuilding of our country. They form today the broad foundations of our industrial prosperity.

Assumes New Position With Holt Co.

Guy H. Hall, Peoria, Ill.

Guy H. Hall, formerly director of the National Institute of Progressive Farming has been appointed as manager of the Division of Public Relations and Sales Promotion, newly created by the Holt Manufacturing Company of Peoria, Illinois and Stockton, California. On July first Mr. Hall relinquished his directorship of the Institute in Chicago and assumed his new duties with the Holt Company. For more than ten years Mr. Hall has been an industrious champion of the tractor industry. Previously he had been engaged in the motor car business in Kansas City, Missouri. With his brother he became a widely known distributor of tractor power in the districts surrounding the western Missouri metropolis. Then, to better promote

the cause of power machinery, he became one of the organizers, and secretary of the Kansas City Tractor Club which organization conducted the National Tractor shows for five years. Through this connection with the National Tractor shows he achieved huge success in his ambitions to educate the agricultural public to the advantages of power machinery as applied to the scheme of better farming.

When the National Association of Farm Equipment Manufacturers decided to create an organization for the common good of both manufacturer and consumer, Mr. Hall was requested to fill the post of Director. In the period of one year and a half as directing head of the National Institute of Progressive Farming he has accomplished valuable results for the entire tractor industry in its relations with the public. It was decided that the Institute must operate unbiased as between tractor and horse power and under Mr. Hall this policy of education to the fact that both the tractor and the horse had their proper place in business was carried on successfully.

Fires Kill Freight, Declares Thornton

"If a man wants to add to the burden of the Canadian National Railways, let him start a forest fire this year," says Sir Henry Thornton in a statement to the Canadian Forestry Association.

"The forest is a main pillar of our freight business and tourist travel. I appeal, therefore, to every Canadian to protect the forests."

The lines of the Canadian National are the greatest carriers of forest products of any railway in the world.

The latest record covering twelve months shows over 11 million tons of lumber, pulpwood, logs, posts, ties and paper. This compares with 5 million tons carried by the Canadian Pacific.

The total traffic supplied by the forest to all Canadian railways for twelve months was in excess of 22 million tons.

No Canadian commercial interest is so intimately identified with the safety of the forests as a railway carrier. From the millions of wooden track ties, the scores of thousands of telegraph poles, the fifty to sixty million feet of lumber for buildings and repairs, a modern steam road is a forest creature and cannot run a mile until it first has called on a timberland for essential supplies.

The future of the railroads is so intimately tied up with maintenance of the forests along their lines that experts look upon every forest fire in railway territory as having the most serious possible bearing upon their earning capacity.

With every timber tree taking on new value in a rising world market, the forest resources, which the C.N.R. and C.P.R. tap throughout such a large part of their territory, promise to develop freight traffic far beyond anything as yet realized. The "fly in the ointment," however, is the fearful record of forest fires, most of them set by campers, fishermen, prospectors, etc., which are ruining the timber resources nine to ten times as fast as they are being cut. Although millions of tons of pulpwood have been cut and shipped on Canadian railway lines, probably nine times as much has been destroyed by human-set fires.

The sportsman, the prospector, the settler and all other users of the woods have the power to maintain or destroy the future revenues of the railways from forest products. This does not take into consideration the menace of forest fires to tourist traffic for, after all, the tourist patronizes Canadian railways because of the lure of the woods and not to inspect our city streets or our factories.

LUMBER TRADE CONDITIONS

Lumber Prices Remain Firm at St. John

The condition of the lumber market in St. John is favorable although it has not shown any recent sign of strength. However, prices remain quite firm and show only a slight falling off in comparison with the figures published in the last edition.

Provincial random shows 2 x 3 selling from \$27 to \$29; 2 x 4 from \$27 to \$29; 2 x 6 and 2 x 7 for \$27 to \$29; 2 x 8 for \$35 to \$37; and 2 x 10 from \$38 to \$39.

Spruce covering boards five inches and up are going at \$28 to \$29, merchantable boards (spruce) clipped 10, 12, 14, 16, \$32 to \$35.

Scantling is being offered at \$27, \$28 and \$29, but the most popular seems to be \$28. The higher price is only obtainable for desirable lengths. Some lots have been disposed of at \$29.

2 x 8 is bringing \$35 and in a few instances is being disposed of for the higher figure. As regards 2 x 10 the sale is not large although some is being sold for \$39.00.

Laths are still holding on the local market for \$6.50 and \$7.00 although the sale is not strong at the present time. However, the opinion prevails that the market will strengthen during the remainder of the summer months. 1-5/8 inch laths are still holding at top price and from present indications will continue to do so.

The demand for shingles is good and white cedars are decidedly firm. There has been no change in the price of any type of shingles here for some time. The new cut is on and the depleted stock being replenished. Manufacturers here are confident that their supply will be taken care of.

On the whole the demand for all types of provincial random is said to be growing a little and the prices remain firm. As it is felt that the settlement of strike situations among builders and laborers' unions in the United States will mean an increase in building operations and necessarily the need for more lumber of all sizes and lengths.

Ottawa Market Picks up Considerably

An improvement in the tone of the Ottawa lumber market was noticeable during the opening period of June when orders became more plentiful and a brisker demand made itself felt. Prices in all grades remained firm and the outlook was encouraging, several firms reporting that they expected good business about September and, in the meantime, there would be a steady volume of trade.

The biggest improvement noted was in the domestic market, where stocks of practically all grades were in demand. Another encouraging feature was the undertaking of considerable new building late in May and early June. Merchantable red and white pine, spruce, and pine culls were principally in demand.

The condition of the Montreal wholesale market, Ottawa shippers said, could be better and they would be pleased to see it as active as the Toronto and the markets at other Ontario points. With the improvement in early June, manufacturers were inclined to believe that the slow business of the previous six weeks had been but a temporary lull.

The situation in regard to the American market did not show much general change, the demand from this quarter remaining about the same as it had been, which was slower than during the early part of the year. American yards, it was stated, had stocked up some time ago when warehousemen slashed prices and undersold. When these stocks have become exhausted, Ottawa shippers believe there will be a return of normal business and a considerably larger number of orders and inquiries. Another view expressed in regard to the U. S. situation was that American yards and builders were turning to southern pine and native grown woods.

Conditions with the South American trade continued irregular, there being only a few orders, which ranged from 50,000 to 300,000 feet for pine and spruce. Most of the pine orders called for Ottawa Valley pine, and the spruce orders for spruce from the Eastern Townships.

Shipping to the English and European market continued fairly active, the shipments being forwarded being those which had been ordered several months ago. Shippers to the English trade, stated that there were indications of the pine market taking a firmer tone in the near future.

Conditions with the sash and door, and the woodworking plants remained about the same. Labor for the sawmills was reported

plentiful. In some sawmills an advance of ten per cent. over last year's wages has been put into effect with the base wage being three dollars per day.

Several companies reported good progress being made with the drive, under favorable conditions. The supply of rivermen, it was asserted, was adequate and the level of the Ottawa river and its tributaries was such that few, if any of the bigger drives experienced any trouble through low water. Transportation conditions both by rail and water showed no change.

Montreal Reports More Activity in Some Lines

After a period of comparatively slow business, the Montreal market shows indications of greater activity. Following the break in the building programme in the United States, due to the abnormal demands of labor, buyers of lumber there stayed their hands. Now that conditions in the U. S. have been placed on a more stable basis, the orders are once more coming to hand and in some cases the lumber is required for immediate shipment.

While the general outlook is satisfactory, advices from some parts of the province do not speak optimistically of the position from the farmers' point of view. Crops are in a backward state and prices for cattle are by no means remunerative. The result is that the farmers have no surplus funds, and this condition is reflected in slow collections. This, of course, affects the lumber in common with other industries. At the same time there is a considerable amount of building proceeding in the towns and cities of the province.

The spruce lath market is easier, but the large mills are not inclined to make concessions.

Exports are on a fair scale, all the shipping firms sending moderate quantities. There is a great activity at Three Rivers, over twelve million feet being exported by one company during a month. The spruce lumber was loaded on four tramp vessels.

The revival in building in Montreal is illustrated by the figures for the first six months of the year. The permits for June were \$2,226,015, bringing the total for the half year to \$15,464,520, compared with \$9,142,774 in the corresponding period of 1922. With the exception of February and June, each month showed an increase. Some of the permits are for large amounts, several important structures being now under construction. The revival in building has undoubtedly been helped by the understanding as to wages arrived at between the employers and the men. There has not been any friction this year, and it is also stated that the men are more efficient than they were. There is in some directions a shortage of help.

In view of the possibility of a prohibition of the export of pulpwood it is interesting to note that for the two months of the fiscal year—April and May—the exports totalled 187,967 cords valued at \$1,713,125, as compared with 124,778 cords and \$1,216,631 in the corresponding period of 1922.

Quebec Export Firms are Busy Shipping

Quebec lumber export firms are busy shipping timber and sawn lumber these days to the United Kingdom. The export trade up to the first of July is said by the shippers to be 100 per cent. better than in 1922, and 150 per cent. in advance of 1921. Up to the end of June fourteen ocean steamship freighters were loaded with timber and deals at the port of Quebec, the principal shippers being the firms of W. & J. Sharples Limited, and John Burstall & Co. These firms expect to ship to the United Kingdom all the wood ordered by the British importers last winter, by the end of July, and then be free to get ready the restock for midsummer and fall shipments.

The biggest cargo shipped from the port of Quebec for some years past was taken by the SS "Romera," which sailed from Greenock on Wednesday June 27th, the "Romera" carrying 1,400,000 feet b.m., timber and deals, the firm of W. & J. Sharples Co., Limited, shipping 760,000 b.m. in timber and 40,000 b.m. in deals, and the firm of John Burstall & Co. 600,000 b.m. timber.

In the meantime the inquiries from the United Kingdom have slowed down, there being no demand from the middle to the end of June. This is explained by the reports received by the Quebec export firms from their United Kingdom agents who say that, while business in all departments of trade is steadily increasing and the timber trade this year is being conducted on more normal lines in

Lumber Trade Conditions

(Continued from page 53)

Great Britain since 1914 and that there has never been a year since that date when prices and consumption were so steady, still there is a nervous feeling in regard to the Ruhr settlement and a possible collapse of Germany before the end of September unless France and Belgium agree to meet the situation in a manner that will obligate the Germans to make a concrete proposal that will lead to a settlement.

Astute diplomats and students of politics as well as economists, who have their vision constantly focussed on the Ruhr and the German psychology, fear that unless something is worked out very soon, it will end in a German revolution with a termination, which the European watchers are unable to see, nevertheless realize will put an end to the possibility of a settlement of the reparations and the claims of the allies. It is, therefore, hoped that a change will shortly take place in the political situation, no matter how complex it may seem in the present, that will end the tension and ultimately influence a settlement that will allow Europe to set her political and economic house in order and stabilize the trade and exchange conditions of the world.

In the meantime from expert reports received, Great Britain is taking care not to embroil her political and economic interests. She has slowly but surely been creeping back to normal, and 1922 paved the way to confidence. This can be judged by the timber and lumber market generally, and, for the past year, England never had a better period since the outbreak of the war. With everything under present circumstances, although not altogether assuring, is thought by many, in a position to know, to be sufficiently stable to make it probable that no drastic change in values and business in general would take place except for the better.

Although house-building has been progressing steadily in the British Isles, especially in England and Scotland, there is still a dearth of houses in England. It is anticipated that there will be a boom in this direction before the end of the year. However, British trade and prosperity are not dependent upon the conditions of its own country. These are improving steadily with the aid of the increase in the export trade, though there is nothing very hopeful yet in the position of her neighbors on the continent, but, in other parts of the world where international animosity has subsided, progress in trade is now rapid and Great Britain is reaping the benefit.

The consensus of the expert opinions received by the Quebec trade is that, on the whole, there is a better feeling of confidence and optimism in England to-day in comparison to a year ago, with, however, one bad feature, the constant grumbling of labor, the high wages and the spread of Socialism to prevent British trade running in old grooves.

Conditions in Ontario are Seasonably Quiet

There is not much change in the general market situation, and business is moving only according to the necessities of consumers rather than stocking up for the future or engaging in any speculative buying. The retail trade is rather quiet and materials are not going out as fast as some expected. This has not caused replacements to any large extent. Most mill stocks are now in shipping condition and are being sent out from the yards to those consumers who are sorting up several lines. There is still a scarcity of certain sizes in dry lumber. A few retailers are resawing and resorting to substitutes rather than enter the market at the present time.

There are two or three reasons for this and one is that the backward spring and cold weather caused the usual amount of business to be deferred, and then most yardmen feel that it would be advisable to wait until a good harvest is assured and it is definitely known what the trend of autumn prices will be. The market in spruce lath is a little weaker but white pine lath are holding their own although there will not be any big call until a little later. Building operations are proceeding satisfactorily in all the different centres although June did not witness any increased activity. It is believed that lumber prices will hold their own from this out and that the recent slowing up in purchasing will have a stabilizing effect on fall trade.

Speaking of the situation generally, a close student of market conditions remarked recently, so far as Ontario production and distribution are concerned, that the stage was set for a fair business this fall and he believed that the lumbermen would share in the volume. The increase in production so far this season had been very small in spite of all reports relating to augmented output. Some mills up north had to close down recently for several days owing to the slow drives and unavailability of logs. Others started off a month behind this spring due to low water and the backward season, and would not cut as much as anticipated.

Fundamentally and basically, the industry is in a sounder position than it had been for years and is now approaching what might

be called a normal state of affairs. Those, who bought with speculative intent or with an enlarged vision of appreciation in values, made a mistake and now realize that their conception of conditions was widely astray.

A leading wholesaler said in a recent interview,—“One favorable feature in connection with the lumber line is that stocks generally in the hands of distributors are much lower than in previous years and this will tend to equalize matters during the fall. A steady market with firm prices can, in my opinion, be looked for throughout the coming months. Everything tends toward shaping up the year's operation as fairly satisfactory. While 1923 trade will not be productive of large profits or heavy returns, it should result in all expenses being met and all branches of the activity conducted without the considerable losses that many producers and distributors underwent in the liquidating and unloading processes of 1921 and the early part of 1922.”

As far as western material is concerned, there is a fair call for mixed carloads. There has been a slight change in the shingle situation with prices reverting slightly upwards and the demand growing more active. Many shingle mills in the West are closed down and this has tended to redeem a situation which was rather shaky for some time.

In the forest products arena, while the demand for lumber and building materials is less than it was some weeks ago and dealers seem to have satisfied their immediate requirements, there is no inclination toward pessimism. The decline in structural requisites is the usual accompaniment of midsummer quiet among retailers and contractors.

Regarding hardwoods, there is no material change and industrials are not in the market to any great extent. There was considerable buying earlier in the year but this has dropped off of late. Prices are well balanced with stocks and it is not probable that there will be any alterations for some weeks. Millmen are convinced that reducing quotations at this time would not attract trade, and are content to sit tight and wait until the time for fall requirements begins. In the meantime, wholesale and manufacturing hardwood firms are busy making shipments of orders previously placed.

In regard to lumber prices in general, the situation is well summed up by the general sales manager of a western yard who said:

“Because lumber is more costly than it once was there is a disposition to place the blame on those who make and deal in lumber. The average man does not realize that in his lifetime we are passing from an old to a new and utterly different age in respect to lumber. Nobody expects buffalo meat to be as cheap now as in the days of Buffalo Bill, when there were as many wild cattle on the western plains as there are now domestic cattle in the whole country. While the forests are not passing with the dramatic rapidity of the buffalo herds in their last years, they are going and have already disappeared to such an extent that people will inevitably find themselves in a different position with regard to this important material of their daily life, than ever before. Within two decades we have passed from a condition of superabundance of wood to one in which the available supply is no longer equal to the ordinary demand.”

No Pause in Growth of Canadian Building

One of the most encouraging features in Canadian building statistics for the first half of 1923 is the steady expansion which has occurred, month by month, in the value of work performed. Starting with the small total of \$9,840,800 in contracts awarded during January, the figures compiled by MacLean Building Reports, Limited, show a swiftly rising tide which culminates in the record for June, the latest month under review. The progress of the industry may be set forth as follows: January, \$9,840,000; February, \$13,311,800; March, \$19,954,800; April, \$30,843,800; May, \$40,697,200; June, \$50,674,800.

Analysing the above figures on the basis of locality it appears that Ontario leads conspicuously, accounting as it does for more than 49 per cent. of the \$165,323,200 half-yearly Dominion total as follows: Ontario, \$84,020,600; Quebec, \$53,032,600; British Columbia, \$10,582,600; Manitoba, \$5,842,500; Alberta, \$4,851,100; Saskatchewan, \$2,453,400; Nova Scotia, \$2,276,000; New Brunswick, \$1,925,900; Prince Edward Island, \$338,500.

Dissecting the Dominion half-yearly figures once more, this time from the viewpoint of the type of work undertaken, the forecasts made earlier in the year that 1923 would continue to be a year of exceedingly active home building, are fully borne out. There has also been a marked increase in industrial building as the following totals for six months reveal: Residential, \$50,293,200, or 30.4%; Business, \$47,426,400, or 28.7%; Industrial, \$20,044,100, or 12.2%; Public Works and Utilities, \$47,559,500 or 28.7%.

The price of building materials strengthened as spring advanced, but this seasonal movement seems to have abated. Last month prices

receded somewhat and have probably passed the peak for the present time. There is plenty of mortgage money available and also a fairly substantial supply of building funds. Labor costs remain practically unchanged. A continuance of good business throughout the remainder of 1923 seems very probable. Underlying conditions are sound and the outlook is promising.

During June construction contracts awarded in Canada amounted to \$50,674,800, compared with \$35,620,400 a year ago. Residential building contracts accounted for 24.5% of the June total, and amounted to \$12,191,400. Business building amounted to \$12,758,000, or 25.0%; industrial building, \$6,347,300, or 12.5%; public works and utilities, \$19,378,100, or 38.0%. The value of contemplated new work reported during May was \$55,936,300.

Building Activity Continues Steadily

The complete figures for the building and alteration permits issued by the city architect's department, Toronto, show that June this year fell slightly behind last year's value but the half year was larger than 1922. June this year showed a total of \$4,070,195; and June, 1922, \$4,392,980, a difference of \$322,785. For the half year 1922 had a value of \$17,893,725, and 1923, \$18,087,397, this year having an increase of \$193,672 for the first six months. The following figures show the classification of the various permits for June:

476 brick dwellings, value	\$2,100,000
34 brick and rough cast	83,000
16 frame buildings	32,000
2 small factories	69,000
1 apartment house	30,000
440 garages	170,000
1 separate school	69,000
Stores	830,000
Car barns (Roncesvalles)	275,000

Industry Now Getting in Normal State

Regarding conditions and market outlook on the Pacific Coast a representative Western Lumberman, in a recent interview, took an optimistic view and summarized matters as follows:

"There is a good deal of talk, at the present time, about the peak having been reached and the slump started, but I wish to assure you there is nothing that warrants giving this rumor any credence from our own point of view.

Local building in Vancouver, which is not a prosperous place and has not been for several years, is just as active as it can possibly be. I argue, if this is true in the city of Vancouver and it is possible to find money to do building, to the extent they are doing it in residential homes, in Vancouver, then it surely is possible for any other district to find the money for the same activity in building.

This view is sustained by the amount of dimension that is moving to the Atlantic Seaboard. They are taking it there in shiploads and, while it may be true that structural building and office buildings may be held back on account of the high price of steel and cement and laborers' wages, there is no reason in my mind for us to fear that the dwelling house building will let up at all and I think that the agricultural condition will gradually improve along with industrial activity. To put it in a nutshell, I feel that, for the first time in a great number of years, we are really beginning to get into a normal state. We find that labor seems to be in a more peaceable mood than it has been at any time for years past and I have every reason to feel that we are settling down to a good steady grind, as we used to before the upheaval of the World's War. Our situation is so far improved over anything that has gone in the past that there is no comparison. The ability we have for shipment by water to the Atlantic Seaboard has revolutionized our lumber situation on the Coast and made it possible for us to go to quantity production."

Ticket the Campers New Forest Rule

The Government of New Brunswick has issued a proclamation declaring that people entering the forests of that Province until next November must take out a license to do so. This action brings New Brunswick into line with the Province of Quebec in providing an official check on people who visit forest country for the purpose of "travelling, camping, fishing, picnicking, or other purposes." People who do so must first register with a local warden, game license vendor, or other official authorized to issue permits under the law.

This action is deemed necessary by the Government in order to prevent forest fire damage resulting from the carelessness or thoughtlessness on the part of those entering the forest on pleasure bent. The adoption of the registration regulation is not an attempt by the Government to keep people out of the woods or to deprive the fisherman, camper, or hunter of his annual vacation.

Pulpwood Embargo May Benefit Settlers

Quebec pulpwood dealers and brokers report very little change in the pulpwood situation. They make the statement that, owing to the plentiful supply of railway cars, the larger part of the wood that had been ordered for their supply for 1923, has been shipped, and expect that the whole will be delivered to the mills by the end of July. The prices are the same as in the month of April, \$20.50, delivered at the New York State mills. Up to the present, with the exception of a few inquiries, there has been very little demand or orders placed by American mills for next year's supply.

Quebec pulpwood dealers, who handle the freehold wood that farmers cut, are commencing to take a deeper and more serious interest. Hon. Mr. Fielding proposes to place an embargo on the export of all Canadian pulpwood. A percentage of these dealers view the embargo proposition with alarm, fearing that it will put them out of business, while the more important section of the dealers with a philosophical turn of mind, maintain that, with the enormous loss of forest resources by fire and the large amount of export to the United States, under these conditions have the Federal Government no other recourse. They contend however, that in the event of an embargo the Government must, and no doubt will, safeguard the small freeholders, by a clause in the legislation, placing a minimum price on the sales of pulpwood which will protect the freeholders from being at the mercy and their property interests exploited by the big Canadian paper and pulp mill concerns. If such a clause is inserted and embodied in the proposed law, they feel that they will be allowed to continue in the business with a fair measure of profit because they will be in a position to sell to the Canadian mills.

Notwithstanding their extensive limit holdings, Canadian mills, anxious to conserve and preserve their holdings for future consumption and having to go into the woods further and further annually for their supply, will naturally purchase the wood cut by the freeholders. They realize that American paper manufacturers are likely to move their mills over to the Canadian sources of wood supply. This would result in a demand from the freeholders for consignments, and, at the same time, develop the country districts in which the American mills would be located. Capital would be brought into Canada and would build new towns and branch railways which would, in the end, benefit Canada. With a stable price fixed by the Government for pulpwood in protection of the farmers and small freeholders, the embargo would, in all probability, turn out a blessing instead of a hardship on the Canadian farmers. It would also put a new and vigorous hope into colonization, arrest the depredation of speculators in the woods, provide for bona fide settlers and be a better protection against the menace of fire and the wholesale destruction of Canadian forests.

Bathurst Co. Wins from Compensation Board

One of the most important verdicts rendered by the New Brunswick Supreme Court, in many years, is that in favor of the Bathurst Company Limited, of Bathurst, N.B., against the New Brunswick Workmen's Compensation Board. The amount involved is \$62,000, two yearly levies, each of \$31,000. The board had levied on the company and the company which controls, a pulp mill, a new paper mill, three saw mills and large tracts of timber and pulp lands, refused to pay the levy. The board instituted court action against the company and the first verdict was in favor of the board. Another court tilt resulted in another verdict for the board.

The company then started action against the board and also appealed against the previous verdicts to the Supreme Court of the province. The result in view of the previous verdicts was somewhat unexpected, particularly by the board members.

The Bathurst Company fought the levies on the following grounds:-

(1) That the Workmen's Compensation Board of New Brunswick expended the bulk of the moneys received from levies in expenses of the board and staff rather than payment of claims for compensation.

(2) That the Workmen's Compensation Board of New Brunswick was extravagant.

(3) That the principle of the compensation system as adopted by the Workmen's Compensation Board of New Brunswick was unfair to employers generally as it placed the entire burden for the upkeep of the Workmen's Compensation Board on the employers, the employee contributing nothing.

(4) That the Bathurst Company, Ltd., is exempt from levies by the board because of a company system of compensation affecting all employees injured while at work for the Bathurst Company Limited.

The verdict in favor of the Bathurst Company Limited, is likely to be appealed by the Workmen's Compensation Board of New Brunswick. In fact, according to one report, the appeal will be carried to the Privy Council if necessary.

What Will be Effect at Port Arthur

In reference to the prohibition of the export of pulpwood from private lands which may go into effect owing to Hon. Mr. Fielding's bill having received its third reading at Ottawa, it is stated that the Port Arthur and Fort William district will be greatly affected by the measure.

Every year ships come to Port Arthur for capacity loads of pulpwood taken from the district forests, for shipment to United States mills. There are several large concerns with business offices in Port Arthur carrying on an exclusively export business in pulpwood.

The Thunder Bay district is one of the most valuable pulpwood areas in Canada and from it vast quantities are cut annually but not all of it is for export. The three local mills, the Provincial Paper Mills Co., the Thunder Bay Paper Co. and the Fort William Paper Co. consume many thousands of cords each year and as many more thousands are cut from the forests, driven down the rivers and rafted to Port Arthur where the wood is loaded into American ships for American paper companies.

Elsas Will Have New Kraft Mill

The Department of Lands and Forests of Ontario has awarded the right to cut pulpwood and timber on the area situated in the watershed of the Trout and Chapleau Rivers in the district of Sudbury, comprising an area of 1,049 square miles, to the Continental Wood Products Co., of Elsas, Ont.

The company, of which Philip T. Dodge, president of the International Paper Co., New York, Herman Elsas, president of the Continental Paper & Bag Co., New York, and others are directors, have their woods headquarters at Pine, Ont., and their rossing plant at Elsas. The head office of the organization is at 107 St. James St., Montreal.

The prices at which the timber is to be cut are as follows:- White pine, including dues, \$8.76 per M feet, b.m.; red pine \$8.60 per M feet, b.m.; jack pine, \$5.15 per M feet, b.m. if taken out in the log; spruce if taken out in the log, \$7.17 per M feet, b.m.; spruce pulpwood \$1.30 per cord; other classes of pulpwood 70 cents per cord. These rates on pulpwood are a bonus in addition to the dues of 80 cents per cord for spruce and 40 cents per cord for other pulp woods.

The Continental Wood Products Co. has deposited \$50,000 with the provincial authorities that they will carry out the agreement as provided by the terms and conditions of sale and erect a kraft pulp mill which will likely be located at Elsas. This mill will cost not less than a million and a half dollars. The daily output will be not less than 75 tons of kraft pulp, and, at least, 100 persons must be employed for ten months in each year. Construction must start within six months and before June next \$500,000 must be expended. The Ontario Government also reserves the right to require the erection of a kraft paper mill of not less than 50 tons capacity per day, and to operate continuously with minimum average daily output of 35 tons.

The area, which the sale involves includes several townships in which there is a considerable growth of tamarac, jack pine,

"Canned Goods"

You'll find our Monarch Brand infinitely superior because we pack only the highest quality kind, and our large turnover allows us to offer fresh stock at all times.

Peas, beans, corn, tomatoes, soups, etc.—
"canned, but with the flavor of the fresh variety about them."

Give them a trial—your men will appreciate it.

H. P. Eckardt & Co., Toronto

Bigger capacity, greater rigidity, less friction with this Flat Screen

Of all the pulp mill machines we build none does us more credit or is of greater money making capacity for its owner than our new improved Flat Screen. Not how we can cheapen it but "how can we improve it"—is our motto. It is 30% to 50% heavier than any other screen, yet actually takes less power to drive. Bearings are babbitted and scraped before assembly and all cams and cam shoes have ground and polished surfaces.

Cams are keyed and shrunk on shaft before being turned, ensuring absolute accuracy in the pulsations of the rubber diaphragm area and greater screening capacity than any other machine. End stands heavily flanged to prevent vibration. Vat and flow boxes can be designed to meet any requirements. Special machines built for high grade papers, bond stocks, etc. Let us send you full particulars—this is the flat screen you want.

Write us for interesting quotations on grinders (3 and 4 pocket), Chippers, Wet Screens, Digestors, Diffusers, Tanks, Penstock and Plate work, Brass Castings, Electric Welding.

Engineering & Machine Works of Canada, Limited

ST. CATHARINES, ONTARIO

*Powell Equipment Co., Limited, Agents at Winnipeg
T. M. Grindley Co., Agents at Vancouver*

poplar and other kinds of timber, which have not heretofore been entering largely into the Ontario pulpwood industry. This wood will now be used in the production of kraft pulp and the construction of the plant will solve the problem of the profitable disposal of many miles of timber area at present going to waste. On a certain number of the townships awarded spruce cutting rights have been excluded to make way for a newsprint industry later on.

In addition to the 1,049 square miles of territory which have just been secured by the Continental Wood Products Co., this organization has also freehold lease of several thousands of acres in the vicinity of Elsas which is located on the Canadian National Railways. The wood which will be consumed in the new pulp mill will be floated down the Chapleau and Trout rivers to the Canadian National Railway.

The Continental Wood Products Co. were the only bidders for the limits and the prices obtained are regarded as very fair when all circumstances are taken into consideration.

Quebec Pulpwood Dealers Enter Protest

A delegation composed of a number of Quebec pulpwood dealers recently waited on Hon. Ernest Lapointe, Minister of Marine and Fisheries, to register a protest against the Government's action in passing the bill calling for an embargo on pulpwood. The delegation laid stress on the fact that if the embargo were enforced it would mean the ruin of their business and would act to the detriment of other businesses as well. Mr. Lapointe said that he would be glad to present their demands to the Government at Ottawa, but he asked them to prepare the protest in writing. A petition was therefore drawn up and this will be signed by the pulpwood merchants and other parties concerned.

Firms are Adding More Barking Drums

The Canadian Barking Drum Co., Limited, of Toronto, of which B. Branch is manager, report business as being very active at the present time. Recently an order was received from the Laurentide Co., Grand Mere, Que., for two 10 x 47-foot drums, while the Matagami Pulp & Paper Co., Smooth Rock Falls, Ont., have also placed an order for two 10 x 30-foot drums. These will be added by the firm to the present installation of two drums, making four in all. Recent orders from the United States include one, 10 x 30-foot drum for the Tomahawk Kraft Paper Co., Tomahawk, Wis., and one, 10 x 20-foot drum for the West Virginia Pulp & Paper Co., Piedmont, W. Va.

What the Proposed Embargo May Do

The Government Bill empowering the Governor-General in Council to prohibit the export of pulpwood has been carried. Discussing it from the point of one interested in the production of newsprint, an official of one of the largest companies in the Province of Quebec expressed doubts as to whether it would be possible to carry out effectively such prohibition. He stated his belief that the purpose would be more efficiently served by a law putting a tax of say \$5 a cord on the wood exported. This would, of course, restrict the export to a certain extent but it would raise a substantial revenue on what was sold. While some American mills would be unable to pay such a tax, in other instances the profits were sufficient to still leave a margin. His objection to the prohibition was mainly based on the view that it would force many American newsprint mills to locate on this side. He admitted that this looked like an unusual objection, as such mills would give more employment here. On the other hand it must not be overlooked that Canada was already well supplied with mills, and that new ones would immensely increase the production of newsprint, with the result that the newsprint industry would be subjected to greater competition. So that while there would be more labour employed, and our pulpwood resources consumed at a far greater rate, there was, on the other side, the almost certainty that the newsprint companies would be under the burden of ruinous competition, with a general disturbance of that industry.

An export tax was not subject to such an objection. It would not invite reprisals, for the reason that the States were practically bound to come here for a substantial part of their newsprint supply. It would also give the farmers a wider market than under a prohibition law, and would enable them to obtain better prices.

Bay Sulphite Co. Will Cut Much Wood

The Bay Sulphite Co., of Chandler, Que., state that their sawmill is leased this year and the lessees are cutting all cedar logs into shingles. The Bay Sulphite Co. are turning all their wood into sulphite pulp. They plan to cut 93,000 cords of wood this season

which will be required to keep their pulp plant in operation for the next twelve months. T. A. V. Tremblay, F. E., is the manager of the woods department of the company, whose operations are carried on in Gaspé County.

So far as wages of men in the camps are concerned axemen in the Gaspé district are getting from \$50 to \$55 a month which is an advance of about 18 per cent. over last year. Oats have gone up slightly in price and the probabilities are that hay will be selling in Chandler around \$25 to \$30 a ton.

New Pulpwood Company Incorporated

The Atlantic Pulpwood Co., Limited, was recently incorporated under the Companies' Act of the province of New Brunswick, for the purpose of carrying on business in pulpwood and timber lines. The company represents a combination of the business formerly carried on by W. Roy Smith and Grey B. N. Keith, both of whom have been engaged in the pulpwood business in Nova Scotia and New Brunswick respectively for several years. The company proposes to handle cargo as well as rail shipment wood, and has its head office in St. John and a branch office at Annapolis Royal. The authorized capitalization of the new company is \$49,000.

Establishes World Record for Construction

Angus McLean, president and general manager of the Bathurst Co., Limited, Bathurst, N.B., and John Ball, manager of the pulp and paper department of the same company, recently paid a visit to New York. While in that city at their office, 41 East 42nd St., they were interviewed by L. D. Post, proprietor of the "Paper Mill," New York, who publishes the following under the pen name of "Derb," which will be read with much interest:

"You gentlemen look pretty happy, and I would like to know why."

Mr. McLean looked at Mr. Ball, winked and said, "You tell him, John."

Mr. Ball looked at Mr. McLean, and he looked at me, kept right on smiling and said:

"Well, Derb, we sort of think that we have established a world's record for mill construction."

"Good," I replied. "What are the facts?"

"Exactly six months and two weeks after we broke ground, we had our new ground pulp mill completed and in actual operation on a commercial basis."

"That sure sounds like a record," I replied. "How big is the mill?"

"We are making eighty tons of ground wood in twenty-four hours."

"That sounds like a pretty nice mill," I said. "How many grinders have you?"

"We have four magazine grinders, built by the Waterous Engine Works, five wet machines, six thickeners and six rotary screens. All of this equipment was built for us by the Waterous people."

"Well, what about the news print mill?"

"We expect to have our news print mill running by July 15."

"How many machines?" I asked.

"Why, we are installing one now and there will be another later on."

"How big is the machine and what make?"

"The machine is 160 inches wide, made by Walmsley and will run at a speed of about eight hundred feet a minute making sixty tons of news print paper per day."

"And you say new buildings were erected for this ground wood and news print mill?"

"Yes, sir, all of skeleton steel and hydro stone concrete brick which we made right on the job. The machine room is ninety feet by three hundred feet, the finishing room is ninety feet by two hundred and fifty feet and the ground wood mill two hundred feet by one hundred and twenty feet, two stories high."

"How is your water power?"

"We have ten thousand horse power developed and which is mighty important; we have five thousand square miles of timberland all within easy reach of our mill."

"That mill is located on tide water, isn't it?"

"Yes, sir, the boats can come right up to our door and bring the paper over an all-water route to either New York or Chicago."

"What else are you doing in Bathurst?"

"We are increasing the capacity of our sulphate pulp mill from fifty to seventy-five tons daily."

"Who supervised the construction of the new mill in this record breaking time?"

"I did, and Hardy S. Ferguson was the consulting engineer."

"How long have you been with Bathurst, Mr. Ball?"

"About a year and a half."

J. C. D. Martin, Limitee, Montreal, is a new concern recently incorporated to operate in the preparation of timber and lumber. Capital \$49,000.

Hanley-Clarke Lumber Co., Limited, Montreal, is a new company recently formed to deal in lumber, shingles and pulpwood. Capital \$49,000.

Martin B. Reed, of Boston, Mass., president of the Atlantic Lumber Co., spent a few days in Toronto recently with J. W. Jacobson, Ontario representative of the firm.

Monks & Co., Quebec, P.Q., have been granted a charter to carry on in all its branches a lumber, timber, pulp, and pulpwood business. The capital stock is \$25,000.

W. W. Allen & Son, Middleton, N. S., are contemplating the erection of a sawmill. The new unit will have attached to it seven dry rooms and will be of concrete block construction. The dimensions are 45 x 85 feet.

J. P. Dupuis, of J. P. Dupuis, Limited, and president of the Montreal district of the Province of Quebec Retail Lumber Dealers' Association, has just returned from a visit to the Gaspé Peninsula and Bathurst, N. B.

The National Pulp Corporation, Limited, Hamilton, Ont., was recently incorporated to manufacture and deal in pulpwood. Capital \$800,000. Judson Culp and O. A. McPherson, both of Hamilton, are two of the incorporators.

W. Norman Fox, sec.-treas. of Edward Clark & Sons, Limited, and Mrs. Fox have returned from an extended motor trip through the Adirondack Mountains, Lake Champlain district, the Maine Coast and other scenic routes throughout the New England States.

Kent Ockley, Limited, of Toronto, who are wholesalers of hardwood flooring, doors, sash, interior trim, etc., have opened an office at 46 Main st. West, Hamilton, Ont., which is in charge of Nelson Roycroft. The company have already developed quite a large business in the Ambitious City.

A charter has been granted the F. Villeneuve Lumber Co., Limited, of Walkerville, Ont. The authorized capital stock is \$40,000. F. Villeneuve who is at the head of the newly incorporated company has been in the lumber business for many years and associated with him are L. J. Walter and T. J. Villeneuve.

From the financial standpoint airplane control of British Columbia forests has been a failure and will be undertaken this summer only on a small scale, if at all, officials of the forestry department declare. Only one machine is available now and this will be used in cases of emergency only.

The Canadian Pulp and Paper Association will co-operate with the Federal Government in exhibiting productions of the pulp and paper industry at the British Empire Exposition to be held in London next year. The companies are to be invited to send samples which will be suitable for the export trade.

Lightning caused a forest fire which destroyed 1,500 acres of timber lands on the Southwest Miramichi River, near Napadoggan, N. B., a divisional point on the transcontinental division of the Canadian National railways, according to reports reaching the department of lands and mines.

A charter has been granted to D. Kemp Edwards, Limited, to carry on the business of lumber, saw and planing millers and manufacturers of woodenware, etc., with headquarters in Ottawa and a capital stock of \$150,000. David Kemp Edwards is at the head of the new organization.

The tug "Reliance" of the Spanish River Pulp & Paper Co., Sault Ste. Marie, which foundered in Lake Superior last December off the coast of Lizard Island, has been refloated and brought back to the Soo where repairs will be made and the "Reliance" again put in service.

A. Mortimer Clark, son of Alfred Clark, of Toronto, president of Edward Clark & Sons, Toronto, has joined the inspecting staff of the firm and is now on duty at Mont Laurier, Que. His entrance into the lumber ranks marks the third generation of the family identified with the hardwood industry.

H. U. Grierson, of the Comrie-Grierson Lumber Co., Scarboro Junction, Ont., says business has been very good this season in the Toronto suburb. The Kingston Road vicinity around Scarboro is the scene of considerable building activity at present. The Comrie-Grierson Lumber Co. are a new concern who have been operating at

Scarboro Junction only a few months. They are becoming acquainted very rapidly with the needs of the trade and are well satisfied with their location. They carry a complete line of wood building materials and are located on the main line of the G.T.R.

Charles O. Maus, of South Bend, Ind., spent a few days recently in Toronto calling upon the members of the trade, and reports that the outlook for fall business is good. Mr. Maus is opening up branch offices in Winnipeg and Montreal. Walter McBean of Toronto, is his representative in Ontario.

The special reforestation committee of Grey County Council, at the June session, recently reported in favor of entering into a reforestation scheme for the county, but the Council, after considerable discussion, filed the report for future reference. The scheme would embrace 1,000 acres to cost \$10,000 and alternative suggestions were the purchase of 190 acres and then 90 acres, but these were dropped.

The Abitibi Power & Paper Co. are rebuilding their wood room at Iroquois Falls and making an up-to-date installation at a large expense. At the present time they have four Canadian barking drums located outside the wood room. These will be removed to the wood room, together with the four new drums which were recently furnished by the Canadian Barking Drum Co., Toronto.

The Star Lumber Co., Limited, with a capital stock of \$20,000 and head office at St. Joseph de Beauce, Que., has been granted a provincial charter to carry on a general lumber and timber business. Among the incorporators are E. Farrell, of St. Joseph, O. Sylvain, Ste. Rose, and Edward J. Farrell, of St. Fabien de Panet, district of Beauce.

The boiler house of the Dymont-Baker Lumber Co., Limited, London, Ont., became ignited recently. For a short time the flames spread to the adjoining buildings. Prompt work on the part of the firemen saved the property of the company from complete destruction. The damage, which was principally to the boiler house, is estimated at \$5,000. The fire had not impeded in any way the work of the plant.

The value of the aeroplane in fighting forest fires is emphasized in the report of the air board covering the year 1922, tabled in the House of Commons, Ottawa, recently. "Thousands of square miles of timber have been saved by the use of the aeroplane," states the report. "During the season, seventy-six fires were spotted by commercial aircraft and put out."

A recent despatch from Iron Mountain, Mich., says that the Ford Motor Co. has contracted with Fielding Bros., of the Canadian Sault Ste. Marie, Ont., for 50 million feet of logs, mostly hardwood to be shipped to the Ford Sawmill at L'Anse, work on the contract will start at once and it will take five years to complete it. The logs will be cut near Goulais Bay, Ont., and the first shipment will be despatched in November.

The saw mill owned by William Selkirk, of Warsaw, 14 miles from Peterboro, Ont., was burned to the ground recently after being struck by lightning. The building had been built only 15 years and contained at the time of the fire several hundred dollars worth of carpenters' tools. A new engine and a canoe were also destroyed. Some of the lumber near the building was saved, but a large quantity was lost. No insurance was carried on the building or contents.

J. B. Pearce passed away recently in Norwood, Ont., aged 82 years. He was the first reeve of that village and for many years occupied a seat in the County Council. The late Mr. Pearce was a former president of the Pearce Co., of Marmora, who are well known in the lumber arena and for a long time past had been postmaster of Norwood. He was one of the moving spirits in the construction of the Trent Canal, and was prominently identified with the Good Roads Movement.

Lumbering operations are to be carried on during the summer months in several parts of New Brunswick, although it has been the custom to cut the logs and haul them during the winter months. During last spring the heavy snow in the southern portion of the province made it necessary to curtail the cut, and several operators found themselves without sufficient logs to keep their mills running during the summer. In order to supply their wants in this direction, several firms will have logging crews in the woods for the summer.

The Worthington Pump & Machinery Co., which is one of the largest concerns of its kind in the United States is considering the establishment of a subsidiary concern in order to take care of the Canadian market. The new organization will be known as the Worthington Pump Co. of Canada, and negotiations are progressing between the city of Toronto and the company which are likely to be completed before the end of the year. It is understood that the plans include the absorption of the present Canadian agency, the Storey Pump & Equipment Co. and effecting arrangements with another machinery company in Toronto for the manufacture for the Canadian trade of Worthington products especially pumps and mining machinery.

More Timber Berths are Sold

The Department of Lands and Forests recently announced that Messrs. Grant & Dunn of Latchford, Ont., are the successful bidders for certain timber berths lately put up for sale. They secure a tract of forest in the township of Barr, south and west of the Montreal River, 11 1/3 miles in area, paying for the timber which consists entirely of red and white pine, \$15.53 per 1,000 feet. They also secure a tract in the township of Kitson in the Timagimi Forest Reserve, 4 1/2 square miles in extent, paying the following prices: Red and white pine, \$13.53; jack pine \$10.75; spruce \$12.25; poplar and basswood, \$8; other timber, \$7.25; ties, 25 cents; spruce pulp, \$1.60; other pulp 80 cents; cedar posts, less than 20 feet, 23 cents; less than 30 feet, 50 cents; less than 40 feet 80 cents; less than 50 feet, \$1.25; over 50 feet, \$1.75. Crown dues in all cases are included.

Closes the Bush to All Parties

The Abitibi Transportation & Navigation Co. Limited Iroquois Falls, Ont., have issued an order that no pleasure parties are allowed on the right of way or other property of the company. This will shut out hunters, fishermen, picnic, camping parties and others. The action was taken owing to the danger from forest fires at the present time and the dry weather early in the season.

The Abitibi Company have quantities of prepared pulpwood in the bush which they are naturally bound to protect from fire risk by taking every precautionary method possible. No employee of the company can travel over the railway without a permit and then only with formal permission and despatched instructions from headquarters.

Will Canada Get Too Many Mills?

The views of men connected with the Canadian pulp and paper industry on the prohibition of the export of pulpwood are to a large extent influenced by considerations which have little or no bearing on the merits of the subject. These considerations have relation to the affiliation with American pulp and paper companies. While American capital is largely invested in the Canadian industry, the main interest of those investors is on the other side of the border. Such men desire that American mills should continue to have free access to Canada's raw materials; they have been forced to build plants on this side of the line and are opposed to any further pressure which might result in other mills being transferred to Canada.

The other side to the controversy is that the Dominion is losing every year enormous sums by allowing its wood to be exported as raw material. Canada is the logical country for the production of pulp and paper and there is no reason why it should supply the essential portion of the product to be manufactured into the furnished article, thus losing millions of dollars which would otherwise be spent in employing Canadian labor.

At the same time there are those who fear that the construction of additional mills in this country will mean increased competition in newsprint, because of the larger production, and that the industry will be demoralized by reason of over development. There are already signs that in the near future Canada will be manufacturing more than the market can absorb and it is argued that, if American companies are compelled to come here, there is certain to be a drop in price.

The Federal Government has promised to safeguard the interests of the farmers and settlers by allowing them to export the wood

*Model Dry Kiln located in the Research Laboratory of the
B. F. Sturtevant Co.*

Economies in Mill Operation

The Sturtevant Dry Kiln introduces several important economies into mill operation, because it speeds drying without degrade, reduces freight bills and quickens turnover.

The uniform temperature and steady flow of air throughout the Sturtevant Kiln eliminates excess moisture and ensures **thorough** drying of every piece of lumber.

MONTREAL — GALT — TORONTO

Edgings

A. J. Morris, lumberman, has opened an office at 304 Manning Chambers, Toronto.

L. J. Linton, of the Linton Lumber Co., Toronto, accompanied by his wife and family, is spending a holiday among the Thousand Islands.

J. Taylor and Son, timber merchants of Preston, England, were in Toronto recently and also visited several sawmills in the Sudbury district.

Tunk Bros., Limited, Bothwell, Ont., were recently incorporated to operate sawmills and to manufacture all kinds of lumber and wood products. Capital \$25,000.

Ray B. Maxson, of the Thurn-Maxson Lumber Co., South Bend, Ind., who are specialists in hardwood, spent a few days in Toronto recently calling upon his friends in the trade.

Dyment-Baker Lumber Co., 309 Bathurst St., London, Ont., have started work on repairs to their boiler shavings bins and mill interior which were damaged by fire recently.

The Sheppard & Gill Lumber Co., of Toronto, have acquired additional property on the south side of Wrenson Road, which was recently purchased from H. M. Cudmore.

G. Mason, head of the firm of G. Mason & Co., Midland, Ont., arrived recently from Manchester, England, on a visit to the Canadian plant of which W. H. Nelson is general-manager.

S. Anglin Co., Limited, Kingston, Ont., was recently granted a provincial charter to take over the business of S. Anglin & Co., and to deal in all kinds of building supplies. Capital \$225,000.

D. Rogers' sawmill at Cloverdale, B. C., was recently rebuilt and is now busy operating, turning out principally ties and dimension stock. A spur track was recently put into the mill from the Great Northern Railway.

May Island Land & Lumber Co., Sherbrooke, P.Q., was recently organized to manufacture and deal in lumber, timber and pulpwood. Capital \$100,000. Ernest Sylvestre and C. Picard, both of Sherbrooke, are two of the incorporators.

H. W. Guettler, of Chicago, Ill., president of the Canadian Barking Drum Co., accompanied by his wife and son, sailed recently for Europe. Mr. Guettler will visit a number of the pulp and paper mills in Great Britain, France, Sweden and other countries.

Westminster Mill Co., Limited, of New Westminster, B. C., recently purchased seven shingle machines. Three of these are motor driven and are at the new Brunette mills, and the other four are at Lulu Island plant where replacements are being made.

Hon. E. A. Smith, of Shediac, N. B., is now busy sawing lumber for the export trade, and says that he finds the English market more stable at the present time than the United States. Mr. Smith is a former Minister of Lands and Mines for the province of New Brunswick.

McGibbon, Limited, of Sarnia, Ont., report that business is very good at the present time and that considerable building is going on in that section. The steamer "Nico" recently discharged a large cargo of hemlock at the McGibbon dock and several other shipments are expected a little later in the season.

The demand for dressed lumber has been unprecedented owing to the large number of new houses that are being built in Chatham. The houses that are being built this year are of a semi-bungalow type and are a much better class than that of former years, the designs for 1923 being particularly attractive.

British Columbia is threatened with early depletion of its yellow pine forests. There is probably 35 years' supply of yellow pine of all grades and only 10 to 15 years' supply of merchantable timber of the quality being cut at the present time. These facts are revealed in a report just made public by the forest of lands.

W. B. W. Armstrong, formerly secretary to the B. C. Loggers' Association, and recently a log broker of Vancouver, has been chosen as secretary of the B. C. Manufacturers' Association, his appointment having been made lately. Mr. Armstrong, who succeeds James A. G. Hart in office, has assumed his new duties.

A fire tank car has just been put into commission on the Abitibi Railway between Cochrane and Hughes. The idea is to provide protection for the road, especially the trestles and bridge. The car has two tanks on it and with a capacity of 3,500 gals. each, or 7,000 gals. in all. It is equipped with a pump driven by a 4-1/2 H.P. Fairbanks-Morse gasoline engine and carries about 2,000 feet of hose.

The pump is used both to fill the tanks and to discharge them. The pump will draw 25 to 50 gals. per minute against 85 lb. pressure. The tank car is hitched on just behind the engine, so that it is available anytime on short notice.

A. S. Boyer, who for the past nine years has been with the William Shirton Lumber Co., Dunnville, Ont., has formed a partnership with E. Honsberger. They are launching a retail lumber business in Waterloo and have been busy erecting sheds, office, etc.

At the annual meeting of the Board of Trade of Sault Ste. Marie, Ont., which was held recently Mr. Lyons, president of that organization, predicted for the Soo in the near future the greatest industrial activity that it has ever known. Mr. Lyons urged, among other things, that the export of hardwoods should be prohibited.

All the lumber mills of the Campbellton, N.B., district closed down recently while the crews of men were fighting forest fires along the New Brunswick and Quebec border. The last of the Campbellton mills to shut down was the Shives Lumber Co. who sent 200 men to fight a menacing blaze across the interprovincial boundary in Quebec for which assistance had been asked.

One hundred and four thousand Canadian school boys have been banded into an army of guards to watch for and prevent forest fires in the Dominion this year, according to an announcement made by the Canadian Forestry Association. The new organization, which is known as the Young Canadians' Forest League will, it is expected save several million dollars' worth of timber from fire ravages.

The boom in timber in British Columbia continues to gain in momentum, according to government returns of the industry for the month of May. During that period the Government revenue from timber licenses, hand loggers' fees, sales, scale and royalty, amounted to \$245,431. For May 1922 the total was \$249,909 and for May 1921 the figure was \$108,011.

Fire destroyed a saw mill and considerable quantity of lumber belonging to D. C. McLean at East Lake Ainslie, N.S. The blaze originated from a spark from the engine, and alighting on material covered with waste oil, quickly ignited. Although a number of men employed in the mill attempted to extinguish the fire, it spread so rapidly that nothing could be done to salvage anything within the building. There was no insurance on the property.

An annual grant of \$5,000 for three successive years for the purpose of conducting investigation and experimental re-seeding of burned and cut-over timber lands in New Brunswick has been made available by the Advisory Council of Scientific Research of Canada. Representative areas of not less than ten acres each will be selected in different climatic conditions on which the experimental work will be conducted.

E. C. Parsons, who for the past three years has been on the sales staff of the Toronto office of the Canadian Western Lumber Co., Limited, has become associated with R. G. Chesbro, wholesale lumberman, of Toronto, and will look after Western Ontario, specializing in B.C. forest products. J. A. Stewart, who for a considerable time has been attached to the Fraser Mills office of the Canadian Western Lumber Co., has arrived in Toronto and will be identified with L. D. Barclay, Eastern sales manager of the company.

A big increase in production for the first five months of this year has been the most notable feature in the lumber business stated, Sylvester Hadley of the C. & J. Hadley Lumber Company, of Chatham, Ont., in discussing the present industrial situation. This increase in business has also materially increased the payroll, thus providing more work for the men of Chatham. In discussing the trend of industrial affairs as affecting the local industry Mr. Hadley stated that more cars of lumber were unloaded from January 1st to May 1st of this year than for the whole of last year.

James W. Sewall of Old Town, Maine and Washington, D.C., whose business of timber cruising, mapping, and local appraisal usually reflects the condition of the lumber and pulpwood trade, reports the highest activity in his work since 1917. From his northern office Mr. Sewall has crews at work, not only in Maine, but in Vermont, Ontario, Quebec and Nova Scotia. His organization has looked over about a million and a half acres so far this year, and new work is coming in every week, with no present signs of any let up. Mr. Sewall feels that this augurs well for at least the immediate future.

Kenny S. White was recently appointed sales manager of the sash, door, hardwood flooring and trim department of the Boake Mfg. Co., Toronto. He is a thoroughly partical man who has had an extended experience in the lumber line. For a score of years he was with the Gilmour Co., Trenton, and later with Mr. Boake for three years, after which he was Canadian representative for the Paine Lumber Co. of Oshkosh, Wis., selling their doors in all parts of the Dominion. Mr. White was for some time with the Seaman, Kent Co. and is well known in the trade.

POWER!

The "Caterpillar"* Logger has no equal for power, sure traction, rugged endurance, and low cost of operation. Its design and construction are the result of Holt's long experience and exact knowledge of all the different conditions and requirements encountered in hauling logs and pulpwood over snow and ice roads, and all other conditions in Northern lumbering.

The "Caterpillar's" record for actual accomplishment is of vital interest to every Northern lumber and pulpwood manufacturer. On the operations of The Abitibi Power & Paper Company, The Mount Murray Woodlands Corporation, The Anglo-Newfoundland Development Company, The Great Northern Paper Company, and many others, the "Caterpillar" Logger has proved its ability to continuously haul heavier loads and at lower cost than can be hauled by any other machine or method.

The Anglo-Newfoundland Development Company, Grand Falls, Newfoundland, say—

"Your Mr. Davis is about to return after being with us during the winter months in charge of our 2 "Caterpillar" Tractors, and I am unable to let him go without a few lines thanking you for sending a type of man such as Mr. Davis.

"No doubt he has reported to you the very successful tractor operations just finished in which we hauled 11,000 cords with our 2 "Caterpillars", and with only a ¾ hour holdup for any trouble from December 19, 1922, to April 14, 1923. Our tractors averaged 15 hours per day, and we only lost 1 day, Sundays included, because of bad weather.

"On one trip over a snow and plowed road, the "Caterpillar" Logger hauled 9 sets of sleds containing 57 cords and 1 cord horns. The "Caterpillar" pulled the load over 4 miles without any help, took all the curves, and tracked very well, time 2.15 hours, and kept back all loads going down grade. Total weight 130 tons including sleds."

The latest "Caterpillar" Logger contains new features of strength and operating convenience, making it farther in the lead than ever before. Our unequalled service facilities are at the instant command of every Canadian owner. Investigate the "Caterpillar" Logger now and plan for your 1923-1924 operations.

Record Newsprint Output at Iroquois Falls

The big newsprint mill of the Abitibi Pulp & Paper Co., at Iroquois Falls turned out during the last month 12,270 tons of newsprint which is an average of over 471 tons per day. This average is over 8 tons higher than the former record during the summer of 1922. The blue ribbon week at Iroquois Falls was for the seven-day period ending June 30th when an average of 477.60 tons of paper were turned out, or three tons higher than the best previous record.

Look This Over and Think

My prime reason for travelling in Western Ontario for the last twenty years has been to try and sell lumber intelligently. In that time it is only natural that I should have noticed how my buyers in turn, handle the product I have sold them.

Maybe I have wasted a lot of time thinking about other peoples' troubles, but somehow the difficulties of my retail friends seem very near to me. When I sell a man a car of material nothing pleases me better than to listen to him relate how pleased his customers were with the quality of the lumber.

Sometimes, however, when calling upon a firm, I open the office door and find a different atmosphere entirely. Often an argument is in full swing and the language floating around makes even an old campaigner like myself actually blush. I have an instance in mind that happened about three weeks ago on my territory. All unsuspecting and tender-hearted I opened the office door of a customer and the unharmonious hullabaloo that issued forth told me that my mission would be postponed for a while. However, having ventured that far I stepped in and this is what I saw and couldn't help but hear.

Leaning over the counter was a big, red faced contractor whom I recognized as a chronic kicker. With his right hand he was pounding the counter and saying in a loud voice: "How in h— do you think we're going to build houses if you people keep raising prices. And another thing, I can get this siding around town cheaper than that." The last remark was accompanied with a pound on the statement which was lying on the counter.

By this time I could see with half an eye that my customer was about as angry as a cat with glue on its hind feet. According to the law of averages the situation called for an old time free-for-all, with the possibility of a couple of perfectly good straw hats torn to pieces. Situations like this one was not new to me, and they generally ended as I have suggested—with the bitterest of feeling. But this argument took an unexpected turn. Until this point, the contractor had been doing most of the talking, and in a very loud voice. When the breathing space arrived the merchant moved up to the counter.

"Look here, Mr. Ashby," he said politely, "I can give you cheaper material than that, but you would only bring it back and kick up just as much fuss as you are now. The trouble is, you go around to some of these fellows who will sell you anything, irrespective of whether you'll be satisfied with it or not, and then you come back here and practically call me a thief. The truth is I'm a friend to you and your interests by giving you the best material for your needs at a fair figure. I have noticed that you give these price cutters considerable business when the issue is seemingly unimportant, but you come to me for real service on the particular jobs. You know as well as I do that these fellows can't fill your all 'round needs the way they do business, and yet you'll pass me up to save a few pennies and cause all this ill feeling. I'm never prejudiced to a thrifty business man, but I hate to be used," he added with feeling.

"To my mind the builder who picks out a reliable firm and does business steadily with it, making friends and building confidence on both sides, is much farther ahead than the man who jumps here and there at the shortsighted inducement of a few cents," concluded the merchant.

Some comeback, eh? Now I've heard many replies to such arguments as this contractor put forth, but never before have I heard such an intelligent one as this. Whether friend contractor was convinced, there is not the slightest doubt in my mind, although I have not heard yet. He paid the bill right there and bid the retailer good day in a short, but exceedingly polite manner under the circumstances.

When he had left I shook hands with my friend, the retailer, who had been a customer of mine for years.

"Mr. Dalton," I said, "that's the first time I ever heard an argument over prices in your office."

"Well, it is a rule with me to have these little tiffs in private, but this fellow got ahead of me this time and I had to preach my sermon right here," he replied. "I'm glad you heard it though, because I've been trying to dope out something like that for him for a long time, and if I'm not mistaken he'll be a better man to do business with now."

"I haven't a doubt in the world that's what will happen, Mr. Dalton, because you've convinced me too," I agreed.

He looked puzzled.

"I've convinced you too?" he queried in an uncertain voice.

"Sure, this is the first place I visit after hitting town. You see I can't help dealing with you, Mr. Dalton," I laughed. "How about that car of shingles you said you'd be needing about this time?"

"Well I'll be darned," he said good humoredly. "I guess it works both ways."

"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Waterous Engine Works Co. Brantford, Canada

A Waterous advertisement in "Canada Lumberman" in 1881

When "CANADA LUMBERMAN" started its career of service to the industry, in October 1881, it contained an advertisement for the Waterous Engine Works, Brantford, a firm which had even then been for many years supplying engines and sawmill machinery to lumber operators.

It is a matter of pride to "CANADA LUMBERMAN" that in every issue since 1881 this paper has carried an advertisement for Waterous equipment. This, we believe, pretty nearly constitutes a record in Canadian advertising.

In the years intervening, changes have taken place in saw-mill practice, and also in industrial publishing. The Waterous Engine Works and the "CANADA LUMBERMAN" have both kept pace with this progress, and the letter which follows is, perhaps, all that need be said as to the character of the relationship of this paper with its oldest continuous advertiser:-

Let Steam do Your Setting

The hardest worked employee in the ordinary Saw Mill is the setter. The handling of large logs calls for great muscular effort on his part, while his work on the smaller logs is almost equally laborious, as he has to put through a much larger number of them.

Every cut makes necessary a new adjustment of the log, which, in the absence of our Steam Set Works, is accomplished by a long throw of the hand lever. Before the end of his day's labor, the setter is usually exhausted. In many mills, the setter, because of the fatiguing nature of his duties, is not required to work for as many hours per day as the other employees.

All this is changed by our Steam Set Works, making the labor of the setter so much less arduous that he can do a full day's work. He is also enabled to set logs more quickly, thus increasing the number of cuts that can be made in a given time and the lumber produced is materially improved in quality and regularity. Instead of the Sawyer being kept waiting for the setter—the usual condition in ordinary saw mills—the reverse is true, and the setter is usually waiting for the Sawyer.

It goes without saying that the main purpose of a saw mill is to produce as much good lumber as possible, at a minimum cost. As the cutting capacity of the mill depends mainly on the speed with which the logs are handled, the importance of an appliance which will shorten the time required to move logs into position for the next cut, is apparent.

The considerable saving of time effected by the use of these Set Works, together with the greater exactness in the thickness of the lumber thus obtained, accounts for the rapid adoption of this machine by mill men.

WHY NOT WRITE FOR

The Canada Lumberman,
347 Adelaide St. West,
Toronto

Gentlemen:-

"It occurred to us that as we have been advertising in the Canada Lumberman since the first issue, a letter of appreciation from us might not come amiss.

"The fact that we have been in your paper steadily since the first issue is, we think, the best recommendation we can give to a paper. We would like to say, however, that we very much appreciate the service you have given us since we have been with you, and the way you have handled our wishes with respect to advertising."

Yours truly,

The Waterous Engine Works,
Service Department.
Chas. L. Waterous

To old and new advertisers alike, we give service as nearly 100% perfect as we can possibly make it. "CANADA LUMBERMAN" is the only national publication serving the interests of Canada's second greatest industry.

Relieve the Box Shook Shortage

By the use of

Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and other dimension stock, LATH, HANDLE MATERIAL, Etc.

These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 40" Long

All cut any required thickness from $\frac{1}{4}$ " to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf $\frac{1}{8}$ ". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00 per M ft.
SAWING & OVERHEAD	2.00 " "
NET COST	10.00 " "

(Continued on page 124)

THERE were 1021 forest fires reported in Ontario last season. The vigilance of the fire rangers kept 53 per cent. of these down to a size not exceeding five acres. But yet the total area burned was over 346,000 acres—equal to a strip of forest one mile wide from Toronto to Cochrane.

Of the total number, only 52 were lightning fires. In other words, out of every 100 fires, 59 were due to man's carelessness and were preventable.

Accordingly, the problem of forest protection in Ontario calls for the co-operation of the whole citizenship of the Province. If reasonable care be exercised by everyone in the woods to prevent the start of fire, our forests will be safe. Railway officials, campers, prospectors, lumber firms, settlers, construction firms—all can help by being careful of fire in the woods, and by joining hands with the press, the leaders of public opinion, and the business men of Ontario, in prompting educational propaganda to reduce forest fires.

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "M.D. Elk"

A RELIABLE AND FINE PERFORMING MOULDER

The exceedingly wonderful prestige of this moulder is evidenced best by investigating mills throughout the world and seeing the hundreds and hundreds of machines bearing the Yates 108 name-plate.

Surely there is something in Yates 108 which accounts for this remarkably high standing. To follow a 108 during construction is a revelation. Examine any big feature or any small detail. Even the coiled springs on the chipbreaker are special-made; they allow each section of the chipbreaker to yield, yet afford an even bearing across the bed plate upon stock of irregular thickness.

Comparison of Yates No. 108 with any other moulder will demonstrate its superiority. More than likely you will install the 108 when in the market for this kind of equipment.

ATKINS

STERLING QUALITY SAWS

**Cut ?
You said it!**

You can find low costs in Atkins Saws and Machine Knives. It's in their long service. For efficient cutting in all kinds of timber they have no equal.

It's Atkin's formula for the steel that makes them do the excellent work for which they are famous. This together with the acme of perfection of temper and workmanship have made them known as

"The Finest on Earth"

Leading saw and knife makers of the world. Specialists in the manufacture of Atkins—Coleman Feed Rollers.

MADE IN CANADA

"A Wonderful Piece of Engineering Skill"

said a mill owner the other day, referring to his Band Resaw—a product of the E. Long shops. And this is typical of the opinion held by owners of this machine in mills all over Canada. It is an opinion born of years of satisfactory service. For in point of service "Longs" record has never been surpassed.

If you are in need of a resaw that will turn out large quantities of well-manufactured stock—get full particulars of this machine today.

TRANSMISSION MACHINERY FOR THE SAWMILL

When you are overhauling your mill you will find quite a lot of parts—boxes, shafts, gears and pulleys—that need replacing. We can supply anything you will need in this line.

We supply pulleys in any size up to 12' in diameter, sheave wheels too. Steel shafting up to 25' long as large as 12" diameter, rough or finished, keyseated as desired. Also solid and clutch couplings, and set collars of every kind.

Our boxes and bearings, shaft hangers and mule-stands are furnished in standard styles and standard sizes.

If you require gears we build them in steel, iron and wood, cast or machined. Our patterns cover gears and blanks of most sizes called for and we can furnish what you want on short notice. Paper and iron frictions are accessories which we turn out right. Let us re-new yours.

Make out your repair list this week and we will give you right prices and quick delivery on it. Our workmanship is guaranteed.

The LINN LOGGING TRACTOR

THE illustration above pictures one of the trains, hauled by a Linn Logging Tractor, for the T. S. Woollings Company, Limited, on the way to the dump. The Woollings Company moved five such trains per day—with one Linn Logging Tractor—their haul was seven miles in length, and they had a continuous upgrade ranging from five to seven and one half per cent, and they moved over eight thousand cords, with one Linn Logging Tractor, in Fifty-five days—and they not only did all their plowing but they portaged all their supplies for their fall and winter (1923-24) operations as well—and, not crediting the portaging, their haulage of their wood was 51½ cents per cord, and this included not only their depreciation and all fixed and operating costs, but it also included road preparation and maintenance and loading and unloading costs.

We are not specifying this individual operation for reference, we have so many operators, and we will gladly furnish the names of one or all of them, for reference to the wonderful power and performance of the Linn Logging Tractor.

The Linn Logging Tractor last winter hauled 90% of the wood that was moved mechanically in Canada—it not only did that, but it moved its wood and saw logs at a lower cost than any other method employed.

On the main haul. Seventy-four cords on the way to the dump

This is the eighth of a series of photographs taken in Ontario and Quebec last winter, where Linn Logging Tractors were in operation—the ninth will appear in the August First issue of this magazine.

Prescott's Valve Controller

Patented June 8, 1915

The Machine You Have Been Waiting for.

To eliminate every trouble with your Steam Feed Valves install one of these machines.

Six Real Reasons for Doing So:

- 1—Gives the sawyer the easiest kind of control of valve.
- 2—Hand lever stays put, making them safe against any jerk or kick of valve.
- 3—Gives the sawyer every confidence in handling valve.
- 4—Will prevent accidents—is easier on the nerves and carriage runs steadier.
- 5—Water flowing into valves from foaming boilers does not fret the sawyer.
- 6—This relief from all troubles of which sawyers have complained enables them to give closer attention to the logs they are cutting and a better inspection of the lumber they produce.

Read what one of the largest lumber companies on the north shore has to say about it.

We are sole Canadian manufacturers of these machines.

Pamphlets with full description and prices on application.

Let us quote you also on our new "Hamilton" Vertical Steam Feed Valves.

WHAT IS IT ?

PRESCOTT'S VALVE CONTROLLER

Waubushene, Ont., Sept. 11, 1917.
Messrs. Wm. Hamilton Co.,
Peterborough, Ont.

Gentlemen:—

Replying to your inquiry re Prescott Valve Controller, which you sent us last spring to try out: I beg to say that we installed this machine early in April, just previous to starting the mills, selecting the most difficult valve we have to handle, the steam having to travel through nearly three hundred lineal feet of pipe to reach this valve, and noting the fact that the pipes are well covered, there is necessarily considerable condensation, and every sawyer knows the annoyance caused by water passing through the valves, which violently jars or jerks the lever, sometimes wrenching it from the hand and thereby inflicting serious damage to the machinery of the mill. And now after nearly five months of daily use, I am pleased to tell you that this device has put up all that is claimed for it. There is not the slightest jar or vibration to be felt, no matter where the lever is held. It is very easily attached and does not interfere in any way with the free movement of the lever, and the Sawyer, Mr. George Botting, also our Foreman, Mr. W. A. Gill, both speak of your controller in the most glowing terms. I can, therefore, congratulate you on securing an article that will fill many a long felt want.

Yours truly,

(Signed) D. B. Anderson,
Chief Engineer.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

STACK LUMBER CO.
ESCANABA MICHIGAN

BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Why not Birch Flooring?

Certain characteristics of this Canadian hardwood make it preferable to Oak or Maple

A fact which is rapidly becoming recognized by both dealer and consumer is that Birch is really a better flooring than Maple.

Certainly the colors are much more uniform. But this isn't the only reason. Birch resists rot much better than Maple, where dampness is present. And not only does Birch take a better finish, and stain more easily, but the natural wood shows a superior grain, (many people re-

gard Selected Red Birch as being a prettier floor than quarter cut oak.) Yet Birch is little more than half the price of Oak.

Do not these facts suggest to you a new field of sales possibilities—particularly among those people to whom the cost of Oak is prohibitive?

Get in touch with us now for full details concerning our

Saves Power

You know how often there are occasions when all shafting may not be required.

With the Dodge Friction Clutch you can shut down inoperative parts of your plant without interference with other units. You may not only close down individual machines, you can, if necessary, dispense with a whole floor or section without affecting operations elsewhere.

Prevents Accidents

This closing down of units saves power, and Power Costs Money.

A Dodge Friction Clutch about earns its cost in one year in the power it saves.

The other advantage is prevention of accidents. The timely throwing out of a clutch lever may often prevent a catastrophe.

Specify Dodge Split Friction Clutches on your next order.

Windsor Lumber Firm Introduces New Features

Where Beauty and Utility Combined to Give the Attractive Setting Surrounding the Busy Office of the Windsor Lumber Company

J. C. Scofield, President of the
Windsor Lumber Co.

When one approaches the attractive, well-kept office of J. C. Scofield, president of the Windsor Lumber Co. Limited, Windsor, Ont., and former president of the Ontario Retail Lumber Dealers' Association, he is uncertain while walking up the path, whether he is entering a beautiful flower garden or a model lumber yard. Around the front of the building roses in various colors are blooming and there are decorative plants which add to the inviting character of the surroundings. Mr. Scofield is an enthusiastic floriculturist as well as an aggressive lumberman and believes that beauty and utility can be combined with splendid effect and decided advantage to a retail lumberman. There is a touch of the artistic to the premises of the organization. This

is seen as one strolls through the well laid-out and admirably-arranged yard. Neatness and order are in evidence everywhere as well as the latest facilities for unloading stock, routing, delivery, etc.

There has just been added to the company's planing mill and factory a brick addition 30 x 35 feet, which is used for bench work and relieves the other departments of the plant. The foundations for the lumber piles are in splendid repair and admit of free ventilation, and as rapidly as possible tile draining is being extended throughout all portions of the premises which cover nearly seven acres. By the use of gravity rollers the greater portion of the lum-

ber shipped in is transferred direct from the car to the sheds or piles, thus reducing handling expenses to a minimum.

Another improvement recently effected is in regard to fire protection. There is no litter left around the factory floors and a small, frame fire station was erected recently in the yard, a short distance from the mill. Of the Swiss style of architecture and nicely painted, it contains a hose reel with 500 feet of regulation, standard size hose, couplings, etc. The hose is attached to a hydrant and the reel can be run out at a moment's notice. Chief C. J. DeFields, head of the Windsor Fire Department, when called up by Mr. Scofield and told about the completion of the new fire station, was asked to give it a number. He shouted back,—"Well, this is Friday the 13th. We will call your station 13!" In connection with the Windsor Lumber Co. Mr. DeFields has organized a local fire brigade with a chief, deputy chief, reel men, hydrant men, hose men, etc. Drills are held periodically and efficiency is the watchword in reducing fire hazards to the minimum.

It will be remembered that Chief DeFields delivered an interesting and instructive address before the members of the Ontario Retail Lumber Dealers' Association on the occasion of their annual convention held in Windsor in January last. He spoke on fire protection and his helpful remarks will be recalled by all who had the pleasure of hearing him.

One more improvement which the Windsor Lumber Co. has carried out, is the installation of a drinking fountain in the yard. Formerly when the men outside wanted to quench their thirst, they had to make a rather long trip to the mill. If engaged in loading or piling possibly the absence of one employee would entail others remaining idle until his return to the job. The drinking fountain is centrally convenient and now only a few seconds are lost in "wetting up" whereas many minutes were previously consumed.

The Windsor Lumber Co. believe in advertising and have taken part in Made-in-Windsor Exhibitions, Hardwood Flooring Weeks,

sor, Ontario

Canada Should Not Allow Outsiders to Exploit Her Raw Materials

Editor, of the Canada Lumberman:

Sir—During the recent debate in Parliament over the proposal to stop the exportation of pulpwood, one of the honourable members, speaking in opposition, said that he viewed with alarm the loss of the American market for the pulpwood cut by the settlers. apparently, however, he saw

No cause for alarm in the fact that these same settlers, by carelessness in burning their refuse, are destroying millions of dollars' worth of raw materials which might otherwise be utilized to agriculture itself, to say nothing of the losses they are inflicting on themselves and their fellow-settlers in the destruction of their homes and other property.

No cause for alarm in the fact that Canada, by allowing foreigners to exploit its raw pulpwood, is supplying fifty or more foreign pulp and paper mills, in competition with our own, with cheap raw material and that Canadian workers are being thereby forced to follow the raw material out of the country in order to find employment in its conversion.

No cause for alarm in the fact that we have already this year sustained the greatest forest fire losses in Canada's history, with the possibility of having the whole of the northern forest area of Ontario, Quebec, and New Brunswick completely devastated before the year is over.

No cause for alarm in the fact that immense damage was sustained by our power and storage dams in the spring, due solely to the same cause, nor in the fact that many of our large industrial plants are forced to close down or to run on part time only for four or five months in the year owing to lack of water.

No cause for alarm in the fact that our agricultural industry itself is menaced by the condition that is fast approaching and that threatens to turn our crop-growing lands into vast deserts.

Heavy Fire Losses Through Carelessness

The bona fide settler is undoubtedly entitled to every reasonable consideration, yet it is to be considered that Canada's losses during the first few weeks from forest fires, many of which originated in the carelessness of settlers, approximated \$100,000,000 without taking into account the enormous potential value of the young growth destroyed, while on the other hand, the total annual receipts for land sold to settlers in the province of Quebec, where the losses are greatest, only amounts to about \$100,000, against which the province spends in the neighborhood of \$2,000,000 in assisting the settlers and in building roads and bridges for their accommodation.

How much better it would be to confine these settlers to land already cleared, of which there is great abundance, where their opportunities for starting fires would be negligible and where they will find not only an immediate market for their produce but nearby opportunities for employment, such as that afforded by the pulp industries, in their off seasons.

It is to be noted that former Premier Drury in the recent Ontario election made use of this cry of protect the settler's right to sell his wood where and how he please and spoke against the embargo. The results show that the argument was not taken seriously and, indeed, I have received many letters from Ontario saying that it contributed to the defeat of Mr. Drury and his government.

Another honorable member of the House voiced fear of American retaliation if Canada took steps to protect its rapidly dwindling supply of pulpwood. This can only cause humiliation to a people who have behind them the history and the prestige of the greatest world-power ever known, the British Empire. In addition to that, it is pure bunkum. When have the politicians of the United States waited for a cause for "retaliation" when it was to their interest to put the screws on Canada and to bar out practically everything which we could export to that country except such things as they are obliged to have, including raw materials and pulp and paper? We have a remedy for this, if we would use it, in building up an inter-Empire trade.

Embargo on Coal is Bogey

The anthracite coal bogey was also brought out in the discussion, our alleged dependence on the United States and the possibility of reprisals in the shape of cutting off our coal supply being held up before us. So long as the American coal producers have coal to export—when not at the mercy of mine and railroad strikes—they

are only too glad to supply the Canadian market. It is only a short time ago that G. H. Cushing, one of their largest coal operators, publicly stated in Montreal that the American Coal Producers valued highly the Canadian Market and were prepared to fight for it, if necessary. If the Alberta mines he said, reduced their price 25 cents a ton, the Americans would cut theirs 50 cents, and if the Welsh mines, which have recently found a market in Canada, reduced their price one dollar the Americans would cut theirs two dollars. This does not look as though the Americans would deprive themselves of the Canadian coal market just out of spite, but it does prove that when our parliamentarians talk of a coal embargo they are using political bunk.

The pseudo plea for the settler is off the same piece of bunkum. An embargo on pulpwood will not injure the settler; it will greatly benefit him. The value of his wood will not deteriorate and in a short time the market he now has in the States will be transferred to this country. No one, by the way seems to be concerned about the mechanic, the tradesmen and the laborer, all of whom suffer injury when raw materials which ought to be worked up in this country, are allowed to be shipped away. Surely their interests which are numerically much greater, are entitled to at least as much consideration as the settlers'.

No one seems to have given consideration to the interests of the railroads, or the fact that the added increased revenues from additional freight that would follow the development of the pulp industry. if this raw material now exported were worked up at home, would be sufficient to wipe out the present deficit of the Canadian National Railways. A carload of pulpwood shipped out of the country means a carload of freight and nothing more. A carload of pulpwood converted into paper in Canada means four car-loads of freight going into and coming out of the mill.

Pulpwood Famine Fast Developing

Still another honorable member undertook to compare pulpwood with wheat and other farm crops and to say that interference with the exportation of one was no more justified than with the other. He overlooked the fact that we have a surplus of farm crops but are fast developing a famine in pulpwood. He failed to mention that a farm crop can be reproduced every year, while it takes from fifty to a hundred years to reproduce a crop of pulpwood. There is no analogy between the two. It was also suggested by an honorable member that pulp and paper interests might be using the writer to further their selfish ends. In reply to this, I will say that I will pay ten thousand dollars in cash to any one who can show where one single dollar, paid or promised, has been contributed to the forest conservation campaign carried on by me, other than the \$100,000 or more which I have expended out of my own pocket, or can show that there is or has been associated with me in the work any individual or interest who had any profit to gain by the work I have carried on. In so far as being interested on behalf of any pulp or paper industry is concerned, I would add that if I had my way not another live growing tree would be cut in Canada for twenty-five years for any purpose whatever. I have advocated this policy in many of my articles on this subject. I know this is not possible to bring about and that the cutting of trees will continue while there is a tree left standing. The next best method to adopt is to see that what trees are cut shall be manufactured in Canada so that Canadians may at least reap the full benefit of their own devastation.

The fact must also be borne in mind that with increased investments in pulp and paper mills we should have far greater forest protection than we do where only pulpwood operators, who have no interest other than to get the wood shipped out of the country at the smallest possible cost and who, leaving nothing but a lot of slash and inflammable debris behind them, are the chief beneficiaries of our present forest policy.

Load of Taxation Will be Lighter

A further argument in support of the embargo which the Government has undertaken to impose, is that the largest investments in new mills in Canada which will follow its enforcement will augment considerably the federal and local revenues derived from income and other taxes and thereby assist in lightening the load of the Canadian tax-payer, which everybody agrees, is altogether too burdensome.

No one will be injured by the embargo, not even the pulpwood

dealer. Just as much wood will be sold and used, as long as the supply lasts. The only difference will be that it will be sold to be manufactured in our own country instead of going to enrich another. It only takes eight months to erect a pulp mill and a six months' period allowed before the Act takes effect there will be ample time for readjustment. A six months latitude will allow for the shipment of all wood now on hand and it takes another six months operation to prepare a new cut.

In conclusion, let me point out that an embargo on pulpwood is only the first step towards the proper conservation of our forests and the regulation of their utilization. I predict that we shall have to go much further and that within two years the authorities will find it necessary to prescribe both the number and the size of the trees that any holder may be allowed to cut from his holdings, whether private or public. In this connection, I would point out the serious mistake that is being made in allowing half rates on stumpage for fire-killed timber. This creates a temptation for some of the smaller operators to allow fire to run through areas which they intend working, which some of them find it impossible to withstand.

With the comparatively small amount of live growth now remaining, cutting should be confined wholly to dead timber just so long as

the same is fit for use, and there should be no reduction in the stumpage rates on that account. We have already too many temptations and incentives for forest fires.

Some selfishly or political actuated people have said, in opposing the embargo, that we must not interfere with private rights ignoring the fact that, at worst, less than two per cent of our people would have their rights affected in any way, while those of the remaining 98 per cent would be immeasurably benefited by the new legislation. It is not possible for any country to adopt laws that do not in some measure infringe on private rights and on personal liberty. Hunters and the fur industry are very drastically controlled in Canada, so are fishermen and the fishing industry. In Heaven's name, then, why hesitate to control the most important and vital resource we have and without which there would be no fishing, no hunting, very little agriculture and not much of anything else.

This is not a question of free trade, reciprocity or protection, as some of our politicians would try to make it, but is simply one of national self-preservation. Under present methods we are rapidly heading towards national suicide.

Yours, etc.,
Frank J. D. Barnjum.

Significance of Proposed Pulpwood Embargo

The pulpwood situation at Quebec which has been attended with satisfactory results since the month of May during which period the Quebec shippers have done a fair business in the export trade with the American mills, has again received a check up by a shortage of cars, presumably caused by the railroads getting together their rolling stock for assembly in the west to move the grain production of the prairie provinces east for export shipment. On the whole the Quebec pulpwood dealers have done a good export business to the United States mills from May last to the beginning of June, and were in hopes that they would have shipped all orders in fulfilment of their contracts by the end of July if the railroad transportation service had continued. It would appear that it is only of late that the American paper mill operators have come to understand the significance of the proposed Canadian Government embargo on the export of pulpwood out of Canada, and are now getting busy placing orders for wood to be shipped to their mills before the embargo is applied.

In the meantime, the newspaper interests of the United States, backed by the smaller American paper mills and manufacturers of newsprint, are through the U. S. government putting up a fight to arrest, if possible, the placing of the embargo. The fear on the part of the mill operators is that they will either be compelled to move their mills over to Canada or go out of business. The newspaper interests take the viewpoint that an embargo by the Canadian government will augment the price of newsprint which they contend is already abnormal and, if further increased in price, will force many small publications and job offices in the United States out of business. The cry has gone forth through the columns of the American press that the imposition of an embargo on Canadian pulpwood export will mean the dealing of a decisive blow to American newsprint industries and that many mills, now almost entirely dependent upon Canada for their pulpwood, will be forced to close down.

The gravity of the situation to the United States newsprint industry is emphasized by the fact that since 1912 production in the United States has been practically constant while Canada has increased her output three times and that exports from this country to the United States were 83 per cent.

The Canadian Government takes the position backed by 90 per cent. of the Canadian people that the exploitation of Canada's forests has assumed a serious aspect, and must be protected, and if their Canadian wood assets are to be developed by American capital for American utilization, Canadian labor should be, at least, employed.

But there are other and more serious questions to be considered when the embargo is discussed by the United States newsprint interests as well as the Canadian pulpwood exporters to American mills. It is pointed out by the Natural Resources Branch of the Department of the Interior on reports based on comprehensive surveys published in regard to the forests of Nova Scotia and British Columbia and an inventory in course of completion by the Forestry Branch of the same department of the Ontario forests, likewise by examination of the considerable areas of forest lands in the Prairie Provinces and the forest services in the province of Quebec and New Brunswick of which data is being collected, information of which, however, is still far from being complete.

Based on these surveys, a tentative estimate of the remaining timber supplies of the Dominion has been given as follows:—

Eastern provinces 310,000 million feet b.m., softwood; hard-

wood, 90,000 million feet, b.m., total 400,000 million feet, b.m.

Prairie Provinces 140,000 million feet, b.m., softwood; 85,000 million feet b.m. hardwood; total 225,000 million feet, b.m.

British Columbia, 360,000 million feet, b.m., softwood, and 1,800,000 ft. b.m., hardwood; total 361,800,000 million feet, b.m., or a grand total of 810,000 million feet, b.m., softwood; 176,000 million feet b.m. hardwood, in all a total of 986,000 million feet, b.m.

The foregoing estimate includes all classes of timber, saw material, pulpwood, ties, poles, fuel, etc., whether accessible or inaccessible, and it is estimated that of this about 560,000,000 feet b.m. is of saw timber size.

The species used for the manufacture of pulp is estimated to be 800,000,000 cords of spruce, balsam, fir and western hemlock, and 980,000,000 cords of jack pine, lodge-pole pine, eastern hemlock, poplar and cottonwood, a total of 1,300,000 cords. About 600,000,000 cords of this is in Western Canada. Included in the pulpwood estimate is 500,000,000 cords which is also saw material which will, doubtless, be used to a considerable extent as lumber.

Is the Pulp Wood Accessible

These figures are undoubtedly impressive and likely to lead people to believe that there was little need for Canada to worry about the problem of diminishing or inadequate wood supplies. But the Natural Resources Branch of the Department of the Interior, points out that the question of accessibility is the most important factor for consideration in connection with Canadian forest resources. The material fact, however, is that under present conditions whether more than one-half of the saw material and one-third of the pulpwood, exclusive of the Prairie Provinces, can be considered commercially accessible. Then again, the average amount cut without reforestation must be considered. The average amount cut is, approximately, as follows:—

Lumber 4,000,000,000 feet b.m.; pulpwood (4,000,000 cords) 2,000,000,000 feet b.m., fuel (8,000,000 cords) 4,000,000,000 feet b.m.

Shingles, ties, poles, etc., estimated at 1,000,000,000 feet b.m., a total of 11,000,000,000 feet b.m.

It will be thus seen by comparison of the above figures that Canada has not a timber supply for an indefinite period and any conclusion to the contrary is unwarranted. It may be that the estimates will be reduced when more authentic information is secured, and that a large proportion of the timber can probably never be operated at a profit, and that, under the present system of exploitation, a great deal of wood is wasted, not to speak of the devastation by fire, insects and fungi, destroying many times the amount of timber used.

An increase in unemployment was reported recently at the Provincial Employment Bureau, Quebec, due to the return of a number of lumberjacks. However, according to officials of the Bureau, the prospects are good. A large percentage of the lumberjacks who have returned to Quebec will proceed again to the lumber centres for the driving season. Heavy construction will also start again by the middle of April and the expectations are that the season will be a good one. The Superintendent of the Employment Bureau said he expected that at least 2,000 men from the city and district would find employment for several years in the Lake St. John district, through the construction of the Grande Decharge and the Kenogami dams.

Advocates Embargo on Hardwood Logs

Hon. James Lyons, Sault Ste Marie

Hon. James Lyons, of Sault Ste. Marie, Ont., who is at the head of the Lyons Fuel & Supply Co., Limited, is the new Minister of Lands and Forests in the Ontario Government, succeeding Hon. Beniah Bowman. He has always taken a deep interest in the welfare and prosperity of the Soo and has a wide acquaintance with the northern country, its requirements, development, opportunities and potentialities. Hon. Mr. Lyons was born in Virginia in 1878 and has resided in the Soo for the past twenty-three years. He has been engaged in various lines of business for the last fifteen years and started the fuel and supply business, of which he was the head, in 1912. The firm have been in the lumber and timber line during these years on a small scale and enjoyed a splendid reputation for service and value.

Mr. Lyons is a public-spirited resident of the Soo and served two years as Alderman and three as Mayor. He has long devoted considerable thought and attention to forest resources of the north, having retired recently from the presidency of the Board of Trade. He says that in the district of Algoma, there are 200 townships surrounding the Soo and these townships are estimated to contain six billion feet of the choicest hardwood. Mr. Lyons strongly advocates the prohibition of the export of hardwood from Ontario, and, in a recent interview with the "Canada Lumberman," said:—

"We have not been manufacturing hardwood in the north to any great extent in fact, it has been considered that the bulk of our hardwood was only fit for fuel purposes, but some of the largest American manufacturers who have been using this hardwood, advise that the birch is the best on the North American continent for veneer, furniture, etc. The result is, they have been securing large tracts of hardwood in the last year or two, and at the present time in the District of Algoma, there is one contract in existence, which calls for fifty million feet of hardwood logs, to be followed by another fifty million feet upon its completion. There is another instance where they have contracted to take out 10 million feet of logs per year for a number of years.

"They are taking out the logs in preference to establishing mills here. This gives employment to thousands of men in the United States that should be getting employment in Ontario, and is depreciating the resources of the Province without getting anything in return, as all that is left on the land when they are through is the brush, and in many cases we are paying fire rangers to safeguard the standing timber left on other limits from the danger caused from the burning of this brush.

"We believe that if the export of hardwood logs was prohibited, now that the American supply is practically depleted, that the North Country and the Province in general, would receive largely the same benefit as was received when the export was placed on pine and pulpwood, and many American manufacturers, who are anxious to take our hardwood out of the country in logs would locate in the Province."

Want Pit Props as Return Cargo

Acting Trade Commissioner, Douglas S. Cole, of Bristol, England, in a letter to the Department of Trade and Commerce, Ottawa, on the coal situation and the demand for pit props, says:—

The difficulties of shipping Canadian pit props into the highly competitive South Wales mining area are well known. An investigation was made by the British Board of Trade shortly after the outbreak of the war, when it was concluded that Canada could not profitably compete with the pitwood supplied to the United Kingdom from Scandinavia and the Bay of Biscay, one reason being that much of this wood which is suitable for pit purposes has a definite value in Canada owing to its pulpwood qualities. Again in 1922, when the same question arose after considerable correspondence with the Canadian Lumbermen's Association and many Canadian shippers, it was found that Canada could not compete with Newfoundland owing to price, nor with southwestern France, Spanish, Portuguese, and Baltic competition owing to high ocean freight rates.

With Welsh colliery and ship owners, exporting to Canada an opportunity for reciprocal trade now presents itself under more fav-

orable conditions than those that have heretofore prevailed. The organization above referred to, who are shipping to Canada and the United States, are desirous of obtaining Canadian pit props and pitwood as return cargo, and are prepared to receive quotations f.o.b. Montreal and Quebec on pit props of good straight larch or fir, cut in sizes of 6½-9-11 and 13-foot lengths, with the diameter at the small end ranging from about three inches in the smaller props to about 7 inches in the longest. If Canadian wood is to compete, the price must not exceed about \$6.50 per ton free on board and stowed at either of these ports. Quotations from interested Canadian exporters if forwarded to the Bristol office will be submitted to the Welsh trade.

Northern Firm Will Have Big Cut

Knight Bros. Co., Limited, of Burk's Falls, Ont., are operating their sawmill to full capacity at the present time. The firm state that they have the largest stock of logs they have ever cut, and are having more lumber sawn at small mills on tributary streams than in any previous season. Their stock will this season run heavier to hardwood and lighter to hemlock and spruce.

Knight Bros. Co. say they have found sales for the first half of 1923 very fair indeed, with inquiries holding good for hardwoods and falling off for hemlock during the last month. Prices have been very satisfactory. The supply of labor has been about equal to the demand with wages about 10 per cent. higher than in 1922.

Australian Imports of Canadian Lumber

C. Hartlett, of the office of D. H. Ross, Canadian Trade Commissioner, Melbourne, Australia, sends an interesting review of trade conditions in that country during 1921-22. Referring to the imports of Canadian timber he says:

The importation of timber into Australia in 1921-22 amounted to 22,900,609 feet of dressed timber and 168,976,596 feet of undressed timber, or 191,877,205 feet, combined. In undressed timber, Canada is credited with 17,579,302 superficial feet, which is greater by over 5,000,000 feet than such imports from the Dominion in any previous year. New Zealand supplied 47,234,577 feet, and the United States 94,129,093 feet of undressed timber, but the imports from both countries were considerably less than in the previous year. In dressed timber Norway and Sweden supplied almost the whole of the importations, which were less than half the quantity imported in the previous year.

In 1914-15 the importations of timber were valued at £2,153,469, and declined to £1,722,035 in 1915-16, to £1,490,025 in 1916-17, and to £1,412,119 in 1917-18. The value substantially increased to £1,850,544 in 1918-19, to £2,478,315 in 1919-20, and to the highest amount yet recorded, £4,920,292 in 1920-21. In the year under review (1921-22), the value fell to £2,473,705 or less than for any year since 1918-19. While the imports of timber from Canada in 1921-22 were considerably larger in quantity than in the previous year, owing to lower prices ruling the value was £82,408 less.

The trend of the importations from Canada and the United States is shown thus:—

	1919-20	1920-21	1921-22
	£	£	£
United States	1,129,510	2,196,341	1,071,784
Canada	111,602	285,138	202,730

The Australian importations of timber during the last two fiscal years, for which particulars are available, are shown thus:—

	1920-21	1921-22
	£	£
United Kingdom	16,365	5,046
Canada	285,138	203,730
India	62,094	471
New Zealand	879,981	662,597
Straits Settlements	5,936	1,944
China	476	889
France	7,878	5,266
Japan	210,141	86,686
Norway	811,828	256,382
Sweden	383,105	130,804
United States	2,196,341	1,071,784
East Indies	46,486	33,006
Pacific Islands	13,230	9,121
Other foreign countries	1,293	6,979
	£4,920,292	£2,437,705

This miscellaneous classification includes wooden split pulleys, window screens and frames, wash boards, staves, etc., wholly or partly finished. The imports from Canada were valued at approximately £44,748 to which can be added ply-woods and veneers to the value of £1,735.

New Hardwood Flooring Firm Off to Good Start

Montreal Hardwood Lumber Flooring, Limited, of Montreal, was formed a few months ago for the purpose of manufacturing hardwood flooring. Operations were commenced at the beginning of March in a plant at 410 Parthenais Street, Montreal. The sales have been so satisfactory that it is proposed to extend the plant this year by constructing new offices and a warehouse capable of storing about a million feet of flooring.

The building consists of two stories, the ground floor being utilized as the mill and the next floor as the grading and storage room. The mill has a capacity of from 350,000 to 400,000 ft. per month.

Birch flooring, principally 3/8 in., 5/8 in. and 7/8 in., is chiefly manufactured, although flooring of the same thicknesses in maple, beech and oak is also made and carried in stock. The dry kilns, of

An interior view of Montreal Hardwood Lumber and Flooring plant showing mill operations with gang rip saw, disc head hardwood matcher and end matchers

the progressive type and of the most modern design, adjoin the mill. They are constructed of tile blocks, and have a drying capacity of 215,000 feet of birch, maple and oak every seven days.

The lumber is conveyed into the dry kilns on trucks, which run on four sets of rails. After being dried by steam heat at 180 deg. Fah. for six or seven days, the lumber on the trucks is run out at the other end of the kilns to one side of the mill. The lumber is carried by a chain conveyor system to the gang rip saw, which rips the board in one operation into five or six strips. These are placed on trucks and sent on to the latest P. B. Yates A 7 tongue and groove matcher (equipped with a feeding table), which runs the lumber through at the rate of 150 to 175 lineal feet per minute. This machine, representing the leading type, is worth more than a passing mention. As all lumbermen know, hardwoods have considerably advanced in value, due in a large measure to the increased demands for the higher grades, and therefore a scarcity of supply. This has naturally caused manufacturers to turn their attention to the narrower and rougher stock. This material, being brashy and of lower grade, necessitated manufacturers facing the question of making fine, beautifully finished flooring from these lower grades of hardwood.

The P. B. Yates Machine Company, Limited, claim that their A 7 Disc Head Hardwood matcher solves the problem, and that their 16 Knives Disc Cutter will turn low grade, crashy pieces into the very finest finished flooring, with a glossy-smooth, soft, clean-cut surface, on which there does not appear any sign of knife mark. Two outstanding features are claimed for this machine. The patented milling type of finishing cutter-head and the matter of feeding stock on its edge through the machine. Three-eighths and thirteen-sixteenths inch flooring are handled with equal ease by the machine.

After leaving this machine the flooring goes to a trim saw and is then conveyed by belt and chain conveyors to the tongue and groove end matchers, after which it is raised on a belt conveyor to the next storey, where the flooring is graded into selected, clear, No. 1, No. 2, and No. 3, and tied on two standard tying machines. It is then piled in the steam heated stock room, all the grades and thicknesses being kept separate. The stock is now ready for deli-

very by motor trucks and teams to any part of the city, and by rail to Canadian and American points.

The company have a machine shop on the ground floor. This is equipped with a press drill, automatic saw filer, and automatic knife grinder. Adjoining the shop is a store room and garage.

The manager of this new flooring concern is J. H. Bernard, who was manager of the Seaman, Kent Co. for 14 years in Montreal. The superintendent is A. Cloutier, a millwright and flooring manufacturer of 20 years' experience.

The Shevlin-Clarke Mills Are Active

The Shevlin-Clarke Co., of Fort Frances, Ont., are operating both their mills, running 20 hours a day, and their cut will be 25 per cent. greater than last year. The firm, of which B. W. Lakin is general-manager, have so far this season had plenty of labor but expect there will be a shortage when harvest sets in.

The Shevlin-Clarke Co. have found their Canadian business very satisfactory and have shipped a large portion of their output to the United States. While their trade over the line has been only about 60 per cent. of normal, prices have remained firm.

Forest fires have been quite bad in the Fort Frances district but recent rains quenched the flames and there should be no more damage this season. The Shevlin-Clarke Co. were fortunate in not having any of their timber burned.

Veteran Lumberman Climbs Brock's Monument

Alexander Forsyth Cranston, a pioneer of Peel County, recently climbed to the top of Brock's Monument at Queenston Heights, Ont., although 92 years old. To mount step by step the summit of this tall shaft which marks one of Canada's greatest military heroes, is regarded as quite an achievement by a person, even in mid-life, and when a monagenarian performs the feat, it is something quite unusual.

Mr. Cranston came to Canada from Scotland. The voyage out was made on a sailing ship carrying 700 people and occupied nine weeks. Mr. Cranston settled in Peel where he made his home, and as the years passed he became known as the owner of one of the largest and best-operated custom sawmills in that district. Old-timers of Peel still remember when they used to draw logs to Alex. Cranston's mill in conjunction with which he operated a big farm.

Despite his advanced age, Mr. Cranston still takes delight in curling and a treasured possession is a set of brass-handled "stones" passed down from father to son for many generations. He has seven children and fourteen grandchildren all living.

Keewatin Lumber Co. Running Both Mills

The Keewatin Lumber Co., Kenora, Ont., of which D. McLeod is general-manager, are operating both their mills at the present time running day shifts only. The company expect to continue to conduct matters in this way during the balance of the season. Their log supply is considerably less than was expected last fall on account of inefficient labor in the bush and the deep snow which prevailed.

The demand for lumber, the firm state, has fallen off to a considerable extent during the last month but they believe that, following the assurance of a big harvest which is expected to attain record proportions throughout Western Canada and the Middle Western States, business will improve. Production costs are still high and the tendency is that they will go higher rather than lower during the balance of the season.

Lots of Business for Western Mills

British Columbia sawmills are booked up for the next two months. In the past two weeks orders have been placed for 8,000,000 feet of Port Pirie mining timber for August-September loading, which, with other orders, has taxed the capacity of the mills for early deliveries. Port Pirie has placed orders for a total of 20,000,000 feet of these timbers with coast mills since the beginning of the year.

The first British Admiralty inquiry for lumber in a year came to the market lately, and is a mixed specification of construction timbers amounting to about 2,500,000 feet. A canvass of the mills reveals the fact that it will be difficult for British Columbia plants to take on some of this cutting if the order is placed, as the lengths are beyond the capacity of the majority of the mills, and the big plants that can take the order are, at present, short of long length logs.

No activity has been shown in shingles. A few orders are drifting, and the mills that are closed for repairs or awaiting an improvement in conditions do not see anything that would justify their opening. Prices for shingles are still low. There is plenty of cedar in the market, but the fir log surplus is not very large.

Has Wide Experience in Engineering Line

D. C. Patmore, Orillia, Ont.

Lumber Co., Park Falls, Wis.; Craig Mountain Lumber Co., Winchester, Idaho; Madera Lumber Co., Madera, Mexico; Big Blackfoot Lumber Co., St. Regis, Montana, and the Hope Lumber Co., Hope, Idaho. Mr. Patmore has been residing in Orillia since 1913. Outside of the profession in which he is engaged, his chief hobby is Masonry. He is Grand Superintendent in Chapter, Georgian district, No. 9, and a member of Barrie Lodge of Perfection, Barrie; Spry Chapter, Rose Croix, Barrie, and of Moore Consistory, Hamilton (32°).

D. C. Patmore, chief engineer of the E. Long Mig. Co., manufacturers of sawmill machinery, Orillia, Ont., has just completed ten years of service with the firm. Mr. Patmore has had an interesting career and served his time as apprentice to the machinist trade in a locomotive shop. He went to Minneapolis in 1905 to work as draftsman for W. A. Wilkinson, consulting engineer and contractor, building timber manufacturing plants, including sawmills and planing mills. After two years in Minneapolis he went out on construction work for Mr. Wilkinson, in which capacity he served six years. Mr. Patmore worked as designer and assistant superintendent of construction on mills for the Panhandle Lumber Co., Spirit Lake, Idaho; the Atwood

Mr. Leggatt is Appointed Inspector

George Leggatt, of Vancouver, has been appointed Eastern Inspector of B. C. forest products, with headquarters in Toronto. The decision to place an inspector in the East was reached a few days ago by the B. C. Lumber Manufacturers' Association and the B. C. Wholesalers' Lumber and Shingle Association.

Mr. Leggatt comes highly recommended for the position, having for some time past been on the staff of the Pacific Lumber Inspection Bureau. Previous to that he was manager of a mill in the Fraser Valley. He also spent several years on the Inspection Bureau before taking the post of mill manager.

The appointment of an inspector in the East will remove any misunderstanding or dispute with respect to quality, grade, shortage, etc., and tend to enlarge the friendly relations between the East and West. For many years the selection of a competent lumber inspector has been advocated, but it is only recently that plans took definite shape. In all cases of "trouble" the inspector will report on the condition of the lumber as found by him, and the terms of sale of Western mills will in all likelihood include an agreement for both buyer and seller to be governed by the ruling of the inspector.

The temporary headquarters of Mr. Leggatt will be at the office of the B. C. Lumber Commission, 51 Yonge St., Toronto.

Empire Forestry Delegates Will Visit West

The delegates to the Empire Forestry Conference, which opens in Ottawa this month, will visit British Columbia later in August. After travelling through the interior, the party will arrive in Vancouver on August 30th, when they will be banqueted by the Provincial Government at the hotel "Vancouver." The following day the delegates will pay a visit to the plant of the Canadian Western Lumber Co. at Fraser Mills, where H. J. Mackin, mills manager, will have some specially selected sticks to put through the main mill. The party will be the guests of the Buckland Development Co. on a trip to the company's operations at Jervis Inlet on September 1st.

The following is a tentative programme of the British Columbia trip of the Imperial Forestry Conference:—

August 25, Jasper-Kamloops.

August 26, Lake Louise and Banff.

August 27, Sicamous and Shuswap Lake.

August 28, Mara Lake; demonstration of effect of fires and evidence of fire fighting methods; dinner at Chase by Mountain Lumbermen's Association, and inspection of Adam's River Lumber Co.'s plant.

August 29, trip through Nicola Valley Pine Co.'s operations.

August 30, arrive Vancouver early morning; visits to local

plants; banquet under auspices of B. C. Government at Hotel Vancouver 7.30 p.m.

August 31, visit to Fraser Mills, lunch at New Westminster.

September 1, visit to Bucklin operations at Jervis Inlet; afternoon trip to Powell River.

September 2, leave Powell River for Campbell River; night trip to Read Bay.

September 3, visit to Wilson Brady operations, Read Bay; arrive Alert Bay in evening.

September 4, visit to Nimpkish Logging Co., Nimpkish Lake.

September 5, Union Bay motor trip through Nanaimo to Victoria.

September 6, final meeting in Victoria, presentation of resolutions and closing of the conference.

The conference aims to consider the timber resources of the British Empire, and the delegates will be present, not only from the Motherland but from Australia, New Zealand, South Africa, India and British Guiana. The visitors will land at Victoria on September 6th, after making a tour of Cowichan Lake and other famous timber areas of Vancouver Island.

Another Lumberman Joins Silent Majority

James B. Leitch, manager of the Wilson Lumber Co., Limited, foot of Spadina Ave., Toronto, passed away on July 13 at his home, 12 Glen Elm Ave., after a brief illness. Mr. Leitch, who was widely known in lumber circles, was born in the province of Quebec 60 years ago and had resided in Toronto for about a quarter of a century. For many years he was associated with the late James G. Cane, wholesale lumber dealer, and for the last few years with the Wilson Lumber Co.

Mr. Leitch, who was a member of Jarvis St. Baptist Church, was a capable salesman and established a wide connection with the trade. He is survived by his wife and two daughters, Mrs. Merrick, of Toronto, and Mrs. Samson, of Lewiston, Maine. The funeral took place on July 14 to Mount Pleasant Cemetery, and was attended by a large number of friends in the lumber arena.

Death of Popular Eastern Lumberman

George W. Upham, of Fredericton, N. B., who was a former member of the provincial government for Carleton County, passed away lately at the age of sixty-one years. He had been ill for some time. The late Mr. Upham was well known and was prominent in the lumber business. He sold out his interests on the Tobique a few years ago to the Fraser Companies, Limited. Then he removed from Woodstock to Fredericton and again entered the lumber business, constructing a new mill at Deersdale on the Transcontinental division of the Canadian National Railways, which was opened last spring.

Mr. Upham is survived by his wife and three daughters, Mrs. J. Brittain, Moncton, Mrs. Ralph Gibson, Woodstock, and Miss Marion Upham, at home. One brother, Frank Upham, Woodstock, also survives.

Ninety Per Cent. Caused by Human Agencies

Having blazed the trail in the application of air-craft to peace time purposes, the Dominion Government is now quite prepared to retire from the field and leave it to commercial enterprise, J. A. Wilson, secretary of the Air Board, told one section of the American Society of Mechanical Engineers convention lately.

A discussion followed in which W. S. Jacobs, Hartford, Conn., enquired for the cause of forest fires and what is being done to overcome this menace.

Mr. Wilson replied, that according to the foresters, 90 per cent of these conflagrations are caused by human agencies.

What Discourtesy Sometimes Costs

Recently we were in a retail lumber yard that is a live advertiser, progressive in equipment and in its methods of handling stock; but within less than a half hour in the plant we saw one traveling salesman and one customer affronted by a discourtesy employee.

As the salesman left this thought occurred to us:

there goes a man who will do everything he can to help that firm's competitor and he is in a position to be a most valuable ally."

As the customer left this thought occurred to us: "there goes a customer who will walk into the other yard already two-thirds sold."

—Wood Construction.

Mr. Edwards Heads New Ottawa Firm

D. Kemp Edwards, who is president and general manager of the newly incorporated company of D. Kemp Edwards, Limited, Ottawa, Ont., is well known to the lumber industry of the capital city. The organization starts out under favorable conditions, possessing a good yard and plant. The George Mason mill property was purchased some time ago and extensive repairs and improvements have been carried out and business has opened up promisingly. The site is at the west end of the city on Bayswater Ave. at the junction of Wellington & Somerset Sts. The premises are well equipped, having a planing mill and sash and door factory, extensive shed storage and also heated storage. The yard and siding are conveniently located near the mill and all the buildings are equipped with an automatic sprinkler system.

The officers of the newly-organized company are,—D. Kemp Edwards, president and manager; A. S. Laird, (late of the Canadian Bank of Commerce), secretary-treasurer, and W. O. Miller, late of

On the left is J. C. Edwards of Ottawa and on the right, his nephew, D. Kemp Edwards. Both of them are well known in lumber circles in Ottawa valley

W. C. Edwards & Co., sales manager. Mr. Edwards has a large personal acquaintance with building contractors and the members of the trade in Ottawa, and has been closely identified with the lumber arena for a quarter of a century. In 1895 he decided to follow the architectural profession and joined the staff of the Capital Planing Mill, Ottawa, which was then operated by W. C. Edwards & Co., his idea being to learn some of the practical work required in his new profession. As matters developed he remained with that organization five years and got his first training in the retail lumber arena. The last two years that he was with the "Capital" he was in charge of the office.

In the summer of 1900 Mr. Edwards went on a holiday to the Old Country and returning in the fall, became associated with the late George M. Mason, who had just entered the retail line on his own behalf. A small start was made in rented buildings but the business grew and the relations of Mr. Edwards and Mr. Mason were most pleasant, extending over a period of 19 years. Shortly after the death of Mr. Mason, the subject of this reference became associated with W. C. Edwards & Co. at their new Edinburgh mills in Ottawa and remained there until the consummation of the sale of the property to the Gatineau Company. He then managed the retail department for W. C. Edwards & Co. at the Somerset St. mill until last fall when he went on an extended trip to the south.

The accompanying illustration shows D. Kemp Edwards on the right and his uncle, J. C. Edwards, on the left. The latter is in his 86th year and is hale and hearty. From the inception of W. C. Edwards & Co. he was a senior partner until he retired some years ago. "J. C." has always been a good lumberman as well as an enthusiastic traveller and tourist. D. Kemp Edwards and his venerable uncle during last winter motored from Ottawa to Central Florida, and after spending two months there, went to Cuba by way of Key West. Two weeks were spent in seeing the Island; then the twain left for Jamaica where they passed five weeks mostly in the hill

country, returning to Florida via Nassau, B.W.I. After a fortnight in the British West Indies, they returned to Florida and Savannah, Ga. They landed back in Ottawa about the middle of April last and then D. Kemp Edwards began negotiations which led up to his present business connection.

Ottawa Firm Running Plant Overtime

James Davidson's Sons, of Ottawa, report at the present time they are exceedingly busy and they have been running their plant until 9 o'clock every night. The prospects are that this active state of affairs will continue for the next couple of months.

Speaking to the "Canada Lumberman," Grant Davidson said that the building trade in Ottawa was late in starting up last spring owing to the season being so backward, and operations are, at least, six weeks behind compared with last year. The company did not go into the bush at all last winter as they had a large stock of lumber on hand at their sawmill at Davidson, Que. At the present time they have opened two camps and have about 100 men in each camp. The firm expect to cut about 12,000,000 feet, of which 75 per cent. will be white pine.

Some improvements are being made to the Davidson sawmill. The lath mill is being doubled in capacity and the new equipment is being installed by the P. Payette Co., of Penetanguishene, Ont., who have also equipped the plant with a new log carriage, the old one having been discarded.

E. Keith Davidson, junior member of the firm of James Davidson's Sons, Ottawa, joined the ranks of the benedicts last month and he and bride have been spending their honeymoon in London, England.

Northern Firm Has Good Operating Season

William Milne & Sons, of North Bay, whose plant is located at Trout Mills, Ont., state that business with them has been prospering during the last few seasons. They have about 7,000,000 feet of excellent quality of red and white pine to cut this season and are selling it at a very satisfactory figure. The firm report having had some trouble with the labor problem this year as it is getting more and more difficult each season to get efficient workmen for the woods and for loading logs on cars. Labor at the mill, however, has been more satisfactory and easier to deal with. Since the conflagration which burned the lumber in the yard last year, the firm have been putting in new sidings and have the yard in a much better condition than before. The mill has been refitted and put in excellent shape.

William Milne, Sr., who is a veteran operator of the North is general manager of the firm. He has two sons, Fred Milne, who is mill manager and Lieut. Col. W. H. Milne, superintendent of woods and logging operations.

Montreal Lumbermen Will Play Golf

Preliminary arrangements have been made for a Montreal golf tournament open to all lumbermen in Montreal. The details are in the hands of the following committee:—Messrs. J. Buchanan; A. H. Campbell; C. Villiers; A. Fenton; W. B. Blair; E. C. Plant and W. Cote. The tournament will be held at Beaconsfield during the second or third week in August.

It is proposed to hold the tournament in the morning, followed by a luncheon. Everyone entering must produce his club handicap certified by the secretary of the club to which he belongs.

Four cups will be competed for. The first, second and third will be for the best net scores and the fourth for the best gross score, but none can win more than one prize. The cups will be presented by the "Canada Lumberman," and Messrs. E. H. Lemay; Arthur H. Campbell and L. G. Gravel.

B.C. Lumber Inspection in East

For several weeks lumbermen of British Columbia have been working on a scheme for lumber inspection and 50 prominent members of the trade have joined the association for better inspection of both lumber and shingles.

Two inspectors will be located at eastern points, one being in Toronto and the other in all probability in Montreal, and in the case of questions arising on quality, grade, shortages of anything affecting the distribution of lumber, these men will have the confidence of the association and will be ordered to report on the condition of the lumber as found by them. The terms of sale include an agreement for both buyer and seller to be governed by ruling of inspectors.

The following officers of the association, whose headquarters are at Vancouver, have been appointed: President, F. R. Pendleton; vice-president, P. D. Roe; directors, H. K. Agnew, J. A. McMillan, R. Underhill; secretary, E. M. Deering.

Retail Lumberman and His Delivery Problem

—Delivering Lumber by Tractor—

By L. G. Jackson

In the preceding issues of the "Canada Lumberman" we discussed means of delivering lumber by motor truck and motor truck and trailer. It is the purpose of this article to tell of some of the ways of delivering and moving lumber by means of kerosene driven tractors and trailers.

Today the tractor has reached such a stage of perfection that we do not hesitate to purchase one because we know that the experimental work has been completed and they are a proven necessity.

We are faced here in Canada with a problem which is unique, in that we are permitting it to continue; namely, the building of our streets and roads last, we erect our houses first and then build the roads. To a country where economical transportation means so much and where we must conquer long distances in the shortest possible time we surely are slow in correcting this evil.

Since the termination of the Great War we have faced an ever rising cost of operation in everything concerning building and yet one of the means of cutting our costs has been sadly neglected; and that is, the improvement of our roads and streets and more particularly the latter, for over them the retail lumber dealer must travel in order to deliver his products.

Thus we have the reason for so many lumbermen purchasing tractors to haul their loads to the jobs. Quickly and concisely it is summed up in these words, "more power to you." The name tractor" is significant of something powerful, an engine developing great draw bar pull and slow of movement, but not so slow as to be a detriment. Its road speed is somewhat lowered because of the greater tractive effort at the rear wheels, yet the road speed is left at a reasonable rate.

Where the Tractor Can Travel

Another feature worthy of due consideration is the fact that the weight of a tractor capable of hauling a certain tonnage is much less than that of a truck of the same rating. This then will permit of the tractor traversing roads which to the truck would be impassable.

As the weight carried is usually on a vehicle separate from that generating the motive power it is reasonable to say that we can go over ground which would not bear the combined weight of truck and load.

Due to their comparative short wheel base and ease of operation we find tractors replacing the team on single horse for yard work, as well as being used for long distance delivery or inter-yard haulage.

Then again when unloading cars which are at a distance from the yard, the usual two-wheel yard trucks can be used and a continuous circuit of loaded and empty trucks can be maintained between the cars and the yard so that even when the car has to be sorted and distributed to different parts of the yard, one can maintain a direct circuit with as little lost time as possible by placing the trucks at

their different piles and not holding up either those employed at the cars or the piles.

In these articles it is not the desire to bring forward the merits of one system more than another, nor to submit arguments for the trucks or tractors which tend to speak more favorably of one particular make than another, yet in writing on this subject one cannot help but point out that tractors equipped with caterpillar treads would be the most suitable for logging operations and in the woods where snow, ice and unmade ground make the going particularly difficult. That is the only point we will advance regarding using tractors in the handling of lumber apart from retail yards. This article would not be complete without some reference to their use in the production end of lumber manufacturing. We recognize that our readers are not all retailers hence the preceding suggestion regarding tractor equipment.

The Various Uses of the Tractor

In the purchase of tractors for your yard it would be necessary to study many types and various component parts of equipment as no two yards will use their tractor equipment alike. For example, some yards would use tractors as purely yard equipment, for hauling from yard to mill and pile to pile.

Others again would deliver by means of tractor and trailer, while others will haul from their mill to other yards in various parts of the city, so that the installation of tractors and equipment will depend upon the use to which it is to be put.

Should any readers of the "Canada Lumberman" desire expert advice on purchase and installation of tractors and trailers we will be pleased to assist them and advise for their proper equipment.

It has been our desire in this as well as in preceding articles, to point out some few ways in which tractors are used to-day in delivery of the products of retail lumber yards and, in the near future, we will give some idea of the cost of operating tractors compared with delivery by truck.

The forests of the province of Quebec which were closed for several weeks owing to the outbreak of forest fires, have now been reopened in certain sections. Permits are being issued by the forestry branch to certain persons desiring to enter the woods, but these permits are granted only after a careful examination of the applicants. A warning is also given that they must be very careful not to start a conflagration. Gradually with the danger of forest fires diminishing, the remainder of the forest area will be reopened and permits issued those who enter the bush.

Scientific management is not a machine that can merely be "installed" and expected to produce results. It is, indeed, a principle that must be learned for its successful application.

How the tractor is solving delivery problem of live Toronto firm

Legal Discussions of Much Interest

The memorable fourth of October 1922, when Haileybury was destroyed by forest fires, was recalled recently in Toronto, by a judgment delivered by Mr. Justice Orde, in the action brought by Samuel McChesney and son of Timmins, against the Northern Canadian Power Company, Limited. The case was tried on October 2nd, 3rd and 4th at Haileybury. As it was drawing to a close the heavy pall of smoke made the courtroom dark. The case closed at 2.45 in the afternoon. At 3.45 Mr. Justice Orde was forced by the imminent threat of fire to adjourn court. In an hour and a half thereafter the courthouse was a pile of ruins. Mr. Justice Orde carried the record of the case away safely, and today gave judgment dismissing the action, which was to recover \$4,011.68 damages for injuries caused by flooding the McChesney saw mill at Timmins Landing, in April, 1921. The saw mill was built not on the parcel of land owned by the McChesney outfit, but on the road allowance along the Matagami River.

The power company has a dam at Sandy Falls, nine miles down the river, and several controlling dams higher up, above Timmins Landing. It was alleged that these dams caused a flood in April, 1921. Mr. Justice Orde holds that there would have been a flood anyway, that spring. He further holds that the saw mill being upon Crown lands, the defendants are not entitled to recover any damages.

Legal Dispute over Lumber Cut

A case of Phillips vs. Corey arising out of a lumber dispute was concluded recently in the Queen's County Circuit Court when the jury brought in a verdict in favor of the plaintiff. More than two years ago John L. Phillips entered into contract with Jason A. Corey of Cole's island, to cut and deliver to the bank of the Cain's River, certain logs, the said logs to be delivered by May 1, 1921. Corey, it is said, agreed to pay \$8 per 1,000 feet, the bills to be paid after the lumber had been measured. The logs were duly cut and surveyed and the amount agreed upon was 208,000 feet. After considerable details as to the working of the agreement, a misunderstanding as to the lumber cut and other details had been gone into, the jury returned a verdict in favor of the plaintiff, awarded him \$696.51.

Mill Destroyed and Lumberman Enters Suit

Nine witnesses gave evidence before the commission appointed by the New Brunswick Legislature to investigate a claim of an unusual nature made by J. D. McLaughlin, of Red Rapids, N.B., against the province for \$75,000. The hearing took place at St. Quentin, Restigouche County, N.B., recently, before the commission, which was made up of the following: Hon. J. E. Michaud, chairman; A. F. Bentley, Fred W. Smith, John A. Young, and G. W. Warnock. After taking the evidence the hearing was adjourned to take place in Fredericton at a later date.

A. T. Leblanc, of Campbellton, represented Mr. McLaughlin, who is claiming compensation for the loss of his lumber mill, and property at St. Quentin, Restigouche county, in May, 1921. It is alleged that during the forest fire season, Mr. McLaughlin had a crew of men engaged to protect his property, but these were taken by forest rangers to fight fires in the vicinity, and while they were thus engaged his mill and other property were destroyed by fire.

Mr. McLaughlin gave evidence, and officials of the Crown lands department were also heard, as well as several of the people of St. Quentin.

Hon. Mr. Michaud said that the evidence would be carefully considered by the commission, and that a finding would be made, and submitted to the Government.

Newsy Paragraphs from the East

According to late figures published as to the approximate loss during the devastating forest fires, which swept through the province of New Brunswick recently 350 to 400 square miles of territory or approximately one quarter of a million acres have been burned. No official information is as yet available, but the members of the Department of Lands and Mines are actively engaged compiling statistics as well as the various private owners and lumber companies are doing likewise. They are hoping to have these figures ready before another conflagration breaks out. Up to a few days ago the fire hazard was serious, but heavy rains throughout the province have been highly beneficial in eliminating this to a marked degree.

The cause of this appalling loss is being thoroughly investigated

and it is expected that there will be some interesting revelations. A fine of \$40 was recently imposed on a resident of Muniac, Carleton County, for being responsible for causing a forest fire. Prosecutions following the fires are reported coming in increased numbers at various sections of the province. During the next couple of weeks no less than sixteen fishermen will face charges of setting fires in the woods. Other arrests had been made at Grand Falls and convictions were expected.

A fire, which for a time assumed alarming proportions broke out recently at Shanklin Settlement, St. John County. It started in the woods at a place where lumber operations had been carried on during the winter. With dry weather prevailing and a strong wind blowing the surrounding woods were soon a roaring fire. Councillor Shanklin organized a band of fighters and before many hours the blaze was under control. It is estimated that about fifty acres were burned over. For a time the Pejepscot Paper Company's property was threatened, but hard work by the men saved the situation.

Heavy losses of all kinds of game animals and birds are reported by those surveying the burned over areas. Chief Game Warden L. A. Gagnon, following a return from Campbellton recently, received numerous reports showing that a large number of burned carcasses of moose and deer had been seen by the men. In some instances large numbers of the animals were seen by forest fighters rushing from burning areas and their hides badly scorched. So far the largest game territories in northern New Brunswick have so far escaped.

Millions of army caterpillars have appeared in the northern part of the province and in many places the forests are denuded of leaves. These insects are completely stripping leaves from hardwoods and from poplar and birch, but for some reason seem to be keeping clear of the maples.

At the crown land office in Fredericton recently a timber berth consisting of eight and a half square miles on the head of Sand Brook, Clarendon Settlement, Charlotte County, was bid in by the applicant, Fraser Company, Ltd. at the upset price.

A serious strike caused no end of trouble to lumber shippers on the Miramichi and as a result boat loading at the Snowball, Buckley and Sinclair mills was affected. From recent reports loading operations at the Miramichi Lumber Company's rossing mill for shipment of pulpwood to Portland, Me., was going on, the work being carried on by non-union men.

Windsor Lumber Firm Introduces New Features

(Continued from page 39)

Own-Your-Home Campaigns, Fall Fairs, etc. On one of their service trucks there are painted on each side of the seat in striking black letters upon a yellow background the words "Time is Money, Windsor Lumber Co., Limited, Service Truck."

In the delivery department are four trucks, one of 2½ tons, one

New fire station and hose reel in the yard of the Windsor Lumber Co., Windsor, Ontario

of 1½ tons and two of 1-ton capacity, and also four, 3-ton trailers are used, thus keeping things constantly on the move. The company looks after the overhauling, washing, cleaning and repairing of all their service outfit. When one of the motor vehicles of J. C. Scofield drives up to the door of a customer with a load of lumber, lath, shingles or millwork, everything about the conveyance is as spick and span as the yard from which it came.

No. 15

Lumber Dealer Should Have Civic Pride

The statement that appearances count may seem trite and banal, but its significance and import are worth considering. This observation with respect to attractiveness applies not only in a personal way but to office premises, factory, mill yard and general surroundings.

Too often does the retail lumberman seek to build up trade amid surroundings and buildings that are neither a credit to himself nor to the community. When everything is kept spick and span favorable notice is called forth and the indirect effect cannot be measured.

The Southwestern Ontario Retail Lumber Dealers' Association is inaugurating a competition in well-kept lumber yards and, in seeking to draft conditions whereby a friendly contest will be conducted is doing a work that will be far-reaching in its results and one that is worthy of emulation.

No one likes to buy lumber at a dilapidated, run-down-at-the-heels yard any more than he likes to transact business with an unshaven, seedy-looking salesman. Women buyers are particularly attracted by a yard or office that is right up to the minute in appearance and appointments, and it must be reckoned that, in these days of home-building and special built-in features, which embody the use of lumber, the lady of the house wields a deal of influence.

In this edition of the "Canada Lumberman" there appears the picture of a model yard in Western Ontario where the front is adorned with vines, shrubs and flowers. The effect of the example set by this concern is that it has encouraged similar effect on the part of others in the same line and had an influence in improving the whole community. It is important for every lumber dealer to keep his premises neat and tidy. Paint is a cheap and easily applied commodity and yields big returns on an investment. Fences and buildings that are well covered always point the way to better business.

Exterior embellishments make a lumber yard inviting and even imposing, and when the yardman does something practical and progressive, he is the pace-maker in a town or city. No yard that is "decorated" with weeds, rubbish, loose ends and general litter, ever inspired anyone to build or to undertake, as our rural friends would say, a "slickening-up process."

Some may term such things as frills, geegaws, etc., but nevertheless they have an effect in raising the tone and standard of any centre. Where some alert and far-seeing retail lumberman points the

way, he shows that he possesses the ability to lead and direct the energies and actions of others as well as map out a course in his own career that inevitably spells larger business, better service and satisfied patrons. In every way it pays to make the lumber yard and office attractive and keep them so that they are show-places rather than an eyesore or a relic of better days.

Should Be Just Before Generous

On another page the arguments for and against a prohibition of the export of pulpwood are summarized. After all, the views of those interested in this question are mainly determined by their commercial affiliations. It is certain that the representatives of the American companies, who are so vigorous in their protests against the threatened embargo, would take a widely different attitude were the positions reversed. The United States has little regard for other nations when it comes to a question of protecting her industries. The Fordney tariff is an example of the lengths the extreme Protectionists will go in order to keep out foreign commodities, many of the provisions being aimed at Canada, one of the best customers of the States. When, however, this country takes power to prevent her forests being depleted in order to supply our neighbors with raw material, Canadians are accused of enacting legislation which is characterized as "an unfriendly act."

Some statements made to influence public opinion in the United States, are, to put it mildly, very misleading. For instance, it is asserted that Canada is endeavoring to secure a monopoly of the paper trade of the continent, which is manifestly absurd to those who have even a limited acquaintance with the facts. Canadians buy very extensively from the United States and are likely to for many years, because the mills make certain lines which are not manufactured in Canada and because the lower prices made possible by the heavy production of American mills.

The prohibition of the export of pulpwood is a purely Canadian matter, and must be decided from the point of the interests of the Dominion. The main question is: can we, in view of our diminishing supplies of pulpwood, afford to go on supplying the United States with the raw material to be made into the finished product, giving employment to American citizens, in preference to our own people?

There may be reasons why, as some Canadians believe, this country should not enforce this embargo, but these have to be considered in the light of what is best for the Dominion.

The followers of Mr. Barnjum would not hesitate in putting an embargo almost at once, regardless of every other interest. The Government has announced its intention to appoint a Commission which will hear all sides, and although Commissions are undesirable as a rule owing to the necessary delay in coming to a decision, in this instance it is probably a wise step so as to give an opportunity for all interests to place their views before the public.

It may be pertinent to point out that unless more efficient measures are taken to prevent forest fires, Canada will have comparatively little pulpwood for her own use and certainly none for export.

Disaster Awaits if the Forests Go

One of the greatest menaces facing Canada today is the progressive destruction of the forest resources. The most expert information shows that ten trees have been wasted by human-set fires to one tree utilized for the service of the Canadian people. This spoliation of what is, in the main, a public owned property, of great immediate utility and quite indispensable to the future of our country, cannot be permitted to proceed much longer. If we are willing to recognize the damaging consequences of forest waste, surely we are willing, as co-partners in Canada's progress, to put a stop right now to a form of public robbery that must be checked if the nation is to survive, says Sir Lomer Gouin, Minister of Justice, in a recent statement.

The forest is the most destructible of all our natural resources. Had it not been for recurrent conflagrations started by human carelessness Canada today would undoubtedly have been the richest forest owner on the globe. Forest scarcity has bred high prices and keen demand, so that every square mile of timber in this Dominion may be said to represent potential employment, municipal development, traffic for our railways, home markets for our farmers, and other valuable commercial gains. It is useless to argue that forests are private property, for eighty five per cent of the forest area of Canada is owned by the people. Even were forest protection nothing more than insurance on the existence of paper and lumber companies and the newspaper industry, the claim on a Canadian citizen's co-operation would be hardly less sensible.

The plain fact of the matter is that one of the steadiest pillars of public revenue, railway traffic, well-paid employment, and the upkeep of hundreds of municipalities is standing timber

Mr. Joyce Speaks on Eastern Conditions

Harold D. Joyce, Montreal

"During the past year or two conditions affecting the wholesaling of lumber have called for careful buying and lately there has been an urgent demand for reasonably-priced goods which have not been easy to secure," said Harold D. Joyce, wholesale lumber dealer, Montreal, in a recent interview with the "Canada Lumberman." "This has been due," he added, "to the fact that many mills have been playing a temporarily advancing market for all it was worth. Some of these mills have boldly confessed that they expect to retrieve this year all they considered 'losses' during the two years preceding 1923. In several cases, however, these losses on the part of the mills were not as serious as they were made out to be. The drop in prices have been largely

shared during these years by the wholesalers, who were carrying a large portion of stock then on hand.

"New England market has never in recent years been more active, but with his usual caution the easterner has been requesting prompt shipment in order to protect himself against what has looked to him like an uncertain future. Prophets among the trade, with the courage to venture an opinion of coming events, have been more reticent than usual. There has been a tendency lately to demand cancellation of orders over a month old. Certain buyers are already anticipating 'victims' among the sellers next fall as those who are too heavily burdened approach pro forma dates.

"It is my opinion the spruce lumber is now at fair standard value, although the advance over a year ago is on the average about 33 1/3 per cent. Hemlock, which is a poor substitute for spruce, has undoubtedly gone beyond its comparative worth. Ontario pine products, both white and red, require careful consideration as regards price from a buyer's viewpoint. Just now the low end 1923 sawing has practically all changed hands and it has been possible to buy the box and better grades to better advantage formerly than at present.

"Building continues unusually active in the larger centres and indications are that it is reasonable to expect a lively fall trade."

Schroeder Mills are Busy Shipping

The Schroeder Mills & Timber Co., Pakesley, Ont., did not owing to the late spring, get their mill in operation until the second week in May, but the plant has been running steadily since at full capacity, averaging a cut of 850,000 feet per week.

The Schroeder Mills & Timber Co. are at present installing a picket mill and expect to have the same running early in August. James Ludgate, manager of the company, states that, barring accidents or shut-downs for any reason, their plant at Pakesley should finish cutting all the stock taken out by November 10th. Men are fairly plentiful at present and wages are slightly higher than last year. The forest fires in May damaged some of their timber but the firm expect to take it all out this season. Prices on lumber are a little lower than usual but sales are good.

The Schroeder Mills & Timber Co., are at present shipping about six cars a day, considerable going to United States Points. The company recently sold 5,000,000 feet of logs to the Cleveland-Sarnia Sawmills Co. This block of logs came down the Pickering River and out at the French.

Average Lumber Cut in Ottawa Valley

Gillies Bros., Braeside, Ont., are running their mill to capacity at the present time, sawing their usual output. Their fireproof electrically-driven plant is operating very nicely at the present time.

It is understood that production in the Ottawa Valley will not be excessive this season. While the Hawkesbury Lumber Company's mill at Hawkesbury, Ont., and the Pembroke Lumber Company's plant at Pembroke will saw at nights for part of the season, other mills are not cutting at all or are not turning out any more than last year, so that on the whole, it is expected, production will not be greatly augmented in the Ottawa district.

The Oldest Lumber Building in America

What is said to be the oldest frame building in the United States is the old Quaker meeting house at Easton, Md., according to a recent issue of the "The American Architect." Local histories place its date of erection in 1684, giving the ancient structure an age of 239 years, and it is said that William Penn attended service in the meeting house while he was trading with the Indians.

This old Quaker meeting house stands where it was built and just as it was built without any change. An occasional replacing of the shingles on the roof and of the weatherboarding are all the repairs it has had since it was erected. Its frame inside and woodwork and some of the weatherboarding are the same as when it was built.

The only preservative used on the wood has been old-fashioned whitewash on the outside. Seven of the original plank seats and the woodwork inside have had no paint whatever. White oak, white pine, cypress and Southern pine from the Maryland forests were the woods used.

Questions and Answers on Forestry

Q.—Does Canada supply the United Kingdom with any large part of her timber requirements?

A.—Only with about ten per cent. The United Kingdom draws more than 85 per cent of her forest needs from outside the Empire. This is due chiefly to the great difference in freight rates as between Canada and the Scandinavian countries.

Q.—What is the strict meaning of a 'timber limit'?

A.—The province of Ontario, Quebec, New Brunswick, and British Columbia own and administer their forest resources. Leases of timber cutting rights are made to various commercial companies, renewable once a year, and the area thus leased is termed a 'limit' or 'berth'. The provinces mentioned retain ownership of practically all their forest lands, except New Brunswick which has alienated about one third.

Funny, Isn't It?

Bill Jones spent fully an hour this morning knocking his Competitors because they were price-cutters and then spent the next hour wrangling with a salesman because the salesman's company didn't cut the price. Finally, we suppose, he placed his business with a price-cutting house and salesman, and will continue to feel pretty satisfied with himself until the shipment comes in.

Self-Education and Personal Effort

It is my personal belief that the best education that a boy or girl can get is obtained by individual industry or personal effort.

Education is experience, and from experience we get knowledge.

Teaching the student an alien tongue loans more chance to talk. To learn how to paint the lily is the golden wish of art. To get a head full of geometry is good, but to cause a hill of potatoes to produce more means much more for the family.

This practical age. The dead languages and the ancient formulas are for the highbrows, but the boy who can solve the problem of more production and better service is the one who will get the high salary and enjoy the big income.

Tens of thousands of young men deplore the fact that they cannot attend College; but remember this, my young friend, the University of Top-Notch Earning is not a Trust. The College is not the Alps of Achievement.

Let the favored financial few feast upon the fruit of so-called education while you continue to get your experience out of the industry that pays you, and during these long evenings supplement your daily experience with the discipline of study.

The lasting satisfaction in Life is to be useful to the greatest number and not merely ornamental.

America needs its professors who will solve the unknown trails over the Milky Way and locate the causes and list the effects; but you just go along with your plan of self-education, and some day they will put you in a class where we find the men who have actually made America.

Lincoln, by the light of a candle and not by the learning of a college, improved himself, and then improved his Opportunity.—The Silent Partner.

How Do You Get at Cost of Lumber

Editor of "Canada Lumberman:"

Sir: I am running a lumber business with a saw mill in which I have a lathe machine, box plant, shingle machine, planing plant and the wood waste from the mill is sold for fire wood purposes and delivered by teams.

To arrive at the cost of the long lumber and the piling of it on the wharf, I deduct from the total wages paid at the mill the wages at the planing mill, lath machine, shingle machine and wages of the men employed in cutting the wood and also the teamsters and teams delivering, debiting these to accounts kept for each of these items, thus showing the actual cost to manufacture long lumber.

This method has been questioned by some manufacturers and they state that is not the way to figure out the long lumber but, that the whole cost of the wages of the mill including lath machine, fire wood and planing plant should be added; these others being by-products should not be considered in arriving at the other cost.

I would like to know how lumber merchants handle this cost accounting or if they do it the way I do it and if not, what method they employ?

Yours truly,
Enquirer.

The "Canada Lumberman" is pleased to open its columns to a discussion of practical cost accounting in the lumber business. This is a subject of much interest at the present juncture in view of the increased expense in production and any system that will aid the producer to arrive at a proper cost basis, is one that will be welcomed on all sides. The letter from "Enquirer" is published in the hope that it will arouse timely consideration and result in valuable pointers and helpful suggestions coming to hand.

Lumber Production in Gravenhurst District

Mickle, Dymont & Son, Gravenhurst, Ont., say that considerable lumber selling is being done locally and while the shipping trade has slackened somewhat during the last month, there seems to be evidence of an outstanding market again in the near future. Labor is somewhat higher and scarcer both for mill and bushmen. Chas. Mickle says that the production in the Gravenhurst district will, on the whole, be smaller than last year. The stock for sale by farmers is less than usual. Apparently a good deal of the most valuable timber was cut during the war. Prices on private lands and prices that can be given for logs are not high enough at the present time to bring out the timber that is not so well situated.

Erect New Mill for Building Papers

J. Ford & Co., Portneuf, Que., paper manufacturers have recently erected a mill building of steel and concrete with two floors. The structure is 80 feet wide by 200 feet long and there is now being installed a cylinder machine 120 inches wide, for the manufacture of roofing felt and other building papers for which the firm expect a brisk demand. The estimated output is 20 tons per 24 hours. J. Ford & Co. expect to have the new machine in operation by August next. The company are also building a concrete dam 270 feet long and 20 feet high which will replace the old dam and double the amount of power available.

The Industries Built Upon Forest Products

Lumbering and the wood-using industries have from earliest times been a strong feature of Canada's industrial and commercial life, but it has only been quite recently that we have had our eyes really opened to the potency of our forests, particularly of pulpwood species, as a magnet to capital and as a source of business expansion, says the "Ottawa Journal."

We have had in late years somewhat the same experience with our Eastern Canadian pulpwood areas as we had a few years earlier with our prairie lands. Both were great national assets which lay dormant for decades and, when development finally reached them, it proceeded in each case with startling rapidity. Likewise in both instances it rested upon export trade—upon hungry markets abroad. In the settlement of Western Canada, however, we had to start the ball rolling ourselves, whereas business enterprise turned its full attention upon our eastern pulpwood resources pretty much of its own initiative. We did not have to exert ourselves very greatly to attract the latter development, and the commercial conditions behind it exhibit little or no evidence that they have yet spent themselves as a force in drawing Canada's forest resources into active use.

Our present trade in wood and paper is not wholly on the selling side, but it is overwhelmingly so. Lumber, shingles, and other saw-timber products constitute a heavy item in the exports, but the chief factor in the remarkable growth of exports has been the rise of the pulp and paper industry. Pulpwood, wood pulp, and paper exports

now surpass the exports of lumber by a very considerable margin.

There is every reason to believe that for the immediate future the further advance of the industries built upon forest products offers one of the most promising avenues of Canadian development. In the matter of ripeness for development our forests are certainly not in the background as compared with arable lands or any other natural resources. It is true also that there is a limit to the annual cut which they can permanently support, but there can be nothing except satisfaction in seeing industry displace the forest fire as the chief consumer of our pulpwood and saw-timber species.

National Wholesalers Will Visit Canada

The National American Wholesale Lumber Association, which will meet in convention in Seattle on Aug. 3 and Aug 4, will spend two days in Vancouver early in August. Leaving Chicago and Minneapolis on July 25-26, the members will be in Winnipeg on July 27, at Banff about July 30, arrive in Vancouver at 7.30 a.m. Tuesday, July 31, and leave at 10.30 on Thursday, Aug. 2. Calling at Victoria en route, the party will reach Seattle on Thursday evening, Aug. 2. The return will be via United States cities.

It is the Real Who Come to the Rescue

"George, how are you?" exclaimed a business man, as a fellow business man entered the office. "Haven't seen you to speak to you for months. Why don't you come around oftener?"

"Why don't you, Jim?"

"Tied down to business, George; that's the only reason."

"Same here. Wouldn't be over now only that I saw in the "Banker and Tradesman" that you were in a bit of trouble. Came over to see if I could give you a friendly hand."

What a friend was that. Came because his friend was in trouble in the financial world.

No doubt there were others, scores of so-called friends who shrugged their shoulders when they learned that financial trouble had singled the business man out, the while congratulating themselves that they were not involved, men who had dropped in from time to time, glad to accept the proffered cigar or go to lunch with Jim, but it was George, who rarely had time to come near, who came to the rescue.

It would be a dreary world were it not for "Angeline" and "George." It is such who renew one's faith in humanity.—Ex.

Life—Its Flow, Eddies and Currents

How like our life is to a tree
When taken from the bush?
And piled on the bank with others to be
Skidded o'er the brink with a push.

Then down it goes on it's mad career,
Till it strikes the water at last.
It's life in the forest, that was so dear
Is now a thing of the past.

For now it must gloat and move away,
Other Powers will it so;
It must keep on moving day by day,
To reach the mill below.

Sometimes ahead, it goes with a dash
A mile or so with the stream;
But sometimes it stops with a sudden crash,
As it lands on a rock, unseen.

The back eddies and treacherous bays,
Are more dangerous than the falls.
Where it drifts around (as in a maze)
And back upstream it crawls.

Then a Watcher on shore has to steer it out,
Till the current again draws it past.
Through rapids, o'er falls and round about,
Till it lands in the boom at last.

L. B. G.

London Firm is Coming to the Front

B. Matthews, London, Ont.

"Ninety-five per cent of our business to-day is contract work, that is, we agree to supply the materials for the buildings but not for the construction. Last year we supplied approximately 20 houses and this year we already have signed contracts for furnishing the material for 52 dwellings besides undertaking several smaller jobs which make up quite a respectable total. We have become crowded for room and are purchasing an adjoining property which will give us about 50,000 square feet of yard space and will relieve the congestion under which we now work. As building wreckers, in which operation we were engaged until early in 1922, we raised structures all over Western Ontario and were the original wreckers in London. We departed from

this line because we could at no time accumulate sufficient stock to supply all the requirements of any one builder. We gradually filled in the stocks in which we were short, with new material until to-day we handle only new lumber exclusively."

So spoke B. Matthews, of the Matthews Lumber Co., 201-205 Horton St., London. This organization, which was started seven years ago this month, has been making substantial progress. Business was begun in a small way by dealing in used material, and eventually this pursuit was discarded and the concern developed into one handling new stock. The company used to buy buildings outright and remove from the premises only the saleable material which they sold to consumers and small contractors and builders. The firm had a good-sized list of carpenters and handy men who bought salvaged materials for most of their jobs. To-day the company are supplying house bills complete in every instance, having only the window frames made by a local firm. Their stock though not very large is complete.

The yards of the Matthews Lumber Co. cover 14,000 square feet, and are located close to a railway siding. The site is almost in the heart of the Forest City. The firm had to fight the Municipal Council for several years before being granted a permit to do business on their present location. The storage sheds cover about 6,000 square feet and contain the stock of dressed lumber, flooring, doors, trim, etc.

The Matthews Lumber Co. have no factory except a small circular saw for ripping and sizing. Delivery is carried out by horses. There are several service waggons, some of which are always loaded and ready. Thus no time is lost and stock is kept on the move. If a customer is in a very great hurry to have a small order filled, he takes the material away with him but under other circumstances, he waits until such time as the firm fill and deliver orders in that section of the city.

Mr. Matthews reports that the company did considerable newspaper advertising last year but so far this season have been exceptionally busy and have not been devoting as much attention to publicity as usual.

Early Timber Operations in Muskoka

Speaking of the picturesque Muskoka district, a writer in a Toronto paper, recalling early lumbering days says: Lonely islands and wilderness shore lines there are still in plenty, but the summer population is large, and it is far from being the place of isolation our fathers knew.

It was in the early sixties that attention turned to Muskoka, says a reader who knows the region intimately. The pine timber industry on the Ottawa River was beginning to decline, owing to the destructive methods of the lumbermen, with their ready market in Europe for square timber, which was floated down the Ottawa and the "Back" River, north of Montreal Island, to Quebec, and there loaded for Liverpool. When attention turned to Muskoka, the lumbermen first operated along the three connected lakes of Muskoka, Rosseau and Joseph. Settlers began to filter in as early as 1860, but they were few in number, and lived largely by the fur trade.

As early as 1862 attempts to convey passengers up the lakes from what is now Gravenhurst to the "North Falls," now Bracebridge, were made by resident settlers to bring in others, one of the younger toilers in the work being the late Aubrey White, later for many years the Deputy Minister of Crown Lands for Ontario.

In the fall of 1865, while Confederation was still pending, the late Alexander P. Cockburn, whose earlier years had been spent in the township of Eldon, in the watershed between the Trent and the Severn systems, found his way to the Muskoka lakes, and was putting a steamer into service. The small "Wenonah" was the immediate result, with her first trip on Muskoka Lake and Muskoka River to Bracebridge on August 6, 1866. Aubrey White soon joined the crew of the Wenonah, along with George Bailey, who is still Commodore of the Muskoka Lakes Navigation Company's fleet. Mr. White, who gave many years of efficient service to the Province in the Crown Lands administration, passed away some years ago.

Montreal Lumbermen Will Hold Golf Tourney

Arrangements are being made for a golf tournament for the lumbermen of Montreal. This will be held at the Beaconsfield Golf Club, the directors of which have kindly placed the greens at the disposal of the lumber trade for this competition.

The tournament is open to the entire lumber trade in Montreal—manufacturers, wholesalers, retailers, sash and door manufacturers and box manufacturers, and includes the office staff of any firm.

Cups have been donated by the "Canada Lumberman"; E. H. Lemay, Arthur H. Campbell and L. G. Gravel. Three of the prizes are for the best net scores and the fourth for the best gross score. None can win more than one prize.

All entries must be sent to F. H. Devenish, B32 Board of Trade, Montreal, not later than Wednesday August 8th, accompanied by the entrant's handicap certified by the secretary of the club of which he is a member. The entrance fee of \$1 must also accompany the application.

The play will consist of 18 holes and the competition will commence at about 9 o'clock. This will be followed by a luncheon.

The following committee have the arrangements in hand: Messrs. C. Villiers; W. B. Blair; E. C. Plant; Arthur H. Campbell; A. Fenton; J. Buchanan and W. H. Cote.

Northern Ontario Should Not be Knocked

The stories published in the papers and throughout Ontario in regard to the recent fires call for action by the Board of Trade and other organizations in the North, says the "Broke Hustler" a weekly newspaper published at Iroquois Falls, Ont., by the Abitibi Power and Paper Co., Limited.

If the reports appearing in the southern papers were to be believed, the whole north country was ablaze for the past two weeks. The whole forest from the Quebec boundary to the Manitoba boundary was on fire. The inhabitants of every town and village were staring death in the face. The suffering and misery were intense.

It is nothing less than a crime that such stories should be printed when they are so wide of the truth. The falsehood is so glaring that it impels the question "Is the northland being knocked by someone or some group for some purpose of their own?"

In some of the papers the fire outside Timmins was made to appear as if it was threatening the town and hundreds of inhabitants were fleeing to the lake as their only place of safety. This was put across the top of one paper in letters over an inch high.

The fact is that Timmins was never threatened. There were a number of small settlers' fires which should not have been lit and which with no rain and with high winds might have become dangerous. But not a single building was burned and not a single person injured. A small amount of bush was burned by this injudicious setting out of fire and that was all. Yet this was made down below to look like the whole north land on fire.

In all this part of the north country there has been no damage except at Norembega, which village was wiped out in a local fire.

The circumstances surrounding this fire should be known for it shows that the people of the north are sometimes themselves to blame for the fate that befalls them.

Settlers at Norembega set out fire. The Provincial fire ranger and the Abitibi Co. rangers acting together put out the fires and warned the settlers of the danger. Several of them, but one especially, argued that there was no danger. After the fire rangers left they set out fires again. The wind changed and the fire swept over the farms of the very men who set the fires and wiped out the village.

The people of the north are men of high courage. They are not afraid of the truth. They have no kick about the truth of the fire situation being published, but they have a decided objection to the south part of the province being fed wildly exaggerated stories tending to scare relatives in the south, and to prevent others from coming to this great north to live.

The north is the greatest asset the province has, yet the papers of the south, by publishing these wild rumors, are doing their best to hold back the development of this part of the country.

Newly Organized Lumber Co. Going Strong

The Brown-Sword Co., Belleville, Ont., have been reorganized and a new company incorporated which will be known as the Angus-Keefer Lumber Co., Limited. The company has an authorized capitalization of \$50,000. They manufacture sash and doors and deal in lumber in a retail way.

Prior to their being taken over by the Angus-Keefer Lumber Co., the Brown-Sword Co. have been established for five years. In 1919 the business was acquired by Messrs. J. E. Angus and N. Keefer. Since then the turn-over of the firm has increased greatly and connections in centres outside of Belleville have been firmly established.

The active management of the new company is in the hands of the president, J. E. Angus, who has had a valuable experience in the lumber business in Toronto and Belleville. A. E. Brown, vice-president, has been connected with some of the largest woodworking factories in Canada for the past 25 years, his duties being largely managerial and executive. He will superintend the work in the factory. The secretary-treasurer, N. Keefer, graduated in architecture from the University of Toronto in 1914, from which time he had been connected with building operations until 1919 when he and Mr. Angus took over the Brown-Sword Co.

The factory is situated on Station St., Belleville. The building is a modern structure and the plant comprises up-to-date and efficient machinery.

Specify Plainly the Kind of Stock

The other day a wholesaler and a retailer were found in contention over a complaint on the part of the latter because of some finish which had arrived wet. The retailer wanted it for immediate use and it wouldn't do, consequently he had to buy elsewhere, and meantime he made a claim, says the "Southern Lumberman."

The mill that shipped the lumber called for inspection. So an official inspector went through the lumber and graded it. The new grading showed some differences from the invoiced, and the mill offered only the concession of changing their invoice price according to the grade shown in the inspector's report.

A memorandum on the inspector's report furnished some evidence that the stock was wet, and then in the course of the discussion we went through the official grading rules for yellow pine and failed to find any specifications there covering any distinction between green or wet stock, or kilndried stock. To further complicate the matter, it was shown that the retailer's order had specified kilndried stock. The stock in question showed evidence of having been through a kiln, but it was not dry. And the evidence of this was plain enough that the inspector commented upon it.

Now here is seemingly an unusual situation, but it is a thing that might happen to almost any retailer any time, and it contains two or three interesting reminders which hold food for thought. One of them is that if you want dry stock and want it kilndried, this fact must be set forth specifically in your order because you will find no proviso in standard grading rules covering it. There is room here for some interesting argument as to what might or ought to be said in grading rules about the dryness of certain kinds of stock.

There is further complication in the fact that the stock showed evidence of having been through a kiln, yet plainly was not dry. So when a man specifies kilndried stock and gets stock that either has not been properly kilndried, or has become wet after drying, then what's his answer and recourse?

There is some stock like common boards and framing that it doesn't seem to matter much about being thoroughly dry. Both the retailer and the builder expect some shrinkage to take place in boards and in framing after it had been in place and becomes thoroughly dried. And usually these items are filled in quantities on the yard and have some chance to air dry. There are other items, however, like high grade finish, and flooring, which if not dry when used make a bad job because of the shrinkage which results in the course of the final drying out. Also if the stock is dressed green it will not show the clean smooth surface which should go with this class of lumber.

When a man specifies kiln dried lumber, or dry lumber of any kind, he has a right to expect dryness. And if he fails to get it he has what would seem a just claim. There is perhaps room for some argument on what constitutes dryness and what constitutes technically kilndried lumber. It may be presumed, however, that kilndried lumber means dry lumber, and the Forest Products Laboratory has done considerable research work and has established some rational tests and standards of dryness which ought to be worth something in settling points of this kind. Kilndried lumber certainly ought to be dry lumber, and when a man specifies kilndried material in his order if the stock comes in green or wet he is not getting what his order calls for, even though it may show evidence of having been through a kiln. And somewhere, somehow, something bearing on this should be set forth in grading rules and specifications.

Veteran Lumberman Conducts Modern Yard

One of the most aggressive businesses in Charlottetown, P. E. I., is that of L. M. Poole & Co., lumber dealers, of which Simon P. Paoli is the sole proprietor. He has been associated with the company for the past forty years and all the other members have in the interval passed away.

Mr. Paoli has one of the best-appointed and best kept yards in the Maritime Provinces and carries all sizes from 1x1 up to 12 x 12 in all used lengths. The firm has on hand a stock of about half a million feet and also a large supply of cedar posts, poles, shingles, lath, hardwood flooring, etc. All kinds of lumber are kept separate as to length, width and thickness and there is, therefore, no confusion in filling orders. Mr. Paoli states that he can tell at a glance how the stock in any line stands and prides himself on being able to fill orders in the shortest possible time.

The firm has three schooners carrying lumber and owns its own wharf, which is 900 feet long by 110 feet wide, with piling grounds adjacent. In the past five years the company has built a breakwater and added two acres additional to the piling ground by filling in as a dump. When all is filled in the extra area will be fully three acres. There are five drive-roads through the yards. Everything about the premises is kept in splendid order and there are suitable sheds for flooring, trim, moulding, etc., which are all kept in A1 shape. Mr. Paoli has associated with him his son, Simon P. Paoli.

Hoeing His Garden While Holocaust Raged

Three settlers in the vicinity of North Bay, Ont., have been prosecuted by Ontario forestry officials because of negligence with regard to fire and, in each case, conviction was secured before Magistrate McGaughey at North Bay when the charges were heard. In one case, Fire Ranger Garvin swore that he had found a settler calmly hoeing his garden while a fire was getting a good start in a nearby forest. The fire burned for 13 days before it could be extinguished and the services of no less than 42 men were required for fire-fighting work during that period. The accused was charged with neglecting to report the fire and a fine was imposed, with costs.

Two settlers at Widdifield were charged with setting fires without a permit. Serious damage was prevented in both of these instances but convictions were registered and fines were imposed along with costs.

The manner in which a blaze can take hold of wooded country, even in the proximity of cleared sections, is indicated in the first case mentioned. Valuable timber was being destroyed for a period of practically two weeks and 42 men were called from regular occupations to fight the menace at the ratepayer's expense.

The Curse of Carelessness

A fool there was and his pipe he lit
(Even as you and I),
On a forest trail where the leaves were fit
To become a blaze from the smallest bit
Of spark—and the fool, he furnished it
(Even as you and I)
The forest was burned to its very roots,
Even beneath the ground,
With the flowers, the birds and the poor dumb brutes.
Old hoary oaks, and the tender shoots
Which might have made logs but for such galoots,
Allowed to wander round.
The lumberjack has now passed on,
His pay-day comes no more,
And the screech-owls haunt the camp at dawn
Where the cook's tin pan woke the men of brawn;
But the mill is silent, the trees are gone,
From the soil and forest floor.
A deadly sight are those hills of rocks
Which once were beds of green;
No hope for the human, no food for the flocks;
The flood must be held by expensive locks,
While the harbor is silted to the docks—
The ships no more are seen.
But the fool smokes on in the forest still,
Leaves camp-fire burning too.
While the patient public pays the bill
And the nation's wealth is destroyed for nil.
If the law doesn't get him, the devil will—
Smoker, it's up to you!

—The Pathfinder

White Pine Menu Card at Hoo-Hoo Dinner

A score of years ago there flourished in Ontario a fraternity which is to-day very prominent in the lumber ranks across the border. It is known as the Concatanated Order of Hoo-Hoo, and is one of the most progressive social and benevolent institutions of any representative industry. The symbol of the organization is a "black cat."

In 1893 a Hoo-Hoo banquet was held at the old "Orillia House," Orillia, which was attended by a large number of forest products

men. The dinner was a great success, and, after a boat trip on Lake Couchiching, the entertainment started and the majority of the Hoo-Hoos kept up the fun until the wee sma' hours.

The menu which indicates what a jolly evening it really was, was printed on a miniature piece of white pine. In those days white pine was king and so were potent beverages, as one could then put his foot on the brass rail and sawdust and have "a wee drap of the auld kirk."

A surviving Hoo-Hoo of the pre-cafeteria, ante-bellum period of 1893, declares that the merriment was kept up until almost sunrise, and adds,—"I went to bed at four o'clock and some of the "boys" climbed over the transom and carried me downstairs in my pyjamas. It was a great night and everybody enjoyed the festivities."

The "Canada Lumberman" is indebted to Col. James Lightbody, now of the McElroy Lumber Co., Limited, Victoria, B.C., who was

recently in the East on a visit, for the accompanying copy of the bill-of-fare of the "Concat." Col. Lightbody asked a number seated near him to sign their names on the back of the unique, white pine, menu card and the signatures of most of those present are still legible. Several lumbermen, who attended the function have since passed away, but there are quite a number who still remain.

The following names appear on the card:—

Joseph Oliver, Toronto; J. W. Hunt, Port Hope; W. J. Shortreed, Port Hope; R. H. Jupp, Orillia; Joe Hadley, Chatham; W. C. Laidlaw, Toronto; Alex. Leischman, Orillia; Geo. Thompson, Longford; H. J. Bartlett, Orillia; Chas. Hadley, Chatham; Dan. Ferguson, London; C. D. TenEyck, Toronto; T. M. Birkett, Ottawa; Fred Shirley, Galt; E. J. Ryan, Collingwood; W. J. McBeth, Toronto; H. Turnbull, Sarnia; James Lightbody, Glasgow, Scotland.

Take Away Matches from Forest Visitors

The Quebec Provincial forest permit, which every visitor to the forests of the Province is required to take out before they are allowed to enter the wooded country, does not entitle a person to carry matches as a portion of personal equipment, according to the latest interpretation of the regulations imposed by the Provincial Department of Lands and Forests. Fire Rangers in the vicinity of Lac La Peche and Lac des Cinq and near the St. Maurice River are calling upon all sportsmen, guides, tourists and others to give up matches and smokes before they proceed further, even though they have the required forest permit. Because of heavy fire losses in June, the rangers throughout this section are making this stipulation until August 1, it has been announced.

New City of Longview Dedicated

Ten thousand persons assembled recently at Longview, Wash., from all parts of the Pacific Northwest and many cities of the East to pay tribute to the broad vision of The Long-Bell Lumber Company when the new city of Longview, Washington, was formally dedicated and the imposing new Hotel Monticello, one of the finest hotel plants on the coast, was officially opened. Included among the distinguished visitors were the Governor of the State of Washington, the Congressman from this District and the Mayors of Portland and Seattle.

Robert A. Long, of Kansas City, is the directing genius of this great project and as a result of his great conception and dauntless courage a city will grow on this magnificent site that seems inevitably destined to become one of the outstanding industrial communities of the entire United States.

Less than a year ago the location of the new city was a wide stretch of fertile meadow and farm lands extending westward from the Cowlitz River along the banks of the wide Columbia, an area of fifteen thousand acres overlooking probably the most important navigable streams in the United States.

Today that stretch of verdant countryside is a beehive of commercial industry teeming on every side with the complicated activities incident to the birth of a great city. Already scores of streets have been graded, many of them paved with concrete. Where a year ago corn and wheat grew in abundance or cattle peacefully grazed substantial structures, as imposing as the best buildings in the largest American cities, invite the inspection of visitors—two large bank buildings, a department store building, 120 by 150 feet, two great apartment buildings, a 200 room hotel built of brick and terra cotta, as complete in every convenience as the newest and finest hotels on the Pacific coast, a daily newspaper with an associated press franchise, two hundred and fifty model homes for housing the company's own workmen—these are but a few of the impressive evidences of the propitious start of this tremendous project.

Nothing seems to have been overlooked in developing Longview into the model community of the Pacific Coast in point of living condition and civic symmetry. The best known experts in zoning and community development co-operated in plans contemplating a city of 50,000 persons. Every possible precaution has been taken to avoid mushroom growth and to insure protection not only for home owners but for every class of business and industry. In a word everything has a place in Longview and there is a place for everything.

The giant mills of the company will be in the industrial center along the banks of the Columbia, adjoining enormous docks, which will serve boats from all parts of the world as the largest vessels can come up the river to Longview, be loaded at these docks, turn around in the broad stretch of water flowing past the mills and steam away to any of the ports of the world. There will be two great mills, each the counterpart of the other and capable of a combined annual output of 500,000,000 feet annually.

Want Change in Quebec Lien Laws

The Province of Quebec Retail Lumber Dealers' Association and the Montreal Retail Lumbermen's Association are taking steps to secure an alteration of the Quebec Lien Law which law, it is considered, does not afford retailers sufficient protection. The absence of a real protective law has resulted in substantial losses to the retail lumber trade.

These associations are acting in co-operation with the Montreal Builders' Exchange and the Builders' Supplies Credit Bureau. A meeting of the associations was held on July 17th in Montreal, the lumber dealers being represented by Messrs. G. Lebel, J. P. Dupuis, R. Emard, J. N. Forest and G. A. Thompson.

The whole question was discussed and it was decided to take action in the direction of asking the Provincial Government to introduce a Bill which will give to suppliers of material such protection as is granted to contractors, sub-contractors, architects, and labour under Statue 7—George V., Chap. 52. In the case of the contractor, the law provides that within thirty days after the termination of the work the contractor or architect must take out a registered privilege of his claim after which six months is allowed for the taking out of a writ. It is hoped to secure the co-operation of the Provincial Builders' Exchange.

Mr. Alexander was appointed chairman of the committee, with Messrs. A. Balfry and G. A. Thompson joint secretaries.

It is reported to raise a fund to carry on the work and to secure the necessary legal advice.

British Empire Foresters in Session

An important British Empire Conference on Empire Forestry is scheduled to take place in the near future at Ottawa when it is expected that reforestation will be one of the subjects treated. Lord Lovat, K. 7, K, C.M.G. D.S.O., president of the British Forestry Commission, which has a gigantic plan of reforestation in the British Isles, arrived in Canada recently with the members of the Commission and its staff of technical experts to the number of 27, to take part in the deliberations, when it is expected that some valuable papers on the forest resources of the Empire, including Canada, will be read and debated. Mr. R. L. Robinson, C.B.E., technical expert of the British Forestry Commission, with Mr. Fraser Storey, chief of the Intelligence Service, have already arrived in Canada. The personnel of the Commission also includes Professor H. S. Trout, head of the Forestry School, Oxford University; Dr. A. W. Bathwick, research officer; Lieut. Col. G. H. Courthope, president of the Forestry Association, and Dr. J. W. Munro, forest entomologist of continental repute.

From the fact that the English and Scotch forests were subject to serious depletion to supply the late war demands, the work of the British Forestry Commission is to restore as rapidly as possible the forested areas of the United Kingdom. During the war Major General Lord Lovat, chieftain of the Fraser Clan, was in charge of all British forestry operations, and associated with him were many men, including Canadians, prominent in the lumber and pulp manufacturing world.

It is expected that the questions to be considered will have an important bearing on Canadian forest resources and as delegates will be in attendance from all sections of the Empire, including Quebec, there is every possibility of good emanating from the conference.

Period of Severe Timber Shortage is Inevitable

A period of severe timber shortage in the United States is inevitable, according to the Forest Service, in an article in the 1922 Yearbook of the United States Department of Agriculture, entitled "Timber, Mine or Crop?" The evil effects of having treated the forests of this country as mines from which to extract the timber without regard for proper methods of growing new timber crops are discussed.

"American standards of living and much of our industry have been developed upon timber supplies so abundant and cheap that the United States to-day is the largest consumer of wood in the world," states the Forest Service article. "We now use nearly half the lumber, more than half the paper, and about two-fifths the wood in all forms. We produce from two-thirds to three-fourths of the naval stores. The timber to supply our demand has been mined from the forest much as coal has been mined from the ground."

The original forest lands of the country, according to the bulletin, totalled 822,000,000 acres and the stand of timber on that original area is conservatively estimated at 5,200 billion board feet, probably having been far more. To-day the forest land area is but 470,000,000 acres and the timber stand is reckoned at 1,600 billion feet of virgin timber and 600 billion feet additional of culled and second-growth stands.

The rate of timber consumption in the United States, including

loss by fire and other destructive agencies, is nearly four times as great as the rate of timber growth, it is also stated, the country's requirements amounting to about 23 billion cubic feet each year while but approximately 6 billion cubic feet is being grown. Although timber is growing on perhaps 250,000,000 acres of our forest land, the crop is so poor and so subject to damage that the land is producing but a small part of what it could produce under forest management.

However, according to the data contained in the article, if the entire forest area of the country—470,000,000 acres—were placed under intensive forestry about 27 billion cubic feet could ultimately be produced each year. This amount would exceed the present drain on our forests by a relatively small margin.

"This production, however, can not be brought about in a short time," continues the article. "To make the practice of intensive forestry universal or even the rule throughout the United States will be possible only through gradual progress. It will require the development of scientific knowledge and technical methods of timber growing comparable with what has slowly and at large cost been obtained for agricultural crops.

"It will require effective protection against fires. It will require methods of cutting the mature timber that assure prompt and complete reforestation. It will require the selection of concentration of growth on the best species in each region. It will require cultural operations, such as thinnings, which in European countries yield, and in this country may be expected to yield, a revenue from forest land before the main crop reaches maturity. It will require a cut so regulated that only the mature timber will be taken, and no more than the total growth of the whole forest.

"Even if intensive forest management could be applied instantly to the entire area of forest land in the United States, it would take a generation or two to bring about forest conditions as favorable to high production as those now to be found on small areas in this country or over large areas under forest management in Europe.

"Further, since the timber crop requires several decades to grow to maturity, though a full stand of the right kinds of trees could be started on all our forest land by some magic overnight, it would be 30 years at least before new growth would, under average conditions, attain sufficient size to furnish even low-grade material.

Canada Cannot Afford Heavy Fire Losses

The Dominion of Canada has been facing losses in forest fires which can no longer be safely borne with equanimity. Day after day reports are read of the sweeping of large tracts of timber land by flames, and it is reported all too frequently that some busy community has been wiped out along with a forest says Dr. P. E. Doolittle, President of the Canadian Automobile Association.

Canada cannot afford heavy losses in her natural forest resources through carelessness, and, therefore, I am making this appeal to the tens of thousands of organized automobile enthusiasts who are linked up with the Canadian Automobile Association through affiliated leagues and clubs, and to all motorists generally, to do everything possible to prevent the destruction of a forest fire. Every forest throughout Canada is a tangible pay-envelope for Canadian workmen and widespread burning of timber constitutes disturbance for industrial employment and economic conditions.

Motorists should never leave a campfire burning, throw a lighted match into the brush or build a larger fire than is necessary for current needs. Motorists who appreciate scenic beauty should do everything to conserve the glories of Nature for those who come afterwards.

Eastern Woodworking Plant is Kept Busy

The Halliday Co., Hamilton, Ont., some two years ago opened a branch in Truro, N. S., and under the management of W.H. Faltenhine a good business has been developed. C. L. Smith is the superintendent of the plant. The company turn out flooring, doors, sash,

in fact all woodwork required for the building of a house, and have a railway siding right into their storage sheds.

Port Elgin Firm Improves Plant

J. & C. Hickman, of Port Elgin, N. B., have recently made an extension to and improved the facilities of their sawmill and wood-working plant by adding a 6-inch resaw and double surfacer. Their cut this season will be about two and a half million feet which is somewhat less than last year, owing to the excessive fall of snow during the past winter hampering logging operations.

The firm report that the prospects are good for the future as they expect the Gaspereaux River to be dredged so that vessels up to 13 feet draft may be able to come up to their mill wharf to load.

Shook Mills are Running to Capacity

The Pembroke Shook Mills, of which J. T. Stuart is general manager, are very busy at the present time and running to capacity. From present indications the firm say it looks as if the plant will continue actively for the balance of the year. Considerable logging will be done during the coming winter as it is the intention of the company to take out in the neighborhood of 15,000,000 feet.

Lumber Business is Good in Sudbury

The Laberge Lumber Co., Limited, of Sudbury, Ont., have sold their limit to the Acme Timber & Tie Co. and their sawmill to a firm in New Brunswick. The Laberge Co. are operating their wood-working plant at Sudbury at full capacity and expect to be busy for several months yet unless business should take a sharp turn. Ex. Mayor J. A. Laberge, who is secretary-treasurer of the organization, says that the opening of the nickle mines in the Sudbury district has been a great help to retail lumber yards in that vicinity.

Cut Will be Larger This Season

Murray Crawford, Limited, of Campbellville, Ont., state that their output of lumber this year will be about 20 per cent. larger than last season. The firm cut most of their logs on their own limits, and last winter the farmers brought in for sale a larger quantity of logs than for many years. The demand for the higher grades of hardwoods seems keener than for the last two years with prices considerably larger. Lower grades are just the reverse. E. D. Mahon, secretary-treasurer of the company, says that their output of softwoods while never large, is bigger this season than for some time past. Prices are very fair. The company are planning for about the same cut next season as this.

Where Settlers Became Fire Rangers

During 1922, the Department of Lands and Forests utilized 332 assistant fire rangers to improve the protective system in settlers' districts. These assistant fire rangers are selected in each range, among the most progressive settlers. They have the authority to issue permits to burn clearances and also to enforce the law, which requires each settler to watch the progress of his fires. They can also summon help and direct the fight against fires which may escape the settler or occur in the vicinity of their beat. This system of assistant fire rangers has become very popular, because it enables the settler to obtain a permit at any time, provided he has complied with the obligations of the permit, that is, if he has piled the debris of his clearing into heaps or rows and if he has cleared a strip of at least 50 feet between such heaps or rows and the adjoining forest. Of course the weather conditions must be favorable and there must not be any drought. The settler appreciates very much the fact that he is no longer obliged to make ten to fifteen miles to the ranger's home, with the chances of finding him away. The moral effect is also great, as the assistant forest ranger residing among the settlers causes them to be more careful; they discuss between themselves the danger arising from the imprudence of careless people and we find that, in many sections, the settlers are co-operating together to the extent that they will all burn at the same time so all the available men are in readiness; therefore, the old "Bee" system is coming back; this means that, with the hearty co-operation of all the interested, clearances are being burned and very little damage caused.

Empire Forestry Conference in Progress

Leading delegates have arrived in Ottawa from the various dominions and possessions to attend the British Empire Forestry Conference. Among them are Major-General Lord Lovat, chairman of the British Forestry Commission, together with other members of the commission and of the English Forestry Society and the British Empire Forestry Association. Ceylon, the Straights Settlements, Nigeria and British Guiana, Australia, New Zealand, South Africa and India are also represented.

It is the aim of the conference to find means of making the British Empire self-sustaining in its timber supply, and the conference will take stock of the Empire's timber resources and discuss means for conservation and reforestation. Following the official opening which took place in Ottawa on July 25th, the delegates are making a tour of inspection of forest country in Quebec, New Brunswick and Nova Scotia.

Business meetings will be held in Ottawa during the week of August 6 to 11. The conference will then make a western tour through Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. Concluding sessions are to be held in Victoria, B.C.

Payette Co. Busy on New Equipment

J. T. Payette, proprietor of the P. Payette Co., Penetanguishene, Ont., manufacturers of sawmill and marine machinery, who have been established since 1860, states that from last fall up to the present their plant has turned out more work than it ever did in the busiest days of the war time.

The P. Payette Co. have work on lath mills, bolters, picket machinery and sawmill carriages, which will keep them going steadily until the end of the year. The outlook for continued good business, Mr. Payette says, is most promising.

Started Late But Going Strong

The lumber mill owned by J. A. Gregory at Ketepec, commenced sawing operations on June 18 and will continue until the end of the season. Mr. Gregory also has mills at Grand Bay and West St. John which are also operating full time. He has a large stock of pine, spruce and fir logs on hand to be manufactured for the English and American markets. He is also manufacturing laths despite the fact that the demand at present has fallen off. The delay in starting the mills this year was occasioned by the damage caused by high spring freshets.

The Best Friend of Man

A man's job is his best friend. It clothes and feeds his wife and children, pays the rent, and supplies them with the wherewithal to develop and become cultivated. The least a man can do in return is to love his job. A man's job is grateful. It is like a little garden that thrives on love. It will one day flower into fruit worth while, for him and his to enjoy. If you ask any successful man the reason for his making good, he will tell you that first and foremost it is because he likes his work; indeed, he loves it. His whole heart and soul are wrapped up in it. His whole physical and mental energies are focused on it. He walks his work, he talks his work; he is entirely inseparable from his work, and that is the way every man worth his salt ought to be if he wants to make of his work what it should be, and make himself what he wants to be.

Forest Fast Disappearing

Canadians are due for a rude awakening, says a bulletin issued recently by the Natural Resources Branch of the Department of the Interior, Ottawa, in commenting on the condition of the forests of Canada. They have always had the impression that their forests are inexhaustible, that the trees were growing more rapidly than they could possibly be used. This is not the case. It is carefully estimated by experienced foresters that for every tree used for industrial purposes, from fifteen to twenty are destroyed by forest fires.

Logging Superintendent and His Job

When—with the saw mill sawing to capacity; only one shift in the pond; one to five feet of snow to plow every few days during three winter months—your railroad tracks sink out of sight when the snow melts and yet not a saw lays off for the want of logs—you turn into the hay every night feeling as though you had won a new lease on life for at least another day. Sometimes a climax arises and you either gain on the mill or receive a setback that is almost a knockout. It might be this: your best skidder turns over a soft piece of track and you have no spare rig to take its place. Will the mill slow down or can you get the skidder working in time to save the day. Herculean efforts are required working and planning night and day. The ability to overcome these obstacles make a present day logging superintendent.

LUMBER TRADE CONDITIONS

Montreal Trade Continues in Fair Volume

There is no appreciable change to report in the Montreal market. A fair amount of business is passing with a slighter volume of orders for American account. The prices of softwoods are about maintained, the general opinion being that there will be little, if any, decline during the balance of the year. The prospects indeed are for steady markets with a satisfactory demand.

The local retailers are doing a good trade under the stimulus of the activity in building which, judging from recent permits, shows no sign of letting up. Retailers, however, are not inclined to buy beyond immediate requirements, and are also showing a more conservative attitude in extending credit. Through the Retailers' Association they are getting more detailed information as to the financial standing of contractors and others and are taking other measures to stop leaks which have resulted in losses to the yards.

The trade in B. C. forest products is moderate. Another vessel, the "Margaret Coughlan," has arrived in the port from Vancouver, via the Panama Canal, with a very large cargo of B. C. fir. This trade is being steadily developed here by Knox Bros., Limited.

A lumberman who has just made an extended visit to the Abitibi district, states that the cut there this season shows an appreciable reduction. Operators generally produce considerable quantities of pulpwood, but this year the amount is on a smaller scale, the mills manufacturing lath in preference to pulpwood. All the plants are very busy shipping lumber. The owners state that they propose to increase their woods operations next season and will take a considerably larger cut.

The sash and door manufacturers have a good many orders in hand and the box plants are fairly busy. Comparatively little lumber is being shipped to the U. S. So far the season has been slow although the lower ports are showing more activity.

St. John Looks for Good Fall Business

Despite the fact that conditions in the lumber trade in St. John are quiet prices remain firm and from all indications producers are satisfied that by the time they have their logs manufactured the demand will be satisfactory.

The prices, which are quoted by one of the leading manufacturers, show that 2 x 3, 2 x 4, 3 x 3, and 3 x 4 for rough merchantable spruce is now \$30, while for the same sizes, dressed on one edge the price is \$31.00. Sizes 2 x 6, and 2 x 7 are still holding at \$33.00, while 4 x 4, 4 x 6 all rough, are selling for \$34.00.

The price of laths is quoted at \$6.50, but demand has fallen off and even at that price they are not finding many buyers. Shingles are still holding the same prices as previously quoted and the demand is fair. The call has been strong and from present indications will continue to be so.

Some shipments of various sizes have been made recently to England and the hope is expressed that the market there will hold.

Exports for the Miramichi district of the province of New Brunswick show a marked increase during the first six months of the year.

The following is a list of the lumber shipments and their value:—

Hemlock bark	429 cords	\$ 9,870.00
Pulpwood, peeled and rossed	7,428 cords	98,894.00
Hemlock, planed and rough	1,207 m.s. ft.	31,159.00
Pine, planed and rough	2,264 m.s. ft.	68,342.00
Spruce planed	9,075 m.s. ft.	247,489.00
Spruce rough	9,508 m.s. ft.	242,531.00
Laths	17,043 M.	102,690.00
Wood pulp	2,450 tons	153,944.00

Business in Ontario is Seasonably Active

Conditions in the lumber line have not altered materially during the past two or three weeks and business continues to be very fair in different sections of Ontario. Retail trade is improving with the advent of a bumper crop and more repair work and general improvements are being carried out. The demand from across the line keeps up well and large shipments of white and red pine are being forwarded to eastern points. Prices remain firm and while there may have been a slight weakening in a few isolated lines, values on the whole are well maintained.

There is not a great deal of stock changing hands at this season

of the year but quite a number of firms are busy on shipments. Those millmen, who have not sold, are holding their lumber believing that they will get the prices that they are asking. There is every indication that conditions in the lumber line this fall will be good. The decline in purchasing came at a time before a run-away market developed. The lull has pretty well passed and affairs are now on a steady basis.

One feature of the market, which must not be overlooked is that costs of production are climbing all the while. Labor is quite scarce at some points and men are rather restless. One big logging operator stated that he would expect to have to pay men for the camps more this coming winter than he did last and there was a disposition for help at this season to leave for the western harvest fields and create a shortage at the mill which had to be bridged over. Labor was rather unsatisfactory from various angles and not at all efficient.

In hardwoods, there is considerable buying reported by leading wholesalers who state that 90 to 95 per cent of the product is shipped across the border. Specialty plants, factories making trim, furniture firms and others over the line are using more Canadian birch and the number of inquiries is gradually increasing. One leading distributor of hardwoods stated that collections on the home market have not been any too good and that he was not engaged in the "banking business" and, therefore, preferred to dispose of his stock where he was assured of prompt settlement. He felt, however, that industrial conditions would greatly improve in Canada within the next few weeks and the outlook for autumnal activity was promising.

On the whole conditions in the lumber line are much better than they were a year ago. Lath are holding firm in price and there is a steady demand, but B. C. red cedar shingles are rather spasmodic. There is no fixed price and quotations vary from week to week. However, it is believed that conditions will soon become firmer and everything will shape up for bigger and better business during the fall months.

In the meantime the whole world has the holiday spirit and no one can draw either a mental or moral picture of unusual activity in the torrid temperature that generally is associated with the month of August.

Quebec Shippers Report Little Demand

The lumber trade in general in connection with the city and district of Quebec is still holding out good. The export of timber and deals from the port continued brisk up to the middle of July when eight ocean steamers called and loaded with part cargoes, the principal shippers being the firms of W. & J. Sharples Co., Limited, and John Burstall Co., with the Louise Lumber Co. a good third. The unusually good export shipments are expected to last until the end of the month when all orders booked by the Quebec export firms during last winter and spring will have been shipped.

In the meantime there is very little new demand. Inquiries are slow and scarce and this is attributed by the British agents of Quebec lumber firms to the continued obscurity of the European political situation. Continental exchanges are becoming more erratic and will continue in this state of uncertainty until there is a real settlement of the reparations dispute.

Students of politics and European economics are of the opinion that the reparations settlement is drawing nearer. They claim that a settlement is imperative to arrest an economic collapse of Germany which would engulf the whole of Europe in a whirlpool of difficulties which would take more than a generation to overcome. This threatened cataclysm has been followed and understood by the government and economic interests of Great Britain, and even France and Belgium, with the result that a determined effort is now on the tapis to come together and end the situation and England taking the initiative.

The building interests of Great Britain have, no doubt, brought a pressure to bear upon the Government, a knowledge in the possession of the mercantile and industrial interests of the United Kingdom, including the British importers engaged in the timber and lumber trade.

Experienced agents of the Quebec lumber firms who have their vision constantly focussed on every trend of the political and economic horizon of the European situation which controls the markets in supply and demand in their respective confidential reports, point

“On Time” Delivery

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

Lumber Trade Conditions

(Continued from page 57)

out this phase of conditions. At the same time they feel optimistic that a change is due in the situation which may mature into a realization sooner than anticipated by the firms and the determined stand recently taken by the British Government without prejudice to cordial relations with their allies, the French and Belgians. The reports go on to state that while general trade conditions in the British Isles are good, the English importers entertain different views. In the beginning of the present year, November and December last, a few of the importers purchased heavily, some moderately and some not at all. As prices showed a tendency to rise importers in some districts took a plunge but there was always a minority who, obsessed with the idea of a prospective slump, feared that the risk of buying was too great and later realized their mistake by loss of business. All agents of Canadian lumber firms tell the same story. They find that their customers are simply not buying, while those who have bought, are pleased to have done so and to see the prices of wood keeping firm.

Very few English importers desire to see a fall in prices. Such a large quantity of wood has been bought from the continental exporters that a change in the position and a falling market would create trouble for trade. English importers, however, feel that they have gone the limit in paying figures of March and April, not only for their immediate profits and in order to avoid a reaction, a halt should be called.

Shippers relying on the British market and the consumption in the British Isles, must understand that the consumption is only moderate. Besides, in the present state of international politics and rates of exchange, trade with other European countries, handicapping English selling interests, are most uncertain. The Canadian trade should also bear in mind that the competition from Scandinavian wood export centres, and now Soviet Russia is an essential thing to be reckoned with. From the latter country cheap wood is being exported to obtain the money, and a trade agreement between Russia and England must be seriously considered.

Good Business Outlook for Fall Months

In most lines of trade the present period is rather quiet and the midsummer lull is on. Many heads of firms and members of staffs are taking a holiday and enjoying a respite from the busy grind. The question forming the chief hot-weather topic is how will business be this fall? What kind of trade will be done in the lumber line and what is the general outlook? The feeling generally seems to be optimistic in view of the abundant crops and favorable reports coming to hand from the west.

One leading authority states that merchants have for some time been buying cautiously and their stocks of merchandise are not excessive. The conservation, which has prevailed, should help to steady matters and prospects on the whole are very good. Naturally a certain amount of hesitation may be expected in July and August, but during the fall, indications point to a total perhaps 10 per cent ahead of the same period last year.

Babson, in a recent summing up of the situation, said,—"Looking ahead, therefore, we do not fear any serious backing up of goods in the hands of retailers throughout this year. The conservative policy of the retail merchants curbed the business boom last spring but it will make possible a continuance of good business in the latter part of 1923. In the last analysis the retail trade determines general business activity. The retailers are the neck in the bottle. Fully 85 per cent of all the products of the farm, the forest, the mine and the factory pass through their hands to the ultimate consumer. As long, therefore as the retail merchants buy only as much as they can sell, there is little danger of over-expansion in other fields of business. The greatest crises have only come when retail stocks were excessive and began to back up. This happened in 1920 and in all other drastic declines in business history."

Moderate Demand for Canadian Woods

In a recent letter from Liverpool, Eng., sent out by Farnworth & Jardine, an interesting review of the market so far as Canadian woods are affected is given.

The summary is as follows:

Imports with few exceptions were moderate. Softwoods were in steady request with firm prices. Stocks are not heavy. Hardwoods generally rather quiet without any material change in the market.

Canadian Woods.—Quebec, etc., Yellow Pine Timber.—There was a slight improvement in demand, but generally business was very quiet. Stocks moderate.

Waney Pine.—First Class.—The import of 28,000 cubic feet was

practically all to Manchester. Deliveries were slightly above recent months, but the demand was disappointing, and stocks appear sufficient, although not heavy. Second-Class.—In limited request with ample stocks. Square Pine, Red Pine.—No call for this variety.

Oak.—No arrivals, small consumption. Stocks evenly distributed between Liverpool and Manchester amounting to 44,000 cubic feet.

Elm.—The import consisted of 5,000 cubic feet Square to Manchester, and 1,000 cubic feet Round to Liverpool. Deliveries were small, but stocks are low. Fresh large wood is in request.

Pine Deals.—A fairly substantial import came to both Manchester and Liverpool. Deliveries were steady, leaving stocks fairly moderate.

Spruce.—A small quantity arrived by Liner, and was taken care of by the deliveries. Stocks are low. Values are on a high basis, with the result forward business was difficult to arrange.

New Brunswick and Nova Scotia Spruce and Pine Deals, etc.—The Mersey (including the Manchester Canal) received an import of 2,150 Standards, mostly arriving towards the end of the month, and still on the quay. The deliveries from stock, amount to 3,000 Standards, resulting in stocks being reduced to 6,450 Standards, compared with 7,630 Standards at the end of June, 1922. The stock in Manchester is extremely low, but arrivals are shortly expected. The present situation is relieved by substantial stocks of Baltic and Central European Whitewoods. Values are without change. Ocean tonnage was to be had at reduced rates, compared with the previous month.

Pine Deals.—Quiet market, with stocks very low.

Birch.—Logs.—About 19,000 cubic feet came to hand, mostly to Liverpool, of which a fair proportion went into consumption. Stocks in the aggregate appear quite sufficient. Those in Manchester are on the low side.

Planks.—The arrivals amounted to 38,000 cubic feet, of which 28,000 cubic feet went into consumption. Stocks are heavy, viz., 187,000 cubic feet. The market ruled dull. Values were easier.

Quebec Shipments Across Border Keep Up

The lumber trade for Quebec mills with the United States market is still brisk and the railroad transportation to meet the exigencies of supply is giving satisfaction. The halt in the building trade brought about in the month of May, by financial pressure on account of the abnormal demands for labor, has not, in the least, affected the demand from the American market insofar as Quebec business with its American customers is concerned. All Quebec shippers of lumber to the American market give out the same statement that there has been no let-up in the demand. It is expected that the boom in construction work across the border has only been given a temporary set-back on account of the increased cost of labor which is calculated to right itself in the fall when the building boom will be continued. The St. Pacome Lumber Co. is still carrying on a large shipping trade to meet the demands of the firm's American customers.

Roch Julien, president of the firm of Julien & Julien, with mills in the counties of Champlain and Megantic, P.Q., reports business favorable. Besides shipping lumber to Ontario and the United States, this firm exports to the United Kingdom market, through the Montreal brokerage firm of E. H. Lemay. Julien & Julien are also large shippers of pulpwood to the American pulp and paper mills. This season the firm has turned out from their mills, 4,000,000 feet of lumber which have been sold, and are now working on orders for 3,000,000 feet b.m. of planks. The St. Lawrence Lumber Co. and the D'Auteuil Lumber Co., firms that deal largely in the export of pulpwood, ties and shingles, also report good business.

The export firm of H. R. Goodday Co., who generally ship timber and lumber from the ports of Miramichi and St. John, N.B., report a quiet business this season, and with the exception of vessels carrying part cargoes, the firm was loading a steamer with a full cargo of timber and deals for the United Kingdom at the port of St. John, N.B.

The Quebec pulpwood dealers, who ship largely to the United States, have organized an association to protect their interests and combat the embargo which they fear will greatly curtail their business. Some of the more prominent dealers accept the proposition philosophically, and say when the embargo is in force it will be a law that must be respected and lived up to. They feel, however, that the government will not impose the embargo this year which will give them time and opportunity to arrange their business to meet new conditions.

One of the Quebec pulpwood brokers spoken to, said, he knew that the Government was acting within its rights to protect the Canadian forest resources as there were many abuses in connection with the cutting and exportation of pulpwood that was not generally known. Discussing this phase of the question the broker said,—"I

Save Money on Your Camp Supplies

Take advantage of our special prices on supplies, and you'll save money without sacrificing quality. We have many years experience in provisioning lumber and construction camps, and offer you an unexcelled service. All supplies are strictly fresh and reach you in perfect condition. Let us have your enquiries for tea, coffee, rice, prunes, pickles, raisins, molasses, sugar, beans, peas, canned goods, etc.

will give you an instance as to how pulpwood is cut from Crown Lands and shipped to the United States in contravention of the pulpwood embargo. Farmers, with land adjacent to Crown Lands, obtain permits to cut wood from the government-owned property which they have made into pulpwood, and sold to the brokers for export. I have on file over a dozen such permits which we keep for protection. The modus operandi of the farmer is to seek permits to cut pulpwood from the government and then sell it to the city brokers for export. For instance, a farmer or new colonist will come to us with an offer of 100 cords of pulpwood for sale. Aware of the extent of the wood on his land, we ask him how the thing is possible when he has not that amount on his land to cut. Then the farmer makes the announcement that he has secured a permit from the Department to cut wood from the adjoining government land, at the same time exhibiting the permit, and should we decide to buy from him, we secure the permit for our own protection.

The foregoing statement was made to the Quebec correspondent of the "Canada Lumberman" from a reliable pulpwood shipper and goes to show that there are abuses practised in the cutting and sale of pulpwood, of which the Quebec Lands and Forests authorities are not aware but are nevertheless responsible for.

There is no doubt but that the pulpwood embargo question will be made a platform issue at the next general federal election and that every effort will be made to embitter the rural voters against the government. It may be recalled in this respect that a hue and cry was raised against the former Government, when Sir Lomer Gouin imposed the embargo on the export of pulpwood from government-owned lands, a law which is to-day recognized as one of the best in the province.

Lumber Movement Gaining Across Border

The lumber movement of the country for the past week as reflected by reports from 403 of the larger commercial sawmills, to the National Lumber Manufacturers Association here, gained materially over that of the preceding week and is even much larger than for the corresponding week of 1922. For the reporting mills as a whole shipments were 89 per cent. and orders 80 per cent. of current production. The corresponding percentages for Southern Pine mills by themselves were 94 and 81 per cent respectively and for the West Coast fir mills 105 and 111 per cent. Of the reporting mills 364 have an established figure of normal production for the week, according to which actual production was 98 per cent., shipments 90 and orders 83 per cent.

The 134 reporting mills of the Southern Pine Association give their unfilled orders as 233,062,050 as compared with 242,493,030 feet for the preceding week; and the 131 reporting mills of the West Coast Lumbermen's Association give their orders as 349,761,933 feet, as against 316,284,089, the two groups together showing an increase of 24,046,864 in unfilled orders over the preceding week.

Construction is Following Normal Trend

According to reports tabulated by the Dominion Bureau of Statistics, there was a decline of 23.6 per cent. in the value of the building permits issued in June as compared with May. This seasonal decrease is often experienced during June, the largest aggregate of permits granted usually occurring in April or May, when the building season is commencing. The comparison with June, 1922, also shows less projected activity during the month under review, there being a reduction of 15.9 per cent. Statements received from 56 cities showed that they had authorized building to the value of \$14,345,573, whereas in May, 1923, the total had been \$18,766,065, and in June, 1922, \$17,052,582.

Detailed returns were furnished by 49 cities, which issued over 1,500 permits for dwellings at a total valuation of approximately \$7,600,000, and for some 3,600 other buildings estimated to cost nearly \$5,800,000. Since the erection of several houses, apartments, stores, etc., is very frequently authorized by one permit, the number of buildings to be put up would be somewhat larger.

All Provinces except Prince Edward Island, Nova Scotia and New Brunswick registered declines in the value of prospective building as compared with the preceding month. The increase in Nova Scotia of \$70,543, or 91.8 per cent., was the largest, while of the declines recorded elsewhere that in Ontario of \$3,136,195 or 28 per cent., was the most pronounced. Alberta, with a percentage decline of 40.4, however, showed the greatest proportional loss.

Only Quebec and Prince Edward Island recorded increases in the value of the permits issued as compared with June, 1922, there being percentage gains of 12.1 and 93.8 respectively in those provinces. Of the decreases indicated in the remaining districts, that of \$1,176,166, or 12.7 per cent., in Ontario, was the largest actual de-

cline, while Nova Scotia, with a loss of \$193,528, or 56.8 per cent., registered the greatest percentage reduction.

All of the four largest cities—Montreal, Toronto, Winnipeg and Vancouver—reported less contemplated building as compared with May, 1923, and with June, 1922. The only increases in both comparisons were indicated in St. John, Quebec, Three Rivers, Brantford, Chatham, London, St. Thomas and New Westminster.

Are Seeking to Assess Income Tax

The British Inland Department authorities are endeavoring to assess an income tax on the profits made by foreign producers and manufacturers who sell raw or partly manufactured goods in England through English agents and brokers. This question is not new. The Department has for some years been seeking to render the agents in various trades liable for assessment on behalf of their foreign principals, but the question has entered a new phase as the Inland Revenue authorities are now trying to assess bona fide firms or agents and brokers, who do not act as agents of any one principal but whose business is to act for any shippers in England who desire their services. It is pointed out that the assessment of taxation on behalf of shippers would, undoubtedly, create a great disturbance in the business of agents and brokers; and would contribute to the killing of British trade. If these assessments are persisted in a test case will be fought as the import would have a far-reaching effect on the timber trade in Canada and the European continental countries. It would also increase the price on timber and other wood sold abroad and shipped to England.

The Department of Inland Revenue has already assessed two of the great firms of London in respect of profits made by some foreign firms in the timber and woodpulp trade, and is looking to the London agents for the income tax upon these profits for the past three years.

In a desultory manner the struggle by the Inland Revenue Department to enforce this income tax, has been waged for some years and has been carried to the House of Lords.

How Lumber Prices Keep Going Up

The recent rapid increase in the cost of lumber is shown by the record of wholesale prices extending over various periods since 1840. The wholesale price of lumber from 1840 to 1860 was \$10.50 a thousand feet. Between 1866 and 1900 it was \$16. Between 1900 and 1914, \$25 and in 1920, \$75. Freights increased 100 per cent. and wholesale prices 200 per cent. since 1915. This inflation is due to many reasons, chiefly to the exhaustion of supply which has resulted in long hauls and expensive operations in regions difficult of access, says a bulletin recently issued by the N. Y. State College of Forestry, Syracuse University.

Timber was first taken from localities nearest the markets. As that source was exhausted the transportation distances became longer and the timber regions were confined, in many cases, to a more rugged country so the cost of production has been forced higher and higher.

This is strikingly shown by the way lumber outstripped all other commodity prices in the purchasing power of the dollar. Before the Civil War the increase of lumber prices kept on an even basis with the average increase of other commodities, but after that lumber prices jumped.

The difference between lumber and other commodities for the period between 1870 to 1900 averaged about 70 per cent. higher for lumber. After the Eastern pine had been exhausted, values of lumber over all commodities had increased 140 per cent. The dollar of 1915 purchased about as much of all commodities as it did in 1840 but it required \$2.34 in 1915 to purchase as much lumber as did one dollar in 1840 and lumber that could be purchased in 1840 for \$100 cost \$510 in 1921 while according to the investigations of E. H. Clapp of the U. S. Forest Service, all commodities which cost \$100 in 1840 could be bought for about \$143 in 1921.

The rapid increase in the cost of wood to consumers is bound to continue because nothing is being done to adequately relieve the situation, and it will be a long time after remedial measures are initiated before relief will be felt. No business activity can be carried on without being affected directly or indirectly by the price of wood. Lumber is therefore an important factor in the cost of living and as long as we are willing to remain inactive in reforestation on a large scale the longer and more severe will be the drain on the pocketbooks of the people.

Boxboard Products, Limited, London, Ont., is a new concern recently organized to take over the Security Egg Case Filler Company of Canada and to manufacture and deal in all kinds of boxes and cartons. Capital \$150,000. W. R. Nickle and R. D. White, both of London, are two of the incorporators.

Linn Logging Tractor at the forwarding skidways of the St. Maurice Paper Company Limited, near St. Donat de Montcalm, Quebec

LINN LOGGING TRACTOR

The St. Maurice Paper Company Limited was the first user of Linn Logging Tractors in Canada—they now operate two Linn Logging Tractors.

The Linn Logging Tractor is the most powerful hauling mechanism in use in the woods for log-hauling. It has not by any means the largest motor used, but through its exclusive ability to obtain perfect traction under all conditions, it is able to haul by far the largest loads—and as far as low operating costs are concerned, there is nothing that can compare with it.

Austin & Nicholson Limited of Chapleau, Ont., last winter hauled with their Linn Logging Tractor, a load weighing 250 tons—and they hauled it a distance of nearly six miles (four miles of the six being a dead lug up a continuous grade of 4%) and it required only one hour and ten minutes to make the trip.

The Linn Logging Tractor enjoys its widespread popularity among Lumbermen because of the service it produces.

Almost as many Linn Logging Tractors have been sold so far this year in Canada, as we sold during the entire year of 1922.

This is the Ninth of a series of photographs taken last winter, of Linn Logging Tractors in operation by Lumbermen and Pulp Companies in the various parts of Ontario and Quebec—the tenth will appear in the August Fifteenth issue of this magazine.

Quebec Pulpwood Dealers See Premier

A number of pulpwood merchants from Quebec were in Ottawa recently interviewing the Right Hon. Mackenzie King, Premier of Canada, Hon. H. S. Beland and other ministers on the question of the proposed embargo on the exportation of pulpwood from private lands. The deputation on their return expressed complete satisfaction with the results of their visit. The members placed before Premier King and his colleagues their requests and although they are not prepared to state the exact nature of the reply they received, the Quebec men are, apparently, assured that their holdings will be looked after. The message which the delegation transmitted to other members has caused quite a relief because, up to the present time, the dealers of Quebec City and district were at a loss to know what to do in view of the fact that at any moment they might have to cancel their shipments of pulpwood to the United States.

Word received from Quebec is to the effect that it is apparent that the Government has no intention of enforcing an embargo at the present time, in view of the fact that the bill has met with opposition from various sources. One of these protests is that the measure does not contain a clause giving the dealers time to dispose of their present stocks or to make arrangements for the future. The opinion is expressed by members of the Quebec delegation that the appointment of a Commission to enquire into the question and the fact that certain stipulations are not definitely set forth as yet that the embargo will not come into effect for a long time.

It may be pointed out that Quebec merchants fully realize that something must be done to conserve the pulpwood resources of the country and they are in favor of the principle of the bill. The proviso they make is that they be given time to adjust their business to meet new conditions.

The delegation which journeyed to Ottawa from Quebec was composed of J. O. Auger; Louis St. Laurent; A. Tardiff, Gordon McLeod; E. H. Pennington; Ernest Amyot and J. A. Coulombe.

How Paper Co. Assists in Fire Protection

When so much of the wealth of the country is depleted annually through forest fires it is gratifying to note that the Abitibi Power and Paper Company, Ltd., has had an efficient fire service in operation all Spring and Summer, and other companies will no doubt follow suit in that respect. The company's woodmen supplement the Government's fire service throughout the limits, and especially along the railroad tracks, where the danger of fire is greatest. The company's fire rangers, in fact, are under strict written orders to take their instructions from the Government rangers in case a fire breaks out and supply them with all available equipment. In such an event the two company rangers, the pumps, tanks and all other appliances would be automatically under the orders of the Government rangers in charge. Among the company's precautions against fire is a tank car with a capacity of 7,000 gallons and 2,000 feet of hose. There is also a pump with a capacity of 55 gallons per minute that goes along the line up and down on each trip. Two additional pumps and hose can be loaded on a speeder and sent to any place on the line. From a lookout tower fifty feet high, situated on the top of a rocky hill, a view can be secured of the surrounding country in every direction for a distance of twenty miles. A pair of the very finest field glasses is at this point for the use of the rangers. Both of the company's rangers carry chemical fire extinguishers on their cars. Large signs in French and English at various points warn sojourners of the dangers of fire and how to avoid such a contingency.

More About Proposed Pulpwood Embargo

American paper manufacturers, particularly those making newsprint, are much disturbed at the possibility of an embargo by Canada on the export of pulpwood, this power being conferred on the Government by legislation passed at the last session. The prohibition can be put into force by an Order-in-Council.

It is almost certain that before definite action is taken, the Government will appoint a commission to inquire into the whole matter,

and that evidence will be heard for and against an embargo on pulpwood cut on private lands. In the opinion of Mr. Barnjum there is no need for such an inquiry as all the facts are known and he has denounced the Government in strong terms for this lack of courage as he would call it, in not at once putting an embargo in force.

The American mill owners naturally object to their supply of raw material from Canada being curtailed, for that would be the effect of any legislation. Assurance has been given that the Government will allow settlers and farmers to still export their pulpwood. Those Americans who will be effected are putting their case as high as possible. They are making a strong fight, and are clearly engaged in a publicity campaign in order to influence their own Government. It is asserted that the entire paper and printing industries would be severely affected, that many mills would be forced to shut down and that the prices of pulpwood and paper would have a sharp rise. An embargo, it is also declared, is a blow aimed at the American paper manufacturer, and that it is designed to place Canada in a still more commanding position in the newsprint field, in fact it is contended that Canada wants to monopolize the paper industry of the continent. A committee, known as the committee for the perpetuation of the paper industry in the United States, has been formed in New York to look after the interests of the American mills, and representatives have been made to the American Government to bring diplomatic pressure on our Government with a view to block an embargo, failing which there is talk of retaliatory measures. The American manufacturers assert that the effect of an embargo would be disastrous to their interests.

There can be no doubt that legislation would seriously hit some of the American mills, especially those wholly or mainly dependent upon Canadian pulpwood. Mr. P. T. Dodge, the president of the International Paper Co., has for a long time advocated a tax on Canadian newsprint, and at the same time desires free access to Canadian pulpwood. He wants to shut Canada out of the States, so far as the manufactured article is concerned, while denuding this country of the absolutely essential product for the finished paper.

Judging from the results which followed the prohibition of the export of wood from Crown lands, it is more than probable that more American mills would be forced to come to Canada in the event of the prohibition of the export of wood from private lands, thus giving employment to our own people. The view of those who have been agitating for this legislation is that, in the first place, there is an urgent necessity to conserve our forest resources, and that in the second, Canada is the logical country for the manufacture of newsprint, and that there is no reason why we should supply the raw material to be manufactured in the United States. The great expansion in the industry is evidence that Canada can produce newsprint of the highest quality and at competitive prices.

An embargo would adversely affect the interests of the pulpwood dealers in Canada, who have found the American mills to be their best customers. Such dealers look with disfavor on any legislation which will tend to diminish their business, built up at the expenditure of much money and labor. There is undoubtedly a great deal to be said for their point of view.

Another objection to an embargo affects the principle. The objection is well put in a letter by Mr. F. A. MacLean, of Greening, P. Q. He criticizes an embargo as involving a grave injustice, which savours of confiscation to the owners of private lands. "Let us suppose," he says, "that I am the owner in fee-simple of timber lands for which I have paid a good price, for the sole purpose of establishing a business of exporting pulpwood, or of selling in the open market to the highest bidder. I have installed necessary plant and equipment to recover the timber and built a rossing mill to bark and prepare the wood for the pulpmill. Just then the Government steps in and says: 'You cannot do it; if you wish to make use of your timber you must sell it to Canadian mills only, or erect a paper mill yourself.' But I have no money to build a paper mill, and, as most of the Canadian mills have their own leased or owned lands, they will buy my wood only when their own cut runs short, or my price is so cheap that they are getting my wood for less than the cost of making their own. My timber thus becomes worth practically nothing to me, and the Crown, having sold me the title to standing timber

Robt. J. Heuston, Gorrie, Ont., lumber dealer, recently suffered a loss by fire.

The Northern Lumber Co., Limited, has been succeeded by the T. A. Burrows Lumber Co., Limited, at Winnipeg.

Knight Bros. Co., Burk's Falls, Ont., are building a new flume and repairing drains at a cost of \$20,000.

The Morris Lumber & Coal Co., Limited, Morris, Man., has sold out to the Corona Lumber Co., Limited.

The lumber yard of O. Chalifour, Inc., 126 Prince Edward St., Quebec City, was recently visited by fire causing a damage loss of \$10,000.

Fassett Lumber Company, Limited, Fassett, P.Q., have been authorized by supplementary letters patent to reduce their capital from \$1,000,000 to the sum of \$782,020.

The first annual picnic of the Buyers' Door & Manufacturing Co., Toronto, was held at Woodbridge on July 21st. The event was very successful and was largely attended, a pleasant time being spent by all.

Joseph Green and J. B. Dobbryn were killed and another man was injured, when five cars of a logging train broke loose on an incline and jumped the track on the logging limits of Hoard & Flaherty at Port Alberni, B.C.

Between \$6,000 and \$7,000 of paper board in the storage building of the Canadian Paper Board Co., 2 Seigneurs St., Montreal, was destroyed by fire recently. The building which was of brick construction suffered only slight damage.

The schooner "W. Taylor," is loading 1,000,000 feet of lumber at Fraser Mills, B.C., for shipment to South Africa. This is the first charter for the Cape Town market placed from Fraser Mills in the last year and a half.

Sir Frederick Becker, of Becker & Co., London, England, is about to visit Canada. The Bay Sulphite Co. and the Chicoutimi Pulp Co., in which he is interested, have under consideration extensive improvements.

The Hocken Lumber Co., West River, Ont., report that things generally at their mill are proceeding smoothly this season and regular work has proceeded with few interruptions. The company have an abundance of logs on hand and say that sales are very good at the present time.

E. W. Haskell, who for six years was superintendent of the plant of the Straits Lumber Co., Red Gap, Vancouver, Island, was recently appointed superintendent of the plant of the British Empire Timber Corporation which has erected a large sawmill and remanufacturing plant on the Bickerdike pier, Montreal.

The McLean Shingle Mill, located on the Pitt River on the site of the old shipyard plant at Port Coquitlam, B.C., was recently destroyed by fire. The home of John McLean, resident manager of the company, was also wiped out. The loss on the plant is estimated at about \$20,000.

John McConachie, one of the best-known residents of Huntsville, Ont., died lately from an attack of heart failure, the end coming very suddenly. Mr. McConachie came to Huntsville from Wentworth County nearly 40 years ago and for a long time was engaged actively in the lumber business.

The bush fires close to Sault Ste. Marie, Ont., are now well under control. There are a number of small blazes at different points which are giving a good deal of smoke, as they are likely to do when the fire is in the ground. Under these conditions it does not spread very quickly, however.

The United States Tariff Commission, after making an investigation into the duty on logs of fir, spruce, cedar or western hemlock, may cut it 50 per cent. The present duty is \$1.00 per 1,000 feet, b.m. Any reduction would be an advantage to the export trade of New Brunswick and British Columbia.

The new mill of the Brunette Sawmills at Sapperton, B. C., will start operation very shortly. The plant has been constructed at a cost of over half a million dollars. All the machinery has been installed and the mill will have a capacity of over 150,000 feet per nine-hour shift. Plans have been incorporated in the building to install additional equipment whenever necessary. The mill will be run entirely by electric motors, power being generated from the company's own plant located on the site. About 400 hands will be

employed and the output will be finished lumber, box shooks and shingles.

The Whalen Pulp & Paper Co. plans to take out 20,000,000 feet of logs in the vicinity of Thurston Harbour, B.C. The T. A. Kelly Co. is getting out 14,000,000 feet for the Powell River pulp mill and for export. These operators and other smaller ones are all on the Queen Charlotte Islands, but there are other loggers along the coast and on some of the islands.

James W. Cameron, retired lumberman, who recently took up his residence in Fredericton, following a removal from his farm on the outskirts of the city, expired lately. He was discovered by his wife lying on the basement floor with his throat cut when she went to call him to breakfast. Mr. Cameron, who was about sixty years of age, is survived by his widow, one son and two daughters.

A. C. Hanley, A. B. Clarke and J. Lipsey have commenced business as lumber retailers under the title of the Hanley-Clarke Lumber Co., Limited, Ottawa St., Montreal. Mr. Hanley was formerly with the Thomson-Kneeland Lumber Co., Limited, Montreal, and Mr. Clarke was in the lumber trade in Nova Scotia.

Among the many fires that have been raging recently in Northern Ontario is one that has been burning for some time about a mile north of Children's Shelter in Tarentorus Township near the Soo. It burned over a wide area. At the office of the district forester it was stated that there were a number of settlers' fires. The most serious bush conflagration was back of Blind River but a force of 50 men was immediately put on to fight it and it was soon under control.

A provincial charter was recently granted the National Pulp Corporation, Limited, of Hamilton, with an authorized capital of \$800,000. It is understood that the company has not yet completed its plans but the object of the organization is to repulp news paper and other printed matter, extracting the ink. Judson Culp is the promoter of the company and is the owner of the process for de-inking, which it is proposed the company will use when in operation.

Knox Bros. Limited, have removed their offices from 512-513 Drummond Building, Montreal, to the site of their new sawmill and remanufacturing plant on Bickerdike pier, Montreal. The firm have large and commodious quarters in their new location and will be able to keep in close co-operation with all branches of the extensive business which is being done in the unloading, manufacturing, shipping and distributing departments.

The annual golf match between the Grier and Dawes families was played on July 18th at the Royal Montreal Golf Club course. For the first time since the inception of these matches, three years ago, the Dawes family won both of the two foursomes played. R. J. Dawes and A. S. Dawes defeated C. B. Grier and A. H. Grier, while Norman J. Dawes and Kenneth T. Dawes defeated George Grier and Harold Grier. George Grier and A. H. Grier are members of the firm of G. A. Grier & Sons, Limited, wholesale and retail lumber dealers, Montreal.

For the purpose of giving the north country representation that its size warrants, Hon. Howard Ferguson, Premier of Ontario, recently appointed Frank Keefer, M.P.P., of Port Arthur, Under Secretary of the Department of Lands and Forests. Legislation will be passed at the next session of the Legislature, creating the post. Mr. Keefer will not give up his seat on the floor of the House to occupy the new position. He will have an office in Port Arthur which will be for the use of all the people living in the district from the Manitoba boundary to White River when they wish to discuss with him departmental matters.

The employees of the Port Arthur Division of the Provincial Paper Mills were recently presented with a safety shield and flag by the Ontario Pulp & Paper Makers' Safety Association, which is competed for annually. The mill was the winner in Class "A," which represents plants employing 200 hands or over. The Port Arthur plant's record for the year was 20 non-fatal accidents, involving a loss of 336.5 work days, which is equal to 1.75 days per full time worker. The Barber mill at Georgetown, which is also owned by the Provincial Paper Mills, Limited, won the competition this year in Class B,—plants employing less than 200 hands.

Fire recently caused \$30,000 damage to the property of Barrett Bros., manufacturers and dealers of wood products, at 273 Catherine St., Ottawa. The origin of the blaze is unknown but it is rumored that it was started by some boys who had gained an entrance to a storage shed. Thirty minutes after the blaze began, the walls of the shed had disappeared. A member of the firm reports that a considerable amount of lumber, shingles and mouldings comprised the main loss. Some machinery was also damaged. A garage belonging to Barrett Bros. was also consumed with three motor trucks. Good work by the fire department kept the flames from spreading to other parts of the plant.

Pulpwood and Pulp

(Continued from page 65)

and pocketed the money, or taken the equivalent in land exchange, now steps in and prohibits the operation of my property to my own best advantage on the plea that somebody, sometime, may get employment in a paper mill built on the strength of my timber. Meanwhile, along with my employees of the bush and roasting mill, I may look up another job or go to the poorhouse.

Heretofore it has generally been accepted as an axiom of our land, that people have inalienable right to enjoy peacefully the homes and businesses which they have acquired in lawful manner. Let it be carefully considered how far the policy of confiscating the rights of property owners may ultimately go before enforcing such legislation as this pulpwood embargo."

Then there is the fear that the United States might retaliate. That, of course, remains to be seen, although it may be pointed out that so far as tariff and commercial matters are concerned, it does not lie in the mouth of Americans to complain if other countries follow such an example as the Fordney tariff, designed to protect American agriculture and other industries, and especially aimed at Canada.

There is yet another phase of operation. This is from those Canadian mills with American affiliations, who greatly fear that the supply of pulpwood would be diminished, and that they, with other American mills, would have to seek supplies of pulp in this country at a greater cost than is now involved in converting the pulpwood into pulp.

Certain Canadian mills also believe that if any more United States mills were forced to locate here that it would mean an overproduction of newsprint, with greater competition, and a reduction in prices.

General Notes on Paper and Pulp

One timber berth was sold recently at Fredericton, N. B., at public auction by the Department of Lands and Mines. The berth, which is located at the head of Sand Brook, east of Clarendon Settlement, and contains eight and a half square miles, was purchased by the Fraser Companies, Ltd., at the upset price of \$20 per square mile.

According to statistics made public by H. S. Tewell, American vice-consul at North Bay, exports of merchandise to the United States from Northern Ontario during the first six months of 1923 amounted to \$17,285,608, being almost double the value of the same kinds of products exported during the corresponding period of 1922. Forest products, comprising pulpwood, pulp, paper, lumber and lath, represent over half of the total exports, the value of commodities in this class being \$9,234,718. Minerals were valued at \$7,400,000 and mineral items at \$1,600,000. An increase in the value of mine products amounting to almost \$6,000,000 accounts for a large part of the augmented exports this year.

Preparations are now being completed for the early opening of the provincial schools for Forest Rangers and experts in the manufacture of paper. The manufacturing of paper will be taught in the Three Rivers technical school. Students of the school after they have completed their three years study at the Technical, will be given the opportunity of following a supplementary course in paper making which will be given by special teachers and will cover a period of two or three years. The forest Rangers school will be established at Berthierville where the Quebec government has its forest nurseries. Over 50 pupils have already entered their names for that particular course.

Timber For Sale

244,000,000 feet of high-class timber in B. C. on fresh water, near railway, more than half of which is first class pine. \$60,000 needed to clear title, but will take balance as timber is cut.

Only practical lumbermen, giving references, need apply. Box 332 Canada Lumberman, Toronto.

R. G. Chesbro,
Manager

Edgings

The Charter Lumber, Victoria, B.C., has been wound up voluntarily.

The Campbell River Lumber Co. have erected a handsome new office at White Rock, B. C.

Hugh Reid of Laminated Materials, New Westminster, B.C., was in Toronto recently calling upon the trade.

The name of the Canadian Link-Belt Co., Limited, Toronto and Montreal, has been changed to Link-Belt, Limited.

J. A. Stewart, Fraser Mills, B. C., has arrived in Toronto and joined the sales staff of the Canadian Western Lumber Co.

H. J. Terry of Terry, Nicholson, Cates, Toronto, and Mrs. Terry are holidaying at Minett, Muskoka.

R. G. Chesbro, wholesale lumber dealer, Toronto, has gone on a month's business trip to Vancouver and other western points.

Theo A. Burrows Lumber Co., Limited, Winnipeg, Man., have applied for letters patent to increase their capital to \$1,000,000.

Buchette Archille, lumber dealer, has been registered at Montreal.

H. P. Rowles, sales manager of the Duncan Lumber Co., Vancouver, B. C., was in Toronto recently, calling upon old friends in the trade.

J. R. Carter of the Fesserton Timber Co., Toronto, and Mrs. Carter are spending a holiday at the Wawa Hotel, Lake of Bays, Ont.

A. F. Windau has succeeded G. H. Page as superintendent of manufacturing at the Genoa Bay Lumber Coy's plant at Genoa Bay, B. C.

K. M. Brown, of the A. E. Gordon Lumber Co., Toronto, and Mrs. Brown have returned after spending a pleasant holiday at Banckburn, Muskoka Lakes.

The Port Moody Lumber Co.'s plant at Port Moody, B. C., which was recently overhauled at a cost of \$150,000, and several new machines added, has resumed operations.

A serious fire visited the premises of R. J. Hueston, Gorrie, Ont., recently. A chopping mill and warehouse were burned but several thousand feet of dressed lumber escaped the flames.

The Merrill and Ring Lumber Co., of Vancouver and Duncan Bay, who have a camp on Theodosia Arm will construct six miles of logging railway to facilitate further logging operations at that point.

The sawmill of J. & W. Duncan Limited, at Weir, Quebec, was entirely destroyed by fire on July 17th. The origin of the fire is unknown. No lumber was burned, and the mill will be rebuilt immediately.

W. H. Farrell Lumber & Fuel Limited have, owing to increasing business, moved to new offices at 704 Federal Building, 85 Richmond St. West, Toronto, where the firm have attractive and commodious quarters.

Thos. M. Fraser, formerly of Prince William, N. B., died recently in Vancouver, aged 58 years. He was a well known and highly respected lumber dealer, and is survived by his wife and one son. Mr. Fraser had resided in Vancouver during the past twenty years.

The work of replacing the sheds at the Thurston-Flavelle lumber plant, at Port Moody, B. C., which were destroyed by fire some few weeks ago, is now in progress. The mill is at present running at full capacity on account of the activity of the lumber market.

A. McPherson, sec.-treas. of the Quincy Adams Lumber Co., Limited, Orillia, Ont., state that they are closing out and giving up the lumber business at the present time. They have found help very scarce, especially good men, during the past few months.

Wm. Turnbull, late Secretary to F. C. Wade, B. C. Agent-General, London, Eng., and formerly British Columbia Lumber Commissioner at Victoria, was in Toronto recently on a visit. Mr. Turnbull will shortly embark in the lumber business in his own behalf in Montreal.

One of the largest timber sales that the Canadian Pacific Railway has made in several months has just been made on Vancouver Island. A group of Seattle lumbermen have acquired 12,000 acres of timber land at Horne Hill. The timber on this stand exceeds 200,000,000 feet.

Lausophe Nault, Daveluyville, Arthabaska County, Que., has recently put in a Yates A 4, fast feed planer and matcher and a Yates 341 band resaw. Mr. Nault has erected a new mill and is developing a fine business in milling-in-transit, having already taken care of large quantities of spruce. He has also built a new power plant.

Announcement is made that James Bannerman, acting agent of Dominion lands and crown timber at Kamloops, B.C., since the promotion of W. C. Cowell to the New Westminster agency, has been definitely appointed agent. The new agent has been a resident of Kamloops for more than 20 years in the service of the department.

The Belgo Canadian Paper Company, Limited, Montreal, was recently incorporated by provincial letters patent with a capital of \$13,500,000. The company manufacture, export and deal in lumber, pulpwood and paper products. The capital allowed the company is the largest given for several years to any company doing business exclusively in Quebec through provincial letters patent.

Plouffe and Poitevin, 212 McGill St., Montreal, is the name of a new wholesale lumber firm. D. Plouffe was formerly with Daniel Cream Limited, Montreal, and J. C. Poitevin was with E. J. Maxwell, Limited, and the McLennan Lumber Co., Limited, Montreal. The firm represent Roch Julien, Quebec; J. C. Bartram, Ottawa, and the Thurn-Maxson Lumber Co., South Bend, Ind.

Although the Government has declined to accede to the desires of the lumber trade in the matter of the sales tax, it is possible that arrangements will be made in the regulations now being drawn up to meet some of the objections as to the complex methods of collection as originally outlined. Some lumbermen believe that the Government will be compelled to modify the licensing system.

Under arrangements already completed, the preference share capital of the Manitoba Pulp and Paper Company, Limited is to be increased from \$2,500,000 to \$2,800,000. Many doubts regarding commencement this year on construction of plant were removed by announcement that arrangements for financing of enterprise were completed recently. B. W. Thompson, vice-president of J. D. McArthur Company, who returned from Montreal, made public this statement.

The Abitibi Power & Paper Co. have definitely decided to go ahead with the original plan to complete the townsite at Iroquois Falls. This plan calls for housing accommodation for all the married employees of the company, no matter what position they occupy in the mill. Orders have been given by President Anson to start immediately on 25 houses. The dwellings will be of a moderate-priced comfortable type and will contain five rooms. Eight of them will be single houses and nine double, built on lots of 50 feet frontage to each house.

The Toronto sales office of the Schroeder Mills & Timber Company, with Frank J. Archibald in charge, has been moved to 85 Richmond Street, 824 Federal Bldg., Toronto. The company have added a picket mill to the Lost Channel plant. The saw mill is cutting about 140,000 ft. per day. The lumber and laths produced are loaded direct from the sorting tables on to flat cars and hauled via the Key Valley Railway a distance of 11 miles, to the piling ground at Pakesley, Ont., from where the product when seasoned is shipped via the Canadian Pacific Railway.

George B. Nicholson, president of Austin & Nicholson, Chapleau, Ont., states that lumber production in that district is fully up to last year. The movement has been fairly active and prices are slightly ahead of last season but no yet in harmony with operating costs. Austin & Nicholson are operating all their plants to capacity and have an abundance of logs for the season, their drives having come through with reasonable success. Labor conditions are reported by the firm as being extremely unsettled. There is considerable difficulty in securing men to get down to steady work and remain at it. It is not expected there will be any improvement in this respect in the near future. All this restlessness and unsettled attitude on the part of labor tends to enhance the prices of the finished product.

The tractor as a means of hauling logs from the woods into logging camp, loading platforms or booming grounds has found favor with Vancouver Island logging operators. Matt Hemmingsen, operating at Cowichan Lake, has one tractor in service and is contemplating the purchase of additional machines as he has found them of great service in carrying timber over the rough logging roads to the lake shore. Their operation has been found to be less costly than construction and operation of locomotives over steel tracks. The Genoa Logging Co., a subsidiary of the Cameron and Genoa Bay companies, has two tractors in service now, giving satisfactory results. It is reported that loggers operating in the Sooke district along the line of the Canadian National Railways, and at other points comparatively near the west coast, are contemplating the operation of tractors instead of logging steam railroads.

They averaged 17 cords per load

After exhaustively testing their first Northern "Caterpillar"* Logger last winter, making closest comparisons in costs and results with other methods and machines, the Mt. Murray Woodlands Corporation of Mt. Murray, Quebec, has now standardized on "Holt" and purchased four more of these powerful tractors for next winter's operations.

Hauling day and night over common snow roads with many bad grades, each load averaged around 17 cords of green unbarked spruce, a remarkable record over those roads. By the end of last season the total cordage, the continuous operation, number of trips, low costs and the ability of the "Caterpillar" to meet every situation, convinced the Mt. Murray officials that no other machine or method can successfully compete with the "Caterpillar."

Let us give you further facts about remarkable "Caterpillar" records on this, as well as on other Canadian pulpwood and lumber operations.

**There is but one "Caterpillar"—Holt builds it*

Shows you how to advertise better and for less money. Produced regardless of cost as an educational medium. Address: "Printed Salesmanship," Dept. H., 349 Adelaide Street West, Toronto.

What One Tractor Did in Hauling

On their limits in Madawaska, Ont., the Murray & Omanique Lumber Co., of Barry's Bay, Ont., who last winter had one of the Linn logging tractors in operation, report that the machine gave good satisfaction. It did a large amount of hauling over a 4½-mile road. This is nearly all down steep grades which had to be sanded. There were two upgrades of about 7 per cent., over which the Linn hauled seven or eight sleighs and a load on itself, making a total of 320 green hemlock logs to the trip. The tractor made four trips by day and when it worked nights, it made three trips and averaged well over 2000 hemlock logs for twenty-four hours or for seven trips, including the hours of daylight and darkness. Of these 2000 logs it is a fair estimate to state that not less than 25 per cent. of them were 24-foot timber and the balance 16-feet. As hemlock is well known to weigh as much as hardwood, this consisted of a pretty heavy load. and in addition to this, after the haul was over, the Murray & Omanique Lumber Co. got out with this tractor all their boom timber and also some 300 red oak logs which they require to use in the manufacture of sleighs for next winter's operation.

Mr. Omanique said the tractor saved them a great deal more than if they had hauled the logs with horses, and took the place of, at least, twenty teams. He adds that if the firm had prepared for the tractor in the first place by possessing all No. 1 sleighs when they began, the machine would, no doubt, have done double the work.

Lumber Cut Small Around Three Rivers

The Wayagamack Pulp & Paper Co., Three Rivers, Que., state that they are not operating their sawmill very extensively this year but expect to cut some pine and a small quantity of spruce. Very few mills in that district are running on a large scale. "The cut will be smaller than usual," says Frank I. Ritchie, manager of the Wayagamack Pulp & Paper Co., Limited. At the present time labor is plentiful for the mills but woods help is very scarce.

Sarnia Lumber Co. Adds New Line

A new building has been fitted up on South Vidal St., Sarnia, Ont., by McGibbon, Limited. The structure is 40 x 60 feet, two-storeys high, and will be used for manufacturing stucco and composition flooring by the Hachmeister Lind Co., of Pittsburg, who operate one of the largest chemical plants in the United States. The McGibbon Company recently added these lines to their business and from their Sarnia plant they expect to supply the trade in Ontario. The firm already have booked orders in Kitchener, Stratford, Woodstock, Hamilton, Toronto and Quebec.

The destruction of a forest is a direct loss to the public. A spark from a passing engine, or the dropping of a lighted match may cause the loss of timber worth millions of dollars. The public is thus deprived of lumber for building or construction purposes. It takes from seventy-five to a hundred years or more, for trees in a forest to grow to maturity.

"My 3,000 trees now form a complete windbreak and shelter for house and yard and also give me an ideal garden spot," wrote a central Manitoba farmer to the Director of Forestry recently. "The trees were planted in 1903 and 1904, approximately 3,000 being set out in the two years. Ninety-five per cent lived and made good growth, a perfect windbreak and protection to garden. One thousand dollars would not buy this shelter, no, nor three times that amount."

The home forest, in many sections of the country, will supply the timber which the farm needs for buildings, fences, fuel, repairs of all kinds, and many other uses; and there will often be a surplus which can be sold in the form of standing timber, sawlogs, posts, cross-ties, pulpwood, fuel-wood, and blocks of billets for making spokes, handles, spools, boxes, barrels, and excelsior.

C.M.P. POWDERED MILK

It Pays to Supply the Cook With Milk

Milk bread is one of the greatest muscle builders. See that the cook has plenty of "Trumilk" and "Milkstock" and he can easily prepare this most wholesome food. It will pay. Your men will work better and accomplish more; they will be more cheerful and contented.

C.M.P. powdered milk is convenient. It is pure, fresh, country milk or skimmed milk (as ordered) in its handiest form. Enables the cook to serve the same foods in a dozen different forms!

Write today for samples and prices.

Relieve the Box Shook Shortage By the use of Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and
other dimension stock, LATH, HANDLE MATERIAL, Etc.
These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 40" Long

All cut any required thickness from 1/4" to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf 1/8". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00 per M ft.
SAWING & OVERHEAD	2.00 " "
NET COST	10.00 " "

Only One Man in 4,000

is a regular purchaser of lumber for his own use

Statistics show that there are only 2,000 contracting-engineering firms in Canada and a population of 8,000,000—or one to every 4,000.

What use then has your advertising with a circulation of 100,000 that reaches only 25 of your prospects? Is not a circulation of 4,000 that reaches 4,000 known buyers more logical, more economical and more effective, as an advertising medium?

Think it over and you will include us in your appropriations for each week "Contract Record & Engineering Review" is read to the amount of 4,000 copies—or 2 copies to every firm in business.

A BAND RIP-SAW YOU CAN DEPEND ON

Yates 281 Band Rip-saw is a smooth running and well balanced machine. One firm advised that work produced on their 281 was so fine that it appeared to be sand finished. This machine is economical in operation; blade is made thin, thus kerf loss is minimum and the careful construction of the machine itself eliminates repair costs; the patented knife edge straining device on all Yates Band Saws is a very economical and desirable feature. It would be well to inquire about Yates 281 when you plan installing a Rip-Saw.

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"

"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

LINK-BELT

Chain Drives for Saw Mills

A recent development in sawmill practice has been the application of Link-Belt Silent Chain (with cut wheels) for short-center drives from motor or engine to line shafts, pumps, fans, conveyors, etc.

The saving in power and space through this drive, its flexibility, positiveness, and extremely high efficiency (98.2%) command the attention and interest of all operators.

Send for book No. 660, "Link-Belt Chain and Equipment for Saw Mills", and Link-Belt Silent Chain Data Book No. 125.

10 H. P. Link-Belt
Silent Chain and Roller
Chain Drive.

Particularly in electrically-operated plants, the combination of Link-Belt silent and roller chain drives, for conveyors and all equipment, offers advantages that should not be overlooked.

Let us tell you more about Link-Belt efficient chain drives.

First aid to good baking--

SWIFT'S JEWEL SHORTENING

Swift's Jewel Shortening comes in tins or wooden pails, tubs or tierces.

There's nothing on the cook-house table that can take the place of a round of pies and cookies. Rich, flaky crusts, nicely browned and filled with raisins or other fruits—that's real "grub." Hot biscuits, too, or a pile of doughnuts, these are old favorites when days are chilly. Make them with Swift's Jewel Shortening and they can't be beaten. Jewel Shortening is pure and sweet; your chef will get better results by using it.

LUMBERMEN'S

EQUIPMENT

**"Built
To
Last"**

A big feature, well known to users of "Long" machinery, is its rugged strength. The frame of this Lath Bolter for instance is built much heavier than is usual with machines of this type. Practically all other parts of this machine, too, are extra heavy. Furthermore, "Long" machinery is not merely "assembled" at the factory—it is "fitted". These facts are responsible for the greater service which you can expect from any "Long" machine.

Many new features have been incorporated in this machine which are not shown in the photograph. Write for full particulars.

TRANSMISSION MACHINERY FOR THE SAWMILL

When you are overhauling your mill you will find quite a lot of parts—boxes, shafts, gears and pulleys—that need replacing. We can supply anything you will need in this line.

We supply pulleys in any size up to 12' in diameter, sheave wheels too. Steel shafting up to 25' long as large as 12" diameter, rough or finished, keyseated as desired. Also solid and clutch couplings, and set collars of every kind.

Our boxes and bearings, shaft hangers and mule-stands are furnished in standard styles and standard sizes.

If you require gears we build them in steel, iron and wood, cast or machined. Our patterns cover gears and blanks of most sizes called for and we can furnish what you want on short notice. Paper and iron frictions are accessories which we turn out right. Let us re-new yours.

Make out your repair list this week and we will give you right prices and quick delivery on it. Our workmanship is guaranteed.

ATKINS

STERLING QUALITY SAWS

Good Saws, Saw Tools and Machine Knives

are necessary for speed, economy and efficient production.

They are the deciding factor in the success of any sawmill, furniture factory or woodworking plant. Thousands of saw users know, because they have convinced themselves, that the installation of Atkins Saws, Tools and Machine Knives means more and better work with larger profits.

Give Atkins a Trial

We will make good with our products and convince you that they are what we claim in our slogan.

"The Finest on Earth"

Leading manufacturers of Saws, Saw Tools and Machine Knives, also Atkins-Coleman Feed Rollers. Use Acrolite and Ferrolite Wheels for your saw gumming and knife grinding. Increase your belt efficiency by using Cantol Belt Wax.

"Kendall" Gang Circular

The Machine that will convert your small logs into more and better lumber quicker than ever before

This illustration shows the latest design of 12" "Kendall" gang circular which takes 21-36" saws No. 10 gauge and cuts cants up to 12" in thickness. Like the other models it has a hollow mandrel 5-3/16" diameter, and water cooled saws. Each saw has a separate guide easily accessible and readily adjustable and the end bridge-tree is so designed that it swings back out of place for changing saws. As can be seen from the cut the feed, which is variable, is driven independent of the mandrel and the press rolls are steam operated. Feed rolls are 36" long—drive pulley 30 x 22", floor space 9'-0" x 11'-0".

We have no hesitation in saying that this gang circular cuts lumber absolutely the smoothest and truest to size of any machine on the market today.

These machines are made in the following sizes:

26" Saws for 8" Cants using weight press rolls.

32" Saws for 10" Cants using steam press rolls

36" Saws for 12" Cants using steam press rolls.

We also make a complete line of twin circulars with either chain, rope or steam feed for slabbing logs for these machines.

The "Why" of it

CERTAINLY, it is possible to buy CHEAPER White Pine than that manufactured by Hocken—but it is equally certain that it is impossible to buy BETTER White Pine. And it is on the basis of quality, not price, that Hocken White Pine has a national reputation. Made only from choice, small logs, expertly manufactured, rigidly culled and graded.

Rich in Those "Vitamines" Called "Selling Qualities"

There are certain characteristics which must be inherent in lumber to give it that prime requisite—saleability. These qualities are easily recognized—by us—by you—by your customers. And they are always found in Fesserton lumber.

Which is the best reason why you should be handling it.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

MONTREAL, P.Q.

Long Bell Hardwoods are dependable

Why

Long-Bell trade-marked hardwoods identify—not only dependability—but economical dependability—to all users of hardwoods.

Logs from our own virgin forests. Each log selected and cut for the purpose for which it is best adapted.

Class of timber producing excellent width and lengths.

Manufactured in our own Hardwood Mills, equipped with modern band machinery.

Manufacture supervised by experienced hardwood men. Thoroughness given every detail of manufacture.

Particular care given to uniformity of thickness—carefully edged, equalized and trimmed.

End-buttred with mitre toothed saws.

Carefully sorted at chains. Drying yard arranged to give thorough circulation to stocks in pile.

Every detail in sticking and drying carefully observed to insure best results.

Experienced inspectors grade lumber for shipment.

Double check inspection at cars in loading to insure uniform grades.

Same care exercised in loading in cars as in manufacture.

BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

paper represents the most practical and efficient means of sending a sales
message to an entire industry—and in a manner that will demand the
attention of the leaders in that industry.*

PAINTED TIMBERS

Disclose any waste of oil. Timbers do not become oil soaked because you can see the oil and wipe it off. Painting lowers your insurance rate.

UNPAINTED TIMBERS

You cannot see the waste of oil which, in time, saturates the wood, collecting dust and dirt and increasing fire risk.

Saves its Cost in Oil Alone in Less Than a Year's Time

Hundreds of Lumber Mills were Wasting Oil by Over-lubricating

THEY didn't know it until Tropical Oil Resisting White revealed the waste on glossy white posts, bridge trees, and roller beds which had previously been so black and oil soaked the oil waste could not be seen.

In these mills today the oil saving pays for Tropical Paint. The reduction in insurance premiums which the Underwriters allow for using Tropical Oil Resisting White and "keeping a clean house" is clear profit. In addition, THE FIRE RISK IS GREATLY REDUCED. If bearings over-heat, the danger of fire is less because tim-

bers painted with Tropical Oil Resisting White do not absorb oil!

Tropical Oil Resisting White is the best safeguard against the fire menace of oil soaked timbers. It is a paint made specially for lumber mills—a pure white, long lasting paint which makes a black bridge-tree look as if it were white enameled.

Send back the coupon and we will send you a test sample of wood which absolutely proves the superiority of Oil Resisting White over all other paints for lumber mills.

Convince yourself!

The U. S. Epperson Underwriting Company and The Rankin-Benedict Underwriting Company also approve the use of Tropical Oil Resisting White.

THE TROPICAL PAINT & OIL COMPANY CLEVELAND OHIO

The Underwriters Laboratories of the National Board of Fire Underwriters approve of Tropical Oil Resisting White as it approves of no other saw mill paint. They say:

"Tropical Oil Resisting White is a flat, non-impregnating white paint, composed of a white mineral pigment and an oil vehicle in proportions of about two parts of pigment to one of oil (by weight). This manufacturer, (The Tropical Paint & Oil Company) is an established concern whose standing needs no special comment. The product when properly applied to wood* not previously contaminated with oil, grease, etc., will render it practically impervious to the action of such materials, by preventing the seepage of such grease or oil into the wood."

*And even on oil soaked wood, Tropical Oil Resisting White is most efficient when applied according to our directions.

LINK-BELT

Chain Drives for Saw Mills

A recent development in sawmill practice has been the application of Link-Belt Silent Chain (with cut wheels) for short-center drives from motor or engine to line shafts, pumps, fans, conveyors, etc.

The saving in power and space through this drive, its flexibility, positiveness, and extremely high efficiency (98.2%) command the attention and interest of all operators.

Send for book No. 660, "Link-Belt Chain and Equipment for Saw Mills", and Link-Belt Silent Chain Data Book No. 125.

10 H. P. Link-Belt Silent Chain and Roller Chain Drive.

Particularly in electrically-operated plants, the combination of Link-Belt silent and roller chain drives, for conveyors and all equipment, offers advantages that should not be overlooked.

Let us tell you more about Link-Belt efficient chain drives.

Empire Forestry Conference Convenes in Capital of Canada

Representative Delegates From All Portions of British Empire Gather to Discuss Important Problems in Conservation of Wooded Wealth—The Greatest Gathering Relating to Forestry Matters Ever Assembled—Warm Welcome Extended Delegates on Their Triumphant Trip Through Maritime Provinces—Other Parts of the Dominion and the West Will be Traversed

By resolution of the British Empire Forestry Conference held in London in July 1920, it was decided that the next meeting in 1923 should take place in Canada. That conference is now being held. The delegates from all parts of the Empire have received a most enthusiastic welcome.

The programme is an extensive one. In addition to the conference proper, the meetings for which have taken place in Ottawa, a tour of the entire Dominion has been admirably arranged. The trip is divided into four sections, Eastern Canada, Northern Ontario, the Prairie Provinces and the West. The object of the tour is to give the delegates an adequate idea of the forest resources of this country in relation to practically every branch of industry connected with forest products. Thus the delegates have worked and will visit lumber mills, pulp and paper mills, camps, woodworking plants, nurseries, forest fire stations and the forests themselves.

In the introduction to the general programme it is stated that the Canadian authorities are greatly indebted to Lord Lovat, Chairman of the Imperial Forestry Commission and to his colleagues, who have given unstintingly of their time and rendered valuable assistance.

"In the arrangements of the tours, and in providing facilities for the inspection of industries, and other features, we are under a debt of gratitude to the provincial forest authorities, the Canadian Pulp and Paper Association, the Canadian Lumbermen's Association, the Canadian National and Canadian Pacific railways, all of whom have placed their best facilities at our disposal. The Conference is, as a body, indebted to numerous governmental organizations, private companies and individuals who have entered into the arrangements with a generosity, hospitality, and spirit of helpfulness, which have made the arduous task of organization a happy one for those responsible for it."

Delegates are in attendance from the United Kingdom, Australia, India, Ireland, New Zealand, South Africa, Crown Colonies of Nigeria, Kenya, Ceylon, Straits Settlement, and Federated Malay States, British Guiana and all parts of Canada. There are a number of honorary and associate delegates also present.

The officers of the conference are:—Chairman—Major General Lord Lovat, K.T., K.C.M.G., D.S.O., Chairman, Imperial Forestry Commission.

Manager—E. H. Finlayson, B.Sc.F., A.M.E.I.C., Acting Director of Forestry, Department of the Interior, Canada.

Secretary—Roland D. Craig, B.S.A., F.E., Forest Resources Specialist, Dominion Forestry Branch, Department of the Interior.

Associate Secretary—Ernest Voorhis, M.A., Ph.D., Research Engineer, Natural Resources Intelligence Branch, Department of the Interior.

The Sessions Open at Ottawa

The opening meeting of the conference was held on July 25th at Ottawa. This was a more or less formal session and served to introduce the delegates to one other and to the Canadian authorities.

The following message was read from H.R.H. the Prince of Wales:—

"As president of the Empire Forestry Association, I send a message of good wishes to the delegates taking part in the Empire Forestry conference. I shall watch the result of their labors with great interest. Their task will be to provide accurate information of our forest resources, to foster trade in British timbers, and to promote a sound policy of forest conservation throughout the Empire. By such means alone can we ensure that our present resources are used to the best advantage and our supply of timber maintained for the future. It will be the earnest endeavor of the Empire Forestry Association to create and support well-informed public opinion upon which the success of this policy must largely depend.

"Of our affiliated societies the most important and successful is the Canadian Forestry Association, whose 13,000 members I congratulate upon a fine record of patriotic work. The forests of Canada are a priceless heritage and the association is rendering a great public service by fostering widespread interest in them. May it grow and prosper.

"I hope the conference will have far-reaching results and that one of these will be a greatly increased support of the Empire Forestry Association, whose work I commend to every patriotic citizen.

"(Signed), EDWARD P."

The delegates were welcomed by Premier King, who in opening the conference made reference to the recent action of the Govern-

Roland D. Craig, Ottawa, Ont.
Secretary of the Conference

L. McIntosh Ellis, New Zealand
Delegate who is a former Canadian

ment in securing power from Parliament to prohibit the export of pulpwood and its intention to establish a Royal Commission on the forestry problem.

"Next to agriculture," he said, "the wood industries constitute the most important source of our national income. How rapidly this source is being depleted by fires, by insect pests, by exports of raw products, by undue exploitation and unnecessary and often wanton destruction, few if any of us have begun to appreciate.

"We recognize," he continued, "that to restrict trade in any direction is the last of measures to which a government should resort, and we are hopeful that in the benefits which will accrue to our foresters from association, consultation and conference with forestry experts from other parts of the British Empire, as well as from information which we hope our own commission will elucidate, we may find a yet more excellent way of dealing with the problem of the economic development of our forest resources. We recognize that in the past we have been profligate with our forest wealth, that we have wasted our heritage, that, while we have been proficient in utilization, we have been deficient in preservation. Whilst we have talked in terms of quantity, we have lost sight often of the importance of quality, not without its cost to our trade. Some of these evils, and some of the misconceptions and false impressions which have grown out of them we hope this conference will go far to remove."

Lord Lovat Ably Responds

Lord Lovat, on being appointed chairman, said he was deeply alive to the honor done him. "This will be," he said, "the greatest

E. J. Zavitz, Toronto
Provincial Forester of Ontario

Brig. Gen. J. B. White, Montreal
Who welcomed the delegates

conference on forestry that has ever been held in the Empire. I feel at the same time that the greatness of the honor confers also great responsibilities.

"On the subject of conferences in general, I am satisfied that the personal interchange of ideas is a necessary conception to the modern idea of Empire. It is necessary if the Empire is to exist that we get together and share views. It is necessary for the constituent parts of the Empire to realize the ideal of the individual parts. It is necessary to consult together for policy and to take joint action. Without this I am afraid we shall fall into the errors that have frequently occurred in the past. Since the war if we have been taught anything it was that surely a machine can run for a common purpose, when there is an interchange of feeling and ideals. And we must employ this in times of peace."

The speaker stated that the experiments carried on by the old laboratories of the Old Country could be adapted to the newer countries, and said that in research work one could help the other.

He spoke of the many parts of the Empire that were represented and pointed particularly to the timber trade representatives. He said that industry had spent \$120,000,000 in timber alone in 1920 and only 15 per cent. had been spent within the Empire.

Speeches were also made by the representative from nearly every British possession in the world, including New Zealand, Australia, South Africa, Ireland, Colonial Office, West Africa, East Africa, Malay States, Ceylon and British Guiana. The delegates commenced their tour of Eastern Canada on July 26th.

Visit to Canadian Metropolis

Montreal was the first city to be visited. The delegates arrived from Ottawa on a special train, part of which was equipped with

forest products and also with a pictorial representation of a village before and after a forest fire. The visitors were received by Brig.-General J. B. White and Mr. Edward Beck, the local committee in charge of the arrangements. The party proceeded to the Forest Products Laboratories where they inspected each of the departments under the guidance of Messrs. Kynoch, Blair, Coderre, Cameron, Hale and Maxwell. They visited the timber testing, pulp and paper, paper-making and other sections.

The luncheon at the Ritz-Carlton Hotel was presided over by Brig.-General J. B. White, who gave the delegates a very hearty welcome to Montreal and the province of Quebec. He expressed the belief that the conference would be of benefit to the Empire and even greater benefit to Canada. It was realized that owing to fires and the budworm the forests were being depleted at too rapid a rate. It was important to find a solution of this matter and it was hoped to get advice from the men who attended the conference from different parts of the Empire. It was particularly gratifying that Lord Lovat was chairman of the conference. Some of those present had served under Lord Lovat, and realized that anything he undertook he carried to a successful conclusion. The speaker understood that the delegates would be formally welcomed to the province when they visited Quebec, but he desired to convey a message received from Hon. L. A. Taschereau, the Premier. The chairman declared that the province of Quebec had the finest forest lands in the Dominion and expressed appreciation of the co-operation given by the Provincial Government to the lumber and forest industries.

Lord Lovat, in reply, alluded to his association with the chairman during the war and declared that the work of General White in the matter of directing the timber operations during the war had not been properly appreciated. He worked for 24 hours, if need be, and worked most efficiently. The delegates had been received with great kindness from the moment they landed. They came as learners, not teachers. The delegates were looking forward with great enthusiasm to the trip which had been worked out by Mr. Finlayson.

Called at Colleges and Paper Mills

The party then went by cab to the top of Mount Royal and afterwards by motor car to Macdonald College, leaving in the evening by train for Proulx, where the conference was met by Mr. Ellwood Wilson, chief of the forestry department of the Laurentide Company. The delegates visited the nurseries and plantations which the Laurentide Company maintain at that point. Rain interfered with the shanty dinner, which was to have been served in the woods, but that portion of the programme was carried out in the dining car, shanty food being served by some of the company's waitresses.

In the afternoon an inspection was made of the Laurentide paper mill. In the evening dinner was served the visitors at the Laurentide Inn, after which, at 10 o'clock the party left by their special train over the Canadian National Railways for Jonquiere where they visited the extensive pulp and paper mills of Price Bros. & Co.

The party inspected the Grand Decharge at the foot of Lake St. John, where a \$45,000,000 hydro-electric development is going on. From here the party were motored over to Kenogami, where Sir William Price and his associates entertained them to lunch. From here they went on to Chicoutimi, where the mayor presented them with the freedom of the city, the keys of the city being placed in the hands of Lord Lovat, chairman of the conference.

The Tour of Quebec Province

After touring the Saguenay the company arrived at Quebec on July 29th, leaving the next day for the Maritime Provinces. Lord Lovat and Sir James Calder were entertained by the Metapedia Salmon Club while the other delegates continued on the train to Campbellton, where they were met at the station by Premier Veniot and lumbermen from the district. Premier Veniot spoke a few words of welcome and the party was then divided into groups, each visiting different mills in the district. The party left Campbellton at 2 o'clock in the afternoon and proceeded by special train over the Canadian National Railways to Bathurst, N.B., where they were met by Mayor W. J. Kent and a number of prominent citizens. The afternoon was spent visiting various lumber and pulp mills and in the evening the conference was banqueted at the Gloucester Hotel. A representative gathering of New Brunswick men attended the banquet, speeches being made by Premier Veniot, Mayor Kent, Lord Lovat and other overseas delegates to the conference.

The Future Supply of Timber

That Canada's future timber supply can never be obtained from planted forests, was the opinion expressed in a paper on "Silviculture" read by Dr. C. D. Howe, Dean of the Forestry Faculty of the University of Toronto, at one of the sessions of the British Empire Forestry Conference.

Dr. Howe referred to the exploitation of Canada's timber wealth which had taken place in the past, and while this had made tree

The busy sawmill and general store of the Porcupine Pulp & Lumber Co. at Hoyle, Ont.

planting necessary in certain of the older settled parts of the country he did not think Canada could look to that source for its future timber supply.

In his paper Dr. Howe dealt comprehensively with the timber situation confronting the Dominion. He indicated policies which would be best calculated to conserve the supply of timber, and stressed the necessity for the creation of forest reserves while there is yet time.

R. L. Robinson of the British Forestry Commission, in commenting upon Dr. Howe's paper, felt that the outstanding point to stress was the lack of forest reserves in Eastern Canada. Forests of Eastern Canada, he said, had been depleted and fires had been universal. He thought that the two foremost aims of Canadian forestry proponents should be rehabilitation of degraded areas and prevention of degradation in areas still untouched.

E. J. Zavitz, Chief Forester for Ontario, stated that the problem of protecting forests in his Province from fires was so pressing that it would overshadow other forestry activities for years to come.

Speakers contributing to the debate during the sitting were: Brig.-Gen. J. B. White, of the Riordon Company; Prof. Troup, of Oxford; Ellwood Wilson, forester for the Laurentide Paper Company; P. Z. Caverhill; Sir James Calder; Mr. Prince, Chief Forester for New Brunswick; Mr. Naden, Deputy Minister of Lands for British Columbia; Mr. Trevor, of the India Forest Service; Mr. Forbes, of Ireland; Mr. Fraser Story, and the Chairman, Lord Lovat.

Regeneration of the forest was the subject of addresses at another session. A unique feature of South African procedure, said C. E. Leget, Chief Conservator of Forests for the Union, was that the ground was given complete treatment before planting, being cleared and plowed six months beforehand. Costs were accordingly high, he said, amounting to £5 to £10 an acre, but he claimed that this was offset by the very thick growth secured and early financial returns from thinning operations.

L. M. Ellis, Director of State Forests of New Zealand, spoke of plantation work in his country. Experiments, he said, had been made with 200 kinds of trees, and decision was finally made in favor of four conifers, all derived from the Pacific coast of North America, the most widely used of which is the Douglas fir. During 1922 more than 12 million trees were planted out throughout New Zealand.

Forestry Conference Delegates Visit Miramichi

The Miramichi N. B., district was recently favored with a visit from the delegates of the Empire Forestry Conference and undoubtedly it will be of a very great advantage to that section of Canada. These gentlemen, who toured Quebec and New Brunswick before the Conference in Ottawa began, came by automobile from Bathurst to the J. B. Snowball Company Depot Camp on the Bathurst Road.

J. W. Brankley, Chatham, N.B.

W. B. Snowball, Chatham, N.B.

They extended greetings on behalf of the East

of the Miramichi and were given an opportunity of partaking of a genuine "woods dinner." After a satisfying meal prepared in cook Morrissy's best style, Mr. W. B. Snowball, who presided at the dinner, proposed the toast "The King" which was honored in the usual manner. There they were welcomed by a number of prominent lumbermen. Then came the health of the visiting members coupling with it the name of Lord Lovat who responded in a happy way. He concluded by proposing the health of Mr. Snowball. In replying, Mr. Snowball spoke briefly giving an account of his firm's con-

nection with the lumber business in that section during the past forty-six years.

After dinner, at which about one hundred were present, some time was spent in visiting the woods near the camp. The visitors were fortunate in having an opportunity to meet Dr. J. D. Tothill, Dr. F. C. Craighead and Mr. M. B. Dunn of the Federal Department of Entomology, who furnished much information regarding insect pests. Various lumbering methods were illustrated around the camp and two hours were spent profitably. The visitors had an opportunity of meeting Frank O'Connor, Camp Guardian, who for over sixty years had been connected with lumbering on the Tabucintac.

On the way from Bathurst to the Depot many paid a visit to the Red Pine Lookout Tower from which they viewed the surrounding country and were impressed with the splendid stands of hardwoods.

At the conclusion of the visit to the camp the party boarded motor cars which had been arranged for by Mr. J. W. Brankley, manager of the Miramichi Lumber Company, and the trip to Chatham was made by way of the Russell road and through Douglastown and Newcastle in order to give them some idea of the lumber industry on the Miramichi. The sight-seers arrived in Chatham at six o'clock where a number visited the J. B. Snowball Company's mill.

Coming in the Bathurst road the visitors made frequent stops to examine various interesting phases of the forests. Mr. H. P. Webb, forester of the J. B. Snowball Company, had placarded the route calling attention to the effect of insect pests and the different varieties of bark beetles following the budworm. Burns of various ages were also noted showing that the natural reforestation was very satisfactory.

On arriving in Chatham the members of the conference and a number of others were entertained by Mr. and Mrs. J. W. Brankley at a lawn tea. At the close Mayor Hickey welcomed the delegates and expressed the satisfaction of the citizens in having such a body of distinguished men present. Lord Lovat and Mr. Forbes voiced the thanks of the party to all who had contributed to the enjoyment of the best day of the itinerary.

The day's programme was concluded by a pleasant sail on the river on the "Alexandra" which returned to her wharf when the delegates boarded their train. An hour later the journey to St. John commenced.

The members of the conference who came from all parts of the Empire, were headed by Major General Lord Lovat and among them were Sir James Calder, Col. Courthope, M.P., and many other noted men connected with Forest Conservation. The party was accompanied by Col. T. G. Loggie, Deputy Minister of Lands and Mines, A. T. Murchie, Superintendent of Scales, and G. H. Prince, Chief Forester. Hon. C. W. Robinson met the members and continued with them to St. John.

The Dominion Government was represented by E. H. Finlayson, Acting Director of Forestry, and the C. N. R. management had committed the comfort of the delegates to C. K. Howard, General Tourist Agent of the National lines.

Local arrangements for the visit and entertainment of the Conference members were in the hands of Messrs. W. B. and R. A. Snowball of the J. B. Snowball Company, and Mr. J. W. Brankley, General Manager of the Miramichi Lumber Company. Everything possible was done to make the visitors' stay in the Miramichi a pleasant one.

Sir Frederick is Ardent Conservationist

Sir Frederick E. R. Becker, one of the board of directors of the British syndicate who recently purchased the controlling interest of the Chicoutimi pulp mill located at Chicoutimi, in the Quebec Saguenay district, is a firm advocate of the protection of the Canadian forests. Sir Frederick, who arrived from England on August 1st at Quebec by the Canadian Pacific "Empress of Scotland," on business in connection with the Chicoutimi pulp mill, in an interview, gave out the following statement which should be seriously considered at this time when the preservation of the Canadian forests has become a living public question.

Sir Frederick said:—The world position of pulp and paper is very interesting. The United States of America are said to consume 2,500,000 tons of news and printing paper per annum. It is said to increase over a period at the rate of nearly 8% annually. If a nation's consumption of paper is the measure of its culture, it is said that our cousins in the United States certainly lead the world, consuming, as they do, 50 lbs. of newsprint and printing paper per capita per annum. The increase of production in Canada, great as it is, will soon be consumed at this rate. The United States are looking to Scandinavia, Finland, Germany, Czecho-Slovakia and Australia. Large supplies come from each of these countries and supplies are even drawn from England. This increase is not confined to the United States but statistics are natural and reliable there.

A Picturesque Two Storey Home

The prospective home builder who likes a picturesque, low set, two storey house will go far before he will find one better suited to his taste than the one herewith reproduced. It is characteristic perhaps of the English countryside but its quality is such that it would make an attractive picture in any North American suburban or semi-rural section. The house may be built for between \$11,000 and \$13,500 according to estimates of the Home Owners' Service Institute.

Jefferson M. Hamilton of Minneapolis, Minn., designed the house and the plans call for a construction of deep red, face brick contrasted with a roof of bright red cedar shingles. The darkest shades form the diaper pattern of the walls and outline the entrance arch. Pleasing exterior features of the house are its bay window, dormer chimney and graceful roof lines.

As the large glazed porch at the rear of the living room on the ground floor has virtually the appearance and uses of a room, this may really be called a seven room house, so arranged on both floors as to give a wide, spacious effect. The porch may be used to extend the limits of the living room. As it connects directly with the kitchen it makes a pleasant breakfast or dinner room in the winter months.

As the floor plans will show, one goes through the entrance into a vestibule, with the living room on the left and the dining room on the right off each. There is a tiled bath. The house has been so planned as to conserve all possible space and still preserve pleasing interior lines. The house has a cubic contents of approximately 22,000 feet. The ceiling height is eight feet for both stories. Complete plans and specifications may be obtained from the Home Owners' Service Institute, 37 West 39th Street, New York. The house would look well on a corner lot or an inside lot with frontage of fifty feet or more.

The outline of specifications follows:

Masonry—All footings, walls, chimneys and all other masonry not otherwise shown shall be of solid brick. Excavate for the building as shown and one foot outside all foundation walls for all piers, footings, areas, etc. All footings and exterior walls below grade shall be of the hardest burned

brick. All exterior walls burned brick. All exterior brick work above grade shall be laid with face brick, from which those selected for color, markings, or other characteristics desired shall be faced out and the remainder used for backing-up and for all other brick work.

Carpenter Work—All timber shown or required shall be first quality spruce or white pine as indicated; well seasoned, sound and straight grained and free from all defects which would impair the strength. Under floor and roof boardings shall be good quality seven-eighth inch spruce or hemlock boards, mill planed, six to eight inches wide.

Exterior woodwork shall be of first quality cypress. All interior finish throughout the house, except the kitchen, pantry, entry, rear hall and attic rooms, shall be whitewood to paint.

Lathing and Plastering—Walls and ceilings above basement to be plastered two coats. Use metal lath on the ceilings of the living room, dining-room, entry hall and around and under the stairs and stairwell where exposed to view from the main floor. Use a twelve-inch strip bent into the corners of the living room, dining-room and entry hall (to prevent corner cracks).

Sheet Metal Work—Copper or zinc leaders, gutters, down spouts and flashings are recommended.

Painting—all interior finish, except as otherwise specified, shall have three coats and oil paint, colored as directed. Ontario white pine in service portion shall have one coat of shellac and two of varnish.

Electric Work—Wire for lights, base plugs and switches and all openings as per plans. Equipment to meet approval of the National Board of Fire Underwriters, subject to the local board of inspection.

Plumbing—The plumbing contractor shall install a complete plumbing system in the house, including all pipe, fittings, fixtures, and accessories, the water supply from outside and the drainage system as specified.

Heating—A warm-air furnace or steam heating system specified, at option of owner.

Kiln Drying of Lumber in Light of Correct Dry-Kiln Engineering Principles

By Kenneth Redman¹

Originally lumber was dried in a building similar to a smoke house and the European expression of "cured" lumber probably comes down to us due to the similarity in treating hams and wood alike. But the smoke house or hot box process was a slow tedious process. With the coming of the present commercial age, following the Civil War, an attempt was made to speed drying by blowing heated air rapidly across the lumber.

This first attempt at speed was successful only when the drying temperatures were modified. When high temperatures, dry air and a fan were used simultaneously, the result was ruinous, and although some still hold to old fan kilns, usually of the common sense type, the majority of users have discontinued their operation. The old fan kilns still in operation use moderate temperatures only.

The reaction from the fan kiln was to the ventilated type wherein there is a definite, though sluggish inflow of air through a system of ducts, around the lumber and then out a system of exhaust flues. This type, together with the condenser type, a slight modification, came in to vogue along the 90's, and by 1900 was firmly approved. This kiln was successful in drying air-dried lumber and has been uniformly adopted, because it combines the features of circulation and heat in moderation.

The vast quantity production demanded during the World War would not permit of preliminary air seasoning and make it necessary to kiln dry green lumber. The Forest Products Laboratory was ready before hand with its knowledge of the importance of the relative humidity of the air. Therefore, today, the modern kiln emphasizes the importance of three main factors: one, heat; two, humidity; three, circulation.

Basic Principles of Drying

A full, detailed discussion of the principles underlying proper lumber drying is not attempted here as they may be stated in a few sentences. "Do not dry the surface faster than the moisture can transfuse from the center through to the surface." All drying formulas hinge on this fact.

Case hardening, which is nothing more or less than excessively fast surface drying, shrivels the pores of the wood and thereby decreases the rate of flow of moisture through to the surface. Case hardening should be relieved, especially in hardwoods, as soon as possible. The end result of all lumber drying is to get the moisture out uniformly without setting up any stresses in so doing.

In order to accomplish this, the drying power of the air must be known. This is expressed commonly as the moisture deficit or "pick up" of the air and refers to its ability to absorb more moisture. This drying power is determined by obtaining the relative humidity of the air. Relative humidity is simply the ratio of water vapor actually in the air to the maximum amount of vapor it can possibly retain at a given temperature.

The temperature of a kiln should be controlled by an automatic control on the steam line feeding the heating pipes. It is necessary only that there is sufficient radiation to get any desired kiln temperature.

The relative humidity is likewise controlled automatically by the steam spray line. Both temperature and humidity must be uniformly distributed throughout the kiln by the correctly designed and controlled circulation system.

Circulation is Heart

The circulation system of a kiln is the vital point to consider for upon it hinges kiln's ultimate performance. The circulating system carries air of predetermined temperatures and humidities to the surface of the lumber, and if it fails to deliver to all the lumber uniformly, the drying results correspond likewise. Not only must the air move in sufficient volume, but both surfaces of every board must be "wiped" with identical volumes of conditioned air. This leads to the obvious conclusion that the circulation must be in a horizontal plane and parallel with the stickers for all flat piled lumber.

Another point in considering circulation is the distance the air must travel across lumber without being reconditioned. A grain is 1/7000th of a pound and one cubic foot of air in picking up one grain of water cools approximately 7 deg. F. It is obvious that if a cubic foot of air is forced to pick up several grains that its drying power is much less towards the end of its journey than at the start. Commercially it is possible to reduce this air travel to 3½ feet in standard

size kilns and this feature alone is accountable for great saving in drying time. Furthermore, the high quality of lumber may be maintained as any given cubic foot of air is not overloaded with work to be done and therefore the relative humidity of the entering air may be maintained at a high point as long as the circulation is ample. Thus, the more often the air is turned over, the less work is required by any one given cubic foot of air and the drying becomes more uniform, but if the circulation is sluggish, so that any cubic foot of air must absorb several grains of moisture, its relative humidity must be low at the start in order that it can do any drying at all at the end of its travel.

The last feature to be considered is to eliminate all waste effort. By this I mean it is of no avail to move air around in the kiln indiscriminately—the air should wipe across the surfaces of the boards only—all other air movement is wasted. To insure this the air should enter the center of the lumber pile in an inverted "V" shaped flue and flow horizontally out to the sides of the pile and thence directly out of the kiln.

Summary of Kiln Design

Thus the modern kiln should be automatically controlled as to temperature and humidity.

The circulation should be independent of internal atmospheric changes, i. e., mechanically forced.

The air travel should be short—3½ feet is plenty. All air movement, except through the lumber pile, should be eliminated. Any mechanical means taken to secure the above conditions is bound to bring results beyond that heretofore obtained. And it is interesting to note that this is a combination of the good features of kiln design nearly 75 years old with the elimination of temperature conditions now known to be harmful to successful operation.

But the best of kiln design is of no avail unless drying conditions are applied to the lumber intelligently. It is wholly possible today to accurately determine the moisture content in the shell or center of the lumber; to determine if it is case hardened or not and to observe the tendency to check honeycomb, etc.

Given a correctly designed kiln, that is machine-like in its operation and in which all factors are under control, it is of prime importance to observe and test the lumber frequently and to tabulate and record the results obtained under varying conditions.

Only by so doing can one in time predict at all closely what conditions are best to use as lumber of course varies greatly in texture and density, but given a correctly designed kiln the operator who knows his job can secure far superior results than in a kiln not incorporating the foregoing features. It is analagous to a high grade musical instrument yielding beautiful harmonies when under the touch of a master, but in the hands of a novice only discords result.

To emphasize still further let me repeat the remarks of Mr. Casseleer, of the Steinway Piano Co., before the Forest Products Section of the A. S. M. E. in discussing kilns. He prefaced his remark by stating his company operated almost all kinds of kilns and that he had come to agree with the sick man that "Most any doctor would do but get me a good-looking nurse." By all means get a good nurse but don't make him or her play with a "sick kiln. Properly K. D. stock can cure many a "sick" company.

There seems to be an ambition on the part of many to learn the "tricks of the trade" rather than the trade itself.

The many friends of W. E. Bigwood, of Toronto, president of Graves, Bigwood & Co., who was taken rather seriously ill at his summer home Byng Inlet, Ont., recently, will be pleased to learn that he is making satisfactory progress towards recovery.

Be A Salesman and Not A Clerk

Don't be a clerk and sell lumber to two-legged forms that drop in to buy.

Be a SALESMAN, and sell building IDEAS to thinking individuals.

Learn something about the building business every day, so that you can advise and assist your customers.

Keep away from the matter of price, if possible, until you have sold the idea.

Come down to the office every morning with the resolution in your heart that you will do some real selling before the day is over.

Be a better salesman every night than you were the night before.

And in a year you won't know your selling self.—Gulf Coast Lumberman.

Dealers Will Hold Better-Yard Competition

Southwestern Ontario Yardmen Have Interesting Session at West Lorne and Discuss Several Matters—Visit Paid to Busy Hardwood Flooring Plant

One of the most successful and enjoyable gatherings of the Southwestern Ontario Retail Lumber Dealers' Association was held recently at West Lorne, Elgin County, when over thirty members were present and, on the invitation of the Seaman, Kent Co. visited their busy factory in that progressive village. At 2 o'clock the guests were shown through all departments of the industry which is running at capacity and is known as the "oak flooring plant" of the firm. Every operation was followed with the greatest interest and a short address was delivered by E. H. Stanners, sales manager, on what the company has been doing to assist the dealer by a wide and diversified advertising campaign. Mr. Frank Kent, president of the company, Mr. T. A. Bissell, secretary-treasurer, and other officials were on hand to extend greetings. After a tour of the factory, which is the second largest in the chain of plants of the company, turns out 166,274 lineal feet of flooring daily and is equipped with three machines of the latest type, favorable remarks were made upon the well-lighted and economically arranged features of the buildings.

The retailers later adjourned to the village town hall where a business session of over an hour was held. A number of interesting matters in regard to the business outlook, trade ethics, shipping and sales conditions, etc., were discussed, and a profitable debate took place. George N. Kernohan, of London, president of the S.W.O.R.-L.D.A., presided and B. F. Clarke, of Glencoe, secretary, outlined the proposed contest in the matter of clean and well-kept yards and better and more efficient fire protection. This matter has been under review for some time and the preliminaries have been well arranged.

Fire Protection and Better Yard Contest

Mr. Clarke outlined the following conditions as the basis of the competition, and the same was adopted. They are:

Having a clean tidy lumber yard and planing mill will go a long way toward fire protection, and for this reason we have coupled the two together.

Anyone who has been over the different lumber yards in this district knows that there is room for a lot of improvement, and the idea of this contest is to stimulate interest in cleaner planing mills and lumber yards and to lessen the fire hazard.

One lumber yard and planing mill in a small town has been successful in reducing the insurance rate from 3-1/2 to \$1.87 while we know of others that companies are very shy about taking the risk at all.

A very little time spent each day will keep a plant in the pink of condition, it will not only save itself many times over in the lumber that you keep straight but it gives the men a pride in their work.

Nothing will sell lumber better than a well-kept yard, and from all angles this contest should appeal to all good business men and will create a little friendly rivalry which will do us all good.

Judging will be done on points and a certificate will be issued to each member each year as follows:—

Condition of planing mill (if any)

- " " yard
- " " piles
- " " alleys
- " " stables and horses
- " " trucks (if any)

Condition of planing mill:

Are floors kept clean of shavings, water barrels filled, if used, pails in their place, fire hose in good condition.

Condition of yard:

Are pile bottoms kept up, general appearance.

Condition of piles:

Are piles kept straight, covered where necessary, no lumber thrown around?

Condition of alleys:

Are weeds kept out, no rubbish around.

Condition of stables and horses:

Are stables clean, horses well cared for, harness cleaned?

Condition of trucks:

Do these look well cared for?

It was felt that it was rather late this year to inaugurate the competition but now that the provisions of the contest are known, every dealer in the district should get to work and do what he can to win the award in 1924.

With respect to whom should make the awards, several suggestions were proffered and it was finally decided that Secretary Clarke should get in touch with the Board of Underwriters and see if their inspectors, which make rounds of the yards at stated periods during the year, would consent to act as referees in the contest. A certain number of points would be allowed for the best-kept yard and also for effective fire protection. It is likely that final judgment will be

Hugh McKillop, M. P., West Lorne, Ont., who presided at the evening dinner tendered the visitors

rendered after two or three visits. Everyone present was of the opinion that such a contest would prove beneficial and tend to create a healthy rivalry among the yardmen.

In the matter of neatness, appearance, safety, reduction of insurance rates, etc., further details in reference to the same will be taken up at the next meeting of the Southwestern Ontario Association which will likely be held in Glencoe in September at a date to be fixed upon.

Social Evening Spent on Lawn

After the business proceedings the members had the pleasure of witnessing a County League Baseball match between Dutton and West Lorne in which the latter won with conspicuous ease. There was some good ball playing, however, and brilliant stunts were pulled off on the part of not a few members of the contending nines.

An open-air banquet was tendered the visitors by the Seaman, Kent Co., and a most enjoyable time was spent. The setting of the supper and social festivities was on the grounds of Wm. Merritt. The long rows of tables were artistically decorated with flowers and plants while the electric effects were very attractive. Numerous Chinese lanterns were strewn throughout the grounds while flags and streamers added to the gayety of the scene, the many good things being provided by the ladies of the Women's Institute of West Elgin. Among the delicacies may be mentioned: Fresh Lake Erie ciscoe, West Lorne green peas, (the compliments of the West Lorne Canning Co.) roast young pork, raspberry pie, cabbage salad, ice cream, etc.

After the wants of the inner man had been well taken care of, several selections were sung by the West Lorne Male Quartette. Hugh C. McKillop, M. P., of West Lorne, who is widely known in lumbering circles, made a popular and efficient chairman. He welcomed the members of the Southwestern Ontario Lumber Dealers' Association and spoke of the importance of the industry to the vil-

lage, how it had operated steadily with an ever-increasing output and was an important factor in the progress of West Lorne. Mr. McKillop paid a personal tribute to Mr. Kent for his fair-mindedness, integrity and go-ahead spirit and said the relations between the Seaman, Kent Co. and the municipal authorities had always been of a most pleasant character.

Among those who delivered addresses were: Robert Irwin, superintendent of the West Lorne plant; T. E. MacKenzie, salesman of Seaman, Kent Co.; G. T. Bissell, secretary-treasurer of the company; E. H. Stanners, sales manager; Arthur Petherick, councillor of West Lorne; Wm. Oldfield, Editor Lashbrook, of the "Elgin Sun"; M. McKillop and J. B. Ferguson, representing the West Lorne Board of Trade; Horace Boulton, of Toronto, secretary of the Ontario Retail Lumber Dealers' Association; G. B. VanBlaricom, of Toronto, editor of the "Canada Lumberman," B. F. Clarke, of Glencoe, secretary Southwestern Ontario Retail Lumber Dealers' Association; George H. Belton, of London; John A. McKillop, West Lorne; and Mrs. Ferguson, president of the Women's Institute of West Elgin and others. A hearty vote of thanks was tendered the ladies.

It was moved by Mr. Kernohan, of London, and seconded by Mr. R. H. Smith, of London, that a cordial vote of thanks be tendered the Seaman, Kent Co., for their hospitality and the splendid entertainment that had been provided during the afternoon and evening.

This was carried amid hearty applause and was suitably acknowledged by Frank Kent, president of the company, who spoke of the pleasure it afforded his firm to welcome such a large and representative gathering, and he trusted that their visit to the plant had been profitable and instructive. He also paid a tribute to West Lorne and the harmonious relations that had existed between the citizens, the council and the company since the location of the flooring plant there some three years ago.

How Ottawa Plant Prevents Accidents

The important matter of preventing accidents in the mill is taken very seriously at the plant of James Davidson's Sons, Ottawa, and their efforts in this direction are commendable. Those in the trade who are in a similar position as the Ottawa firm will read the following description of the care they give this matter.

"We have here in Ottawa a very extensive plant and it takes constant vigilance and supervision to keep everything running smoothly all the time and keep all machines properly guarded, and at the same time not interfere with the production of the factory.

It has been very difficult to get workmen to see or realize that the safety appliances on the machines are put there for their own protection and at some cost to their employer. We insist very strongly that the foreman of each department sees to it that the guards and safety devices are in working order and in their respective positions at all times, and in case of one of these guards or safety devices being out of order they must report to the superintendent, who has this matter under his supervision. We also see to it that machines are kept in good repair and that belt covers, gears, etc., are guarded in the best possible way. In this way we have contributed to the increased safety of our mill hands.

In spite of all this however, accidents will happen, because it is impossible to safeguard a workman against his own errors, mistaken methods, and in many instances—carelessness.

An instance of a workman's error came under my notice the latter part of last year. A bench hand had some boards which were required to be cut to certain lengths. He took this material to what is commonly called a combination machine. This machine has two arbors, which means that a rip-saw, also a cross-cut saw is in position ready for use at any time they are required. The workman proceeded to square one end in the usual manner by using the cut-off rest. Then, instead of adjusting the stop on said rest, he set the rip-saw guide the necessary distance from the cut-off saw and started to cut the other end by sliding the previously cut end against the guide mentioned. He cut the first one all right, but the second one was kicked back so violently against his mid-section as to put him out of commission for several weeks.

Foolhardiness, carelessness and lack of concentration on the work in hand are some of the causes of accidents to the more experienced workmen. Carelessness or fumbling in picking up stock from behind the saw causes many accidents. Short feeding produces like results. In both cases stock is thrown back by coming in contact with the back or top of saw and the operator is very often in position to act as an unwilling backstop. Severe injury from this cause is very common and fatal accidents are not unknown. The careless disposition of fingers while operating circular saws and buzz planers is responsible for most of the mishaps on these machines.

While it is right and proper that the unfortunate victims of such accidents be given the benefit of the doubt, still it is to be feared in many cases that honest confession would reveal the fact that at

the moment the accident occurred their thoughts were on something far removed from where they were most needed.

We also have a very efficient first aid station. In case of accident the workmen is given first aid and is immediately taken to his own doctor or to one near by. We have one of our motor cars in readiness at all times in case of serious accidents.

We have been very fortunate of late years in not having a single dangerous accident. We think our very careful attention to machine guards and a hearty co-operation with the Workmen's Compensation Inspectors have helped us to keep accidents down to a minimum.

We also wish to express our appreciation of these inspectors. We have always found them to be very agreeable and instructive agents. With the assistance of their practical instructions and suggestions we have eliminated most of our accidents and we are of the opinion that most manufacturers are willing to comply with their requests. We would therefore urge these inspectors to continue to give us the benefit of their common sense ideas without asking for something which is superfluous or unreasonable."

Buyers Door Co. Hold Jolly Picnic

The employees of the Buyer's Door & Manufacturing Co. Ltd., Toronto, held a picnic at Woodbridge on July 21, when a most enjoyable time was experienced by the employees, their families and friends. The weatherman was on his best behaviour, and thanks to the splendid work of the committee and their assistants everything was a complete success.

On arrival at the grounds a baseball match was held between the single and married men, which was won by the single men, but only after a close contest in which an extra innings was necessary to decide the issue. At one o'clock a delightful dinner was served at which 130 sat down. Afterwards the sports took place, there being races for all, from the "tiny tots" to the married people. These

J. S. Bond, Toronto,
Who distributed the prizes to the winners

contests were so keenly contested that there were dead heats in some events. The ladies' balloon race and nail driving contest, sack race and three-legged race caused much spirited competition.

The tug-of-war between teams from the upstairs shop and the lower mill, was won by the upstairs shop. After the races a soccer football combat between the married and single men took place, the losers to stand the victors a melon feed. The single men ate the melons, but the score was only 1-0, so the single chaps had to work hard for their victory.

During the afternoon the president, Mr. A. A. Wright, Mrs. Wright and Miss Wright were interested spectators of the sports; in fact Miss Wright took part in the young ladies' race. The prizes were distributed after every race by the vice-president, Mr. J. S. Bond, who, with Mrs. Bond and friends, enjoyed the events of the afternoon and the excellent supper provided.

At 5.30 tea was served at which 175 sat down to another splendid meal and to which all did ample justice. A vote of thanks was moved to the committee for the splendid and untiring manner in which they discharged their arduous duties, as the success of this initial picnic was due to their good work in organization and preparation. They received three well merited cheers and a tiger. So successful was the picnic that expressions on all sides were heard that it should be an annual event.

Factors in Building up Export Trade

Trade commissioners and consuls have emphasized reliability as one of the most essential points in building up an export trade. Foreign buyers insist not only on getting goods suitable for their customers but also demand that repeat orders shall be filled without variation. They will give business to those firms who will respect both the letter and the spirit of contracts.

If pine is ordered, they do not want something else, and they require the goods to be manufactured for the requirements of the particular market. Many permanent buyers have been lost because exporters tried to substitute one class of goods for those ordered. In this connection a delegate to the Imperial Forestry Conference relates an incident which bears its own moral. He is interested in the lumber trade and, prior to the war placed a contract with a British firm. That contract was partly filled when the war put an end to the shipments to the colony in which he resides. He, therefore, contracted with a firm of another country—not Canada. The goods sent were quite different to those ordered, were, in fact, unsuitable and resulted in a considerable loss to the buyer.

When the war was over the British firm, who had obtained the original contract, not only shipped the balance of the goods but charged for them at the pre-war price, notwithstanding that values had advanced to an appreciable extent. The result is that the exporting house has made a permanent customer and the other concern has not obtained a cent's worth of business beyond that which it failed to fill satisfactorily.

Incidentally, the representative to the Imperial Forestry Conference referred to stated that he tried to introduce Canadian spruce but his customers preferred pine and were prepared to pay the higher price. It was, he said, almost impossible to change customers' opinions—prejudices if you like—they were accustomed to use certain woods and almost invariably refused to purchase other kinds.

Larger Expenditure for Fire Protection

The forest policy of the Quebec Government has lately been the subject of caustic criticism, the chief allegations being that the Government is niggardly in the expenditure on fire prevention, the main burden of which is placed on the shoulders of the limit holders; that violations of the law are not adequately punished and that the colonization policy is not calculated to preserve the forests.

At the banquet given to the delegates of the Imperial Forestry Conference at Quebec, Hon. Mr. Taschereau, the Premier, made a vigorous defence of the Government policy. He recalled the meas-

ures passed to group settlers and keep them away from the lumber limits; the establishment of a forestry school; the taking of a forest inventory, in order to control the cut so that only the annual growth will be removed from the limit, thus making it perpetual; and the facility of the driving of logs. He added: "We cannot and will not sacrifice colonization to timber operations. Both should progress hand-in-hand. Limit holders and settlers are not and must not be enemies. There is room enough in Quebec for these two great assets, and our aim is to establish between them an entente cordiale that is possible and practicable. Such an entente is the interest of both."

While giving credit to the Government for their policy, it is clear that in regard to fire prevention, a great deal remains to be done. The fact, that year after year enormous destruction goes on, is evidence that the measures taken are not adequate and that the situation will have to be faced. Mr. Taschereau stated that the personnel of the forestry service has been more than doubled in three years and that in 1922 the Government spent \$318,000 in fighting fires. The limit holders are also spending large sums, through the forest protective associations, and in 1922 the members of the St. Maurice Forest Protective Association were assessed \$89,819.

Where is the additional money required to come from? In 1922 the income of the Lands and Forests Department was over \$4,000,000 (it was a little less in the fiscal year of 1923). Having regard to this large sum, mainly raised from the limit holders for value received, the Government might surely devote an increased grant to the fire prevention side of the work of the Department. It is no use expending money on artificial reforestation if the trees are to be later destroyed by fire. The members of the Provincial Government have expressed appreciation of the menace of these fires—will the Government translate this appreciation into a larger expenditure in saving the forests? It may not be possible to eliminate fires but it is possible to take greater precautions. While the future may not be as black as some critics suggest, it is serious enough to call for greater preventative measures.

Central Committee on Lumber Standards

Last January at the annual gathering of the Ontario Retail Lumber Dealers Association at Windsor, the activities of the Central Committee on Lumber Standards in the United States were discussed briefly. It was decided at the convention that the Association would follow the progress of the Central Committee. Since that date much investigation work has been done by the Committee which should be of interest to retail lumber merchants, architects and builders.

Without attempting to cover the whole field of progress that has been made to date by the Central Committee on Lumber Standards and the co-operating Consulting Committee on Lumber Standards, it is important to note that standard widths and thicknesses for yard lumber tentatively have already been determined. This action is described as a distinct step in progress towards the establishing of sound and simplified national standards for the manufacture and sale of lumber. Another subject in which the building public is vitally interested is that of odd and short lengths of lumber. This important question is now under consideration by the Practical Size investigating Committee—a subsidiary of the Consulting Committee.

In explanation of the meaning of odd and short lengths of lumber it should be said that standard sizes of lumber, following long established custom, are in even feet lengths, beginning with eight feet and running up as high as sixteen. Odd lengths are, of course, the intermediate lengths of 7, 9, 11, 13 and 15 feet. A varying amount of material is wasted in conforming to even lengths as, owing to defects and the taper of the log, odd lengths often result in sawing but have to be cut to meet standard size requirements. As for short lengths, it is plain for similar reasons that if the manufacturer makes no boards under eight feet in length much of the material is also wasted. In addition to the manufacturing wastes in both odd and short lengths it is notorious that there are huge carpentering wastes in cutting standard boards to meet building requirements where short lengths would be much more economical. It has been calculated roughly that the waste of good lumber material because of the custom of not using odd and short lengths, is as much as ten or fifteen per cent. of the lumber content of the log. In these days of dwindling forest supplies such an item is well worth saving both from the consumers economy point of view and the general conservation of forest resources.

According to the architects of the National Lumber Manufacturers Association the use of odd and short lengths of lumber of all kinds is a conservation measure in which all those who have at heart the best interests of timber conservation—lumber manufacturers, dealers and consumers—are concerned. Lumber manufacturers are practically interested in the inclusion of more odd and short lengths of lumber in shipments because this permits of more economical log utilization. It is apparent also that a larger proportion of odd and

short lengths may suit the convenience, as well as the purse, of many consumers of lumber.

However, some wholesalers, retailers and consumers object to odd and short lengths. They urge that these lengths increase the cost of handling, necessitate larger storage space and more capital. Other reasons given for their opposition are that the inclusion of a large proportion of odd and short lengths in their stocks will increase overhead costs and result in a decreased turnover of stock. It seems, therefore, that the problem is not one primarily of manufacturing, but one of marketing.

If contractors, architects and consumers, generally, demand long and short lengths the dealers will naturally meet their requirements. It is, therefore, desirable to ascertain to what extent the builder can advantageously use odd and short lengths. The Practical Size Committee desires the co-operation of builders and dealers in determining to just what extent the public really does require odd and short lengths and the percentage of them that may be used in average construction as compared with the total amount used.

Survey of Lumber and Building Costs

Years ago, when the "high cost of living" was a bagatelle compared to what it is now, the late J. J. Hill said, that after all the problem was not the high cost of living, but the cost of living high. Studies of the building situation in the various parts of the country indicate strongly—according to a review by the National Lumber Manufacturers Association—that a substantial proportion of the increased cost of construction nowadays as compared with that of ten years ago, is due not so much to the high cost of materials and labor as to the cost of luxuries in both.

The New Jersey Lumbermen's Association, after a survey of comparative building costs in that state, points out that there really is no parallel between the cost of a dwelling house now and of the corresponding house ten years ago. "As a matter of fact," says that Association, "such comparison is not possible because an entirely different type of house is being constructed at the present time. You will find in the most unpretentious house that is being built today many or all of the following: sun parlor, window seats, open fireplace, plate rail and panels, kitchen cabinet, expensive electric and bath-room fixtures, combination ranges, beam ceilings, built-in bookcases, colonnades, breakfast nook, oak flooring, hardwood trim. All or many of these items were considered luxuries or fixtures even ten years ago, and were not considered a part of the construction cost; and yet today they are considered to be necessary and add very materially to the construction cost.

However, there has not been such a change in housing standards in the last four or five years as to make comparisons of costs impossible. The New Jersey Association points out that when the actual cost of lumber entering into the construction of a house is considered in relation to the total cost and there is further taken into consideration the marked reduction in lumber prices since the spring of 1920, there is no justification for the cancellation of postponement of home building projects. The Association found that the lumber for a house bill, which cost \$1,775 at Atlantic City in April 1920, cost in April of this year, \$1,325. Lumber for a typical small house bill in Newark, which amounted to \$1,201 in 1920, now amounts to \$877. Altogether the Association compared prices in 1920 and 1923 on 33 identical bills in as many different cities. The smallest showing in favor of 1923 was a reduction of 17 per cent. at Perth Amboy and the most favorable showing was 34 per cent. at Rutherford; the average was 27.4 per cent. The New Jersey Association puts the lumber cost of a frame house at less than 30 per cent of the whole.

In Wisconsin a lumber dealer at Fox Lake finds that a house there, which cost \$7,828 in 1920 can now be built for \$5,278—a complete home with seven rooms and bath, front and rear porches. The lumber cost of this house in 1920 was \$3,600, replaceable now for \$2,450. Comparative lumber bills for May 1920 and May 1923 were estimated by 39 lumber dealers in as many different Wisconsin cities and villages, with the reduction in favor of 1923 ranging from 10 per cent. to 33 per cent.

The Northwestern Lumbermen's Association, of Minneapolis, had ten different bills in as many different cities and towns in Minnesota, Iowa and South Dakota, figured for May 1920 and May 1923. The estimates for the latter year average 26.4 lower than for the former year.

The Cleveland Board of Lumber Dealers calculates that a small house of six rooms requires 17,820 feet of lumber. In March 1920, this amount of lumber cost \$2,023.48. In May 1923 (and it would be somewhat less today) it cost \$1,370—a decline of \$653.48, or about 32 per cent. The total cost of this house—22 x 26, full two stories, with slate roof, furnace and wash trays, etc.—was \$6,012 in 1920 and \$4,940.05 in 1923.

In fairness it should be pointed out that back in 1914 the lumber in this house would have cost only \$649, but it is not to be expected

that such a house will ever again be built in America at such a lumber cost. In the first place the general average of all building materials is about twice as high in price as it was nine years ago and labor about the same. No economists hold that the general price level of nine years ago will ever be regained—at least not in this generation. The general average of all commodities is now about 50 per cent. higher than in 1914, but with respect to lumber the situation is unique, for, while its price fluctuates from year to year according to varying conditions of supply and demand, its inevitable general trend is toward higher prices over a period of years.

This is chiefly due to the facts that the basic supply—the forests, are ever dwindling in the face of increasing population—and that the main lumber supplies are now many hundreds, even thousands, of miles distant from the centres of consumption. The increasing length of lumber hauls, as well as the increasing railway rates in recent years, have been such that the cost of transportation of lumber is now, sometimes, more than the entire delivered cost not many years ago.

The figures quoted above show that lumber is retailing, on the average, at around 25 to 35 per cent under the peak prices of 1920. While no one is competent to look into the future and say that lumber may not go lower, yet, in view of the increasing costs of lumber production and transportation, it is considered doubtful whether lumber will ever again in this country descend to the level of the spring of 1919, when the bill for the Cleveland small house amounted to \$1,087. Should it do so the saving would be about \$300 in a total cost of \$4,940 at present prices. This raises the question of whether a person desiring and being in a position to build now, cares to defer indefinitely the occupation and enjoyment of a home of his own for the sake of gambling on a possible saving of about 7 per cent. of the total cost of the house, and at the same time taking the risk that present prices are at the bottom of a new rise.

Lumbermen Want Present Dues Continued

A delegation of prominent Quebec timber limit holders waited on the Provincial Cabinet recently to urge the maintenance of the 1918 tariff as stumpage dues.

It was represented to the Cabinet that last year the enforcement of the 1920 tariff had been delayed for another year on the conditions that lumber camps would be operated in full swing, which had been done, with the result that there had been unusual activity recorded. The lumbermen had at the time taken a risk but had kept to their promise and even now camps were still scenes of great activity. The result was that after undertaking those risks the limits holders were now menaced once more of falling under the 1920 tariff of stumpage dues which was over 20 per cent. above the present one. Conditions had only slightly improved, it was pointed out, and the rise in wages contributed to a great extent in warranting the limit holders to ask for the continuance of the 1918 tariff.

Premier Taschereau and the other ministers present decided to study the matter and the limits holders will be given an answer later. The delegation included the following lumbermen:

Sir Henry Egan, Hon. George Bryson, Brigadier General White, Messrs. Gerard Power, Dan McLachlin, John Black, E. A. Dunlop, D. C. Champoux, R. F. Grant, Fraure G. E. Gillis, W. Grant, Jack Price, F. Hall, R. O. Sweezey, J. Hamilton, J. W. Smith, S. J. Fisher, John Power, H. Nesbitt, A. Seburn.

The Law of Supply and Demand

It seemed that when Rastus and Sam died they took different routes, so when the latter got to heaven he called Rastus on the 'phone.

"Rastus," he said, "how yo' like it down thar?"

"Oh, boy! Dis here is some place," replied Rastus. "All we have to do is to wear a red suit wid horns, an' ebery now an' den shovel some coal on de fire. We don't work no more dan two hours out ob de twenty-four down here. But tell me, Sam, how is it with you up yonder?"

"Mah goodness! We has to get up at fo' o'clock in de mawnin' an gathah in de stahs; den we has to haul in de moon and hang out de sun. De we has ter roll de clouds aroun' all day long."

"But, Sam, how comes it yo' has ter work so hard?"

"Well, to tell de truf, Rastus, we's kin' o' short of help up here."

The Latest Light Upon the Federal Sales Tax

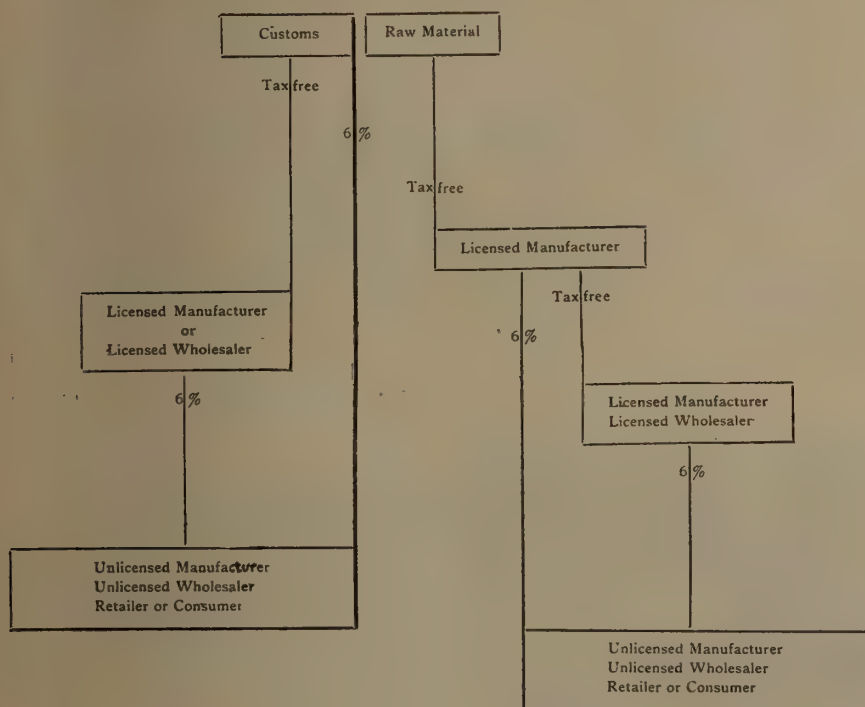

The Government have published the Act governing the Sales Tax, effective January 1, 1924. The regulations under which the tax will be collected will be shortly issued by the Department of Customs and Excise.

The Montreal Board of Trade has printed a concise summary of the principal provisions of the Act. The following are the definitions of those affected:

Licensed Manufacturer.—A manufacturer or producer who manufactures or produces goods to the value of \$10,000 or more during any fiscal year ending 31st March. It is necessary for every such manufacturer or producer to take out an annual license. The penalty for neglecting to do so is a sum not exceeding \$1,000.

Licensed Wholesaler.—A wholesaler or jobber who sells not less than 50% of his total sales to a licensed manufacturer or producer to be used in, wrought into, or attached to, articles to be manufactured or produced for sale. A wholesaler or jobber may be granted a license on application to the Minister of Customs. Upon a wholesaler or jobber applying for a license it will be necessary for him to give security by bond of an incorporated guarantee company, whose bonds are acceptable to the Dominion Government, or by depositing Dominion of Canada bonds for an amount not less than twice the amount of the Sales Tax computed for a three months' period of total sales, such bond being security that the wholesaler or jobber shall keep adequate books or accounts and shall render true

Diagram Showing, Generally, the Operation of Sales Tax
Effective 1st, January, 1924

statements of sales to licensed manufacturers or producers and others.

Unlicensed Manufacturer.—One who does not manufacture or produce goods to the value of \$10,000 during any fiscal year.

Unlicensed Wholesaler.—One who does not sell 50% of his annual sales to a licensed manufacturer or who does not take out a license.

Sale Price.—The price before Sales Tax is added thereto.

The summary gives an outline of the application of the Tax:

A Sales Tax of 6% is imposed on the sale price of all goods produced or manufactured in Canada, including the amount of Excise Duties when the goods are sold in bond, payable at the time of sale, and on the duty paid value of all importations, payable at the time when taken out of warehouse. The Sales Tax shall not apply:

- On goods exported.
- On goods sold by one licensed manufacturer to another licensed manufacturer, or to a licensed wholesaler.
- On goods imported by a licensed manufacturer or by a licensed wholesaler.
- On goods, principally foodstuffs, which are exempted from

the Sales Tax now in force and on the following additional items:—Manuscript; Raw Furs; Wool, not further prepared than washed; Drain Tiles for agricultural purposes; Syrups; enumerated in Customs Tariff, Item No. 140.

When goods are sold by a licensed manufacturer or a licensed wholesaler to an unlicensed wholesaler or jobber, the purchaser shall be furnished with a written invoice of the goods sold, which invoice shall state separately the amount of the Sales Tax.

When goods are sold by an unlicensed wholesaler or jobber to a licensed manufacturer, the purchaser shall be furnished with a written invoice which shall state separately the amount of the Sales Tax.

Refunds.—A refund or deduction of the amount of the Sales Tax may, with the consent of the wholesaler, jobber or dealer, be granted to a licensed manufacturer or producer on goods purchased from a wholesaler, jobber or other dealer if such goods are to be used in, wrought into, or attached to articles manufactured or produced for sale by a licensed manufacturer and which are articles subject to the Tax.

A refund of the amount of the Sales Tax may be granted to a licensed manufacturer or a licensed wholesaler in respect of goods which he has on hand on the first day of January, 1924, if such goods have been, or are to be used in, wrought into, or attached to articles to be manufactured or produced for sale and which are articles subject to the Sales Tax, such deduction not to exceed the amount actually paid by the said manufacturer or wholesaler, no deduction to be allowed in respect of such goods not accounted for prior to the thirty-first day of March, 1924. Claims for such deduction must be presented to the Department of Customs and Excise with complete evidence on or before the thirtieth day of June, 1924, otherwise same shall be rejected.

When goods are imported free of duty there may be granted a refund not exceeding 25 per cent. of the Sales Tax on similar goods after having shown to the Minister of Customs that such Canadian goods are at a disadvantage in competition with goods imported free of duty.

Deductions.—A deduction from the Sales Tax may be granted in respect of goods sold at a fixed price by bona fide contract and sale made before the twelfth day of March, 1923, and still in force at time of delivery of goods, provided that such deduction shall not exceed the difference between the amount of the Sales Tax calculated at the rate in force on the eleventh day of May, 1923, of the amount of the Sales Tax paid or to be payable under the present Act. No such deduction shall be made in respect of goods delivered after the thirty-first day of March, 1924. Claims for such deductions must be presented to the Department of Customs and Excise with complete evidence before the thirtieth day of June, 1924, otherwise the same shall be rejected.

Was Crown Lands Pulpwood Exported?

The story from the Quebec correspondent, in the last issue of the "Canada Lumberman" about a pulpwood dealer in Quebec, who in the course of an interview, made the statement that pulpwood was cut from the Crown Lands by farmers from land adjacent to their properties, on Government permits, and shipped to the United States, etc., by Quebec brokers who had purchased the said wood from the farmers and shipped same to the United States, was the subject of considerable comment in Quebec official circles. On being interviewed by a representative of the "Quebec Chronicle," officials emphatically denied that permits were given to settlers to cut pulpwood from Crown Lands adjoining their lots. Notwithstanding this denial, the said permits exist and are in possession of the brokerage firm who gave out the information. It may be that the permits were forged or surreptitiously obtained, and should the government officials doubt the authenticity of the source of information, an investigation would soon settle the question.

Lumber cutting operations have been resumed at the old C. F. R. mill at Port Moody, B. C., after a shut down of over four years. The mill changed hands recently and is now known as the Port Moody Lumber Co. A large gang of men started work three months ago to get the mill in shape. A new smoke stack, 140 feet high, has been erected, also a new burner of the largest and latest type. A new boiler house and an engine room have also been built. The total cost of repairs and alterations was about \$150,000. The mill has a capacity of 150,000 board feet per day, and employs about 160 men.

Prominent Sherbrooke Lumberman Passes

The late B. C. Howard, Sherbrooke, Q.

Another prominent member of the lumber industry of Eastern Canada passed away recently in the person of B. C. Howard, head of the B. C. Howard Co., Limited, of Sherbrooke, P.Q. The late Mr. Howard was in his 58th year and was apparently in good health up to the time of his sudden demise which took place in his office. Mr. Howard was one of the leading lumbermen in Quebec. Besides being head of the lumber firm which bears his name, for many years established in Sherbrooke, he was vice-president of the English Lumber Co., which was formed about eight months ago at Lake Frontier, Que. Mr. Howard was a public spirited citizen and enjoyed the confidence and respect of the people of his city, serving nine years as alderman. His presence will be keenly missed by his friends and the people of Sherbrooke in general as he was a man who derived much satisfaction in working for the welfare of his fellow man. This phase of his active career was manifested in his position as president of the Sherbrooke Hospital, an institution in which he was keenly interested. He also donated to the Y.W.C.A. of that city its fine home and was always ready to offer his services whenever there was an opportunity to make life a little sweeter for the unfortunate or helpless. He leaves to mourn his departure his wife and one son, Charles B. Howard, who was associated with him in his lumber business.

Mr. Hawkins is Leaving for The Old Country

Frank Hawkins, of Ottawa, who for the past 15 years has been secretary of the Canadian Lumbermen's Association, will conclude his services with that organization at the end of the present month and sail on September 1st from Montreal on an extended trip to the Old Country. He will be accompanied by Mrs. Hawkins and they will spend several months abroad. Mr. Hawkins, who recently resigned from the secretaryship of the C.L.A., has not been in good health for some time and has been advised by his physicians that a long rest and period of quiet would do much to restore him.

R. L. Sargent, who has been transportation manager of the C.L.A. for the past two years, succeeds Mr. Hawkins as secretary of the Association, and enters upon his new duties on September 1st.

Splendid Course in Woodworking Industry

Of interest to the woodworking trade is the new vocational school that is being erected by the Kitchener and Waterloo Collegiate Institute Board in connection with the new collegiate which will be ready by September 1. Among the departments in the new school will be one for cabinet making and woodworking. While it is not the intention to turn out mechanics, yet the course is expected to be a benefit to the industry in the Twin Cities, although some years will probably elapse before concrete results can be expected, the first stage, as in the case of other courses in the school, being largely experimental and a breaking of ground.

Vocational training among other things has for its object the enabling of young men to find their proper place in life and if the course in cabinet making and wood working will make it possible to reveal latent talent for this work, not only will the youths but also the industry generally benefit. While there is no intention or hope to develop full-fledged artisans or to replace the system of apprenticeship by industrial training, yet it is believed that the course will provide an incentive to young men and contribute to the development of future mechanics.

The collegiate board assisted by the vocational committee has received assistance from the furniture manufacturers of the community in framing the course and deciding upon the equipment that is to be installed. Among the furniture men who have been identified with the work to date are E. O. Weber, (of the E. O. Weber Furniture Co.), chairman of the board; J. H. Baetz, (of the Anthes-Baetz Furniture Co.), chairman of the vocational committee; and S. H. Maxwell, of (Malcolm and Hill), chairman of the wood-working

sub-committee. The department will be practical and it is the intention to provide a full course in the industry in the course of a few years. One feature that will be taken advantage of later is the chemical plant which can be used for the teaching of the chemistry of finishing. A dry kiln will also be provided as soon as the course has been put on a permanent basis.

As in the case of the other courses, the cabinet making and woodworking one will be divided into several divisions to meet the requirements of the Adolescent act of the province. One division will be for youths who are working and will attend part time-day classes. Another will be for young men who are at the vocational school all day and have not yet sought a means of earning a livelihood and still another will be a night course for adults which, it is expected, will be popular with many men in the factories as it will afford them an opportunity to secure a wider knowledge of the theoretical side of the trade and ultimately help them advance. It is the intention to lay considerable stress on this course.

The co-operation of the wood manufacturers of the two municipalities has been secured and their shops will likely be used in conjunction with the department.

Breezy Jottings of General Interest

James Pike, of the Keewatin Lumber Co., Kenora, Ont., was a recent caller upon the trade in Toronto.

A. E. Cates, of Terry-Nicholson-Cates Limited, wholesale lumber dealers, Toronto, is spending his vacation at Hutton House, Muskoka Lakes.

G. A. Lammers, of St. Paul, Minn., vice-president of the Adams River Lumber Co., Chase, B. C., was the guest recently of J. T. Todd, Toronto, eastern manager of the company.

J. L. Macfarlane, of the Canadian General Lumber Co., Toronto, who has been spending his holidays at his summer residence at Lake Chemong, Peterboro County, has returned home.

Notice has been issued to the effect that the partnership heretofore carried on between the late James G. Cane and George A. Anderson, of Toronto, wholesale lumber merchants, is being wound up.

Following an explosion which broke out recently on Colborne St., Brantford, Ont., considerable damage was done by fire to the east wing of the woodworking plant of Mickle, Dymont & Son. It is the intention of the firm to close their factory at Brantford and most of the machinery was stored preparatory to removal to Toronto. O. W. Rhynas, manager, estimates the company's loss at \$50,000 with \$40,000 insurance. The Mickle, Dymont plant at Brantford was shut down last month as the firm will carry on all their woodworking manufacturing activities in Toronto.

Live Secretary of Alert Association

G. H. Forster, Windsor, Ont.

G. H. Forster, of Windsor, Ontario, is now the secretary of the Border Cities Retail Lumbermen's Association which was formed some weeks ago and has been making splendid progress. Regular luncheon meetings are held every two weeks at the Prince Edward Hotel and are well attended and many matters of importance are discussed. Mr. Forster is secretary-treasurer of the Walter T. Piggott Lumber Co., and is enthusiastic in organization work. The lumber business in Windsor at the present time he says is exceptionally good. Building is going ahead at a rapid pace and all indications point to a steady demand for forest products during the remainder of the year. The Border Cities Association goes a long way towards clearing up any differences or difficulties among members of the trade and cements friendship and fraternity. At the regular fortnightly luncheons the attendance is most encouraging and the gatherings are always profitable and pleasant, marked frequently by spirited but good-natured discussion. J. C. Scofield is the chairman of the Association and, with two such live-wires in control as Messrs. Scofield and Forster, interest in the proceedings and in the Association itself, is not likely to lag.

Handling Material in the Most Economical Manner

Leading Toronto Lumberman Inaugurates New System of Transferring Green and Dry Material to and From Kiln—How Storage Yard is Laid Out

In every millwork plant the handling of material presents a real problem to the executives. Where considerable kiln drying is to be done, the cost of handling the lumber around the kilns becomes an important item and requires careful study if the most economical methods are to be employed. The method of piling the trucks in the kiln is very slow and costly and is not at all practical for firms who operate a battery of kilns. The system of loading kiln trucks in the yard is the logical method for keeping the kilns free from hold ups.

Every business will have a different problem in planning system of transferring the green and dry material to and from the kilns. Some firms require larger quantities of shorter lengths to serve their trade. Others are required to dry the longer lengths or both.

At the plant of T. H. Hancock, Limited, who operate a large planing mill and millwork plant, located on West Bloor St., Toronto, five new Sidman compartment kilns were recently completed. It is not the purpose of this reference to dwell upon the merits of this widely known make of kiln, but rather to give the reader some particulars regarding the transfer system for green and dry lumber employed at the Hancock plant in the operation of the kilns. Before the present addition of the five new kilns, T. H. Hancock, Limited, did their drying in five Sidman compartment kilns which were installed in part of the mill about seven years ago. These are still in good shape. However, the heat emanating from the kilns had so warped the floor of the room directly over the kilns that it was necessary to replace the wooden ceilings with a new type of monolithic cement slabs, thus giving an air space between the floor and ceiling of the two rooms. This work progressed together with the erection of the new kilns making a total of ten up-to-date dry kilns.

The new kilns are a separate unit built of pressed brick, and face the older kilns in the mill. They are also under the same loading shed and the ten batteries are fed from the one transfer track which runs between, with five kilns on either side.

The green storage yard is indicated at the left in the accompanying sketch. The squares represent the cement piers which are 18" by 18" at the ground tapering to 12" by 12" at the top and are 3'6" in height. On the cement piers in the yard are laid two tracks to accommodate three track cars which are loaded with green lumber. One of these tracks accommodates cars loaded with 14 foot lumber

only. A great deal of hardwood is not more than fourteen feet and with this in view special piling was arranged and kiln facilities. No. 7 kiln or the second in from the railroad spur shown in the sketch was constructed two feet narrower than the other four, the rest are 18' wide and all are 34' in length, inside measurement. This arrangement represents considerable economy in kiln space which would not be obtained if the shorter lengths were dried in a larger kiln.

The yard layout and kiln installation must of necessity, then, suit the requirements of the plant they are to serve. Careful plan-

Plant of T. H. Hancock, Limited, showing position of new kilns

ning is necessary so that every foot of yard space will be utilized to the greatest advantage.

The transfer car track is shown running through the centre of the green storage yard and between the kilns as previously explained and thence to the dry shed. When a quantity of, say, 14' lumber is required to be dried, six of the three track cars on the green storage tracks are rolled onto the six transfer cars without having to handle the material other than transferring the cars. It would not be practical to dry less than six cars as this number fills one kiln with

View of loading shed and track of dry kilns at plant of T. H. Hancock, Limited, Toronto. The new kilns are at the left.

enough space for the drying process to function properly. As mentioned previously 14' lumber would be dried in No. 7 kiln. The three track cars upon which the green material is loaded in the yard would be rolled from the transfer track into the kiln on three tracks identical in dimension to the green storage tracks. Both kiln and storage tracks are 1'4" higher than the transfer car track.

When the lumber has been dried it is again rolled into the transfer cars and either taken to the mill if needed immediately, or rolled onto the three track storage accommodation. It will be noted that from the time the green lumber is piled on the cars in the yard until it is unloaded in the dry shed or the mill, the old costly method of handling each piece has been eliminated.

The value of the investment in these kilns and transfer systems lies in the speeding-up of handling material in limited spaces. The loading and transfer systems also greatly lessen the cost of having the kilns idle when new cars are to be loaded. The five new kilns are now operating to capacity.

The new American hardwood flooring unit recently installed at the Hancock plant has also been in operation about six weeks. This new and up-to-date equipment is capable of turning out 150 feet of flooring a minute. Oak, maple and birch flooring are manufactured in $\frac{3}{8}$ inch and $\frac{7}{8}$ inch thicknesses and is finding a splendid sale. The material going into this flooring is thoroughly dried in the new kilns and the finished flooring comes from the new machines perfectly matched and with an exceptionally clean surface.

T. H. Hancock, Limited, employ about two hundred hands and with their modern equipment are in a position to meet the most exacting demands for quality and rapid delivery of buyers of sash, doors, flooring and special millwork.

How Pulp and Paper Exports Increase

A report issued by the Canadian Pulp and Paper Association shows that exports of pulp and paper in June were valued at \$12,368,456. This is an increase of \$809,772 over the previous month, and is the second highest total for the year.

The values of the various items exported were as under:

Paper—	June, 1922	June, 1923
Newsprint	\$6,136,649	\$7,006,722
Book paper	7,564	53,150
Other papers and Manufacturers	613,311	799,812
	\$3,777,352	\$4,508,772
Pulp—	June, 1922	June, 1923
Sulphate	\$ 801,395	\$ 823,847
Sulphite bld.	920,652	1,167,411
Sulphite unbl.	1,086,909	1,239,910
Mechanical	968,396	1,277,604
	\$3,777,352	\$4,508,772

Exports of newsprint last month were greater than in June, 1922, by 127,464 cwt. Book paper showed a big increase, and total pulp exports were greater by 98,271 cwt.

The exports in June were distributed as follows:

	Paper	Pulp
U.S.A.	\$6,998,665	\$3,052,950
United Kingdom	210,703	999,034
All other	650,316	456,779
	\$7,859,684	\$4,508,772

The figures of the first three months of the current fiscal year show a considerable improvement over those for the corresponding three months in 1922. For April, May and June of this year the total pulp and paper exports were valued at \$33,324,612, as compared with a total of \$25,548,065 for the corresponding three months of 1922.

For the three months' periods the figures were as follows:

Paper—	3 Mos. 1922	3 Mos. 1923
Newsprint	\$15,869,712	\$20,321,885
Book paper	12,668	89,911
Other paper	1,346,876	1,904,626
	\$17,229,256	\$32,315,422
Pulp—	3 Mos. 1922	3 Mos. 1923
Sulphate	\$2,076,515	\$2,205,797
Sulphite bld.	2,562,802	3,486,552
Sulphite unbl.	2,134,053	2,998,681
Mechanical	1,545,439	2,318,160
	\$8,319,809	\$11,009,190

Canadian exports of pulpwood in these three months amounted to 385,511 cords, valued at \$3,524,447, compared with 200,675 cords, valued at \$2,031,786, in the corresponding three months of 1922.

Interesting News of Lumber Industry

The Edgumbe-Newham Co., Limited, of Vancouver, B.C., have recently installed a staining plant in connection with their manufacturing activities and are now turning out Edham Kreo-Kolored Shingles manufactured from British Columbia red cedar. The colors are tile red, bungalow brown, moss green and silver grey. J. T. Todd, 620 Federal Building Toronto, is the eastern manager of the firm.

J. Ormsby Oliver, manager of the Oliver Lumber Co., Limited, Toronto, accompanied by his wife and son, John, left lately on an extended trip to California. Mr. Oliver, whose health has not been good for some time past, will remain in the South for many months in the hope of regaining his former vigor. During his absence the business will be looked after by W. Frank Oliver, vice-president of the company, who is widely known in lumber circles and is also a director of the National Hardwood Lumber Association.

The planing mill of the Digby Lumber Co. at Lindsay, Ont., was completely destroyed by fire recently together with the contents. A spark from the fire hole, used for heating glue, ignited a pile of shavings, and the flames swept through the frame structure with rapidity. A stiff breeze was blowing and the sparks and embers were carried across the river, seriously endangering the Horn woollen plant and a large boathouse. The loss of the Digby Lumber Co. is estimated at \$16,000.

A luncheon of Ontario members of the National Hardwood Lumber Association was held recently at the Lake Shore Country Club, Clarkson, when about fifteen were present and enjoyed a splendid supper. Afterwards an adjournment was made to the summer home of W. Frank Oliver, Canadian director on the board of the N.H.L.A., when various matters of importance were discussed, including trade prospects, enlarging the membership, the accession of associate members and other topics.

United Kingdom Interpretation of Trade Terms

Acting Trade Commissioner Douglas S. Cole, of Bristol, Eng., writes that the Cardiff Chamber of Commerce has brought to the attention of its members are following definitions of trade terms drawn up by the British National Committee of the International Chamber of Commerce. In the past there has been considerable misunderstanding as between the Canadian exporters and British importers with respect to the exact interpretation of certain trade terms; therefore a representative definition is a distinct advantage. This information is of specific value to Canadian exporters, as it gives in detail the obligations of the seller and the buyer in every case as interpreted by the United Kingdom importer. For such Canadian firms as are buying Welsh anthracite at the present time the interpretation of C. & F. and C.I.F. for coal, coke and patent fuel will be of interest, while the general interpretation of these terms is given as well.

It may also be explained that the terms F.O.T. and F.O.R., meaning respective free on truck and free on rail, have the same significance in regard to the obligations involved.

F.O.B.

F.O.B. is understood to mean in the United Kingdom and throughout the British Empire that the goods are provided "free on board a vessel" and has no other significance.

In this case (A) the Seller must—

1. Meet all charges incurred in placing goods actually on board the vessel.
2. Provide the usual Bill of Lading.
3. Be responsible for all loss and/or damage until the goods have been placed on board the vessel.
4. Comply with the Sale of Goods Act, 1893 (Pt. iii, Sec. 32 (3) which reads as follows:—

"Unless otherwise agreed, where goods are sent by the seller to the buyer by route involving sea transit, under circumstances in which it is usual to insure, the Seller must give such notice to the Buyer, as may enable him to insure them during their sea transit, and, if the seller fails to do so, the goods shall be deemed to be at his risk during such sea transit."

(B) The Buyer must:—

1. Be responsible for all loss and/or damage which may occur from the time that the goods are placed on board the vessel.
2. Be entirely responsible for all loss in subsequent movement of the goods and/or charges.

F.O.T. and F.D.A.

F.O.T. is understood to mean "free on trucks," and F.O.R. is understood to mean "free on rail."

In this case (A) the Seller must—

1. Deliver the goods free on the truck.
2. Obtain from the Transport Agent a Waybill.

(B) The Buyer must:—

1. Take full responsibility for the goods from the moment they are placed on the trucks.
2. Pay all transportation charges.
3. Handle all subsequent movement of the goods.

F.A.S.

F.A.S. is understood to mean that the goods are delivered under the ship's tackle.

In this case (A) the Seller must:—

1. Pay all charges to place the goods alongside the ship and so that they can be handled by the ship's tackle.
2. Provide the customary Dock or Wharfingers' receipt.

(B) The Buyer must:—

1. Be responsible for all loss and/or damage incurred thereafter.
2. Handle all subsequent movement of the goods and be responsible for all charges.
3. Pay all demurrage and/or other charges which may be incurred after the conditions prescribed in (A) 1 above have been fulfilled.

C. and F. (Other Than Bulk Cargoes)

C. & F. is understood to mean that the goods are to be provided by the seller with all charges and freight paid but NOT insurance.

In this case (A) the Seller must:—

1. Pay all transportation to the agreed destination.
2. Be responsible for all loss and/or damage until delivery of goods into custody of shipowner.

3. Deliver to the buyer or his agent a clean bill of lading to the agreed destination.

(B) The Buyer must:—

1. Be responsible for all loss and/or damage after goods have been placed in the custody of the shipowner and for taking out all necessary insurance.
2. Take delivery and pay costs of discharge lighterage and landing at port of discharge in accordance with Bill of Lading clauses.
3. Pay all import duties, customs and wharfages, if any.

C.I.F.

C.I.F. is understood to mean that the goods are to be provided by the seller with all necessary charges, insurance and freight paid.

In this Case (A) the Seller must:—

1. Pay all transportation charges to the agreed destination.
2. Be responsible for all loss and/or damage until delivery of goods into custody of shipowner.
3. Take out and pay all necessary marine insurance.
4. Deliver to the buyer or his agent a clean Bill of Lading to the agreed destination and marine insurance policy or negotiable insurance certificate.

(B) The buyer must:—

1. Be responsible for loss and/or damage thereafter and must make all claims to which he is entitled under insurance.
2. Take delivery and pay costs of discharge, lighterage and landing at port of discharge in accordance with Bill of Lading clauses.
3. Pay all import duties, customs and wharfage charges, if any.

Coal, Coke and Patent Fuel in Bulk

C. and F.

C. & F. sales bind the seller to supply the stipulated cargo free on board ship at loading port and to provide a contract of affreightment in accordance with the conditions of the contract of sale, or, if no such contract, on customary terms, the buyer arranging the insurance himself.

On the cargo being loaded the seller has to get Bills of Lading signed in the usual form as soon as practicable which he endorses in favour of and sends to the buyer with an invoice at the C. & F. price from which he deducts the freight, this being payable by buyer on delivery.

There is no obligation upon the seller to replace the cargo in the event of loss or damage.

(The above are the customary conditions implied in C. & F. sales. They are sometimes modified by special clauses in contract of sale).

C.I.F.

C.I.F. sales impose the same obligations on seller and buyer as under C. & F. clause for coal, coke and patent fuel in bulk, but in addition the seller has to provide and forward as soon as obtainable after shipment a policy or negotiable certificate of insurance against the usual marine risks for the net balance due as per invoice, plus an agreed upon percentage for assumed profit in favor of buyer, or failing agreement 10 per cent.

(The above are the customary conditions implied in C.I.F. Sales. They are sometimes modified by special clauses in Contract of Sale).

Note.—The foregoing definitions are those generally accepted at the present time but the obligations involved by the Trade Terms referred to are, of course, subject to variation from time to time in the conditions of individual contracts.

Pulp and Paper School Ready

Plans for the operation of a pulp and paper school which were made at the last Quebec Legislature session are now materializing.

The new school will be annexed to the technical school in Three Rivers. While employed at the large mills located in that city employees will have the opportunity of following theoretical and practical courses at the new school. The Forest Rangers' school will be opened the first week of September at Berthierville.

When you can see a way to make waste yield a good profit, then you have found the real answer to waste conservation. And this holds true whether it is tree tops and stumps in the woods or lumber trimmings in the factory.

LUMBER TRADE CONDITIONS

Ottawa Business Fair and Prices Firm

Though the volume of business was not as heavy as had been expected prices failed to show any signs of declining in the Ottawa lumber market during the opening period of August. Trading on the whole was rather dull and was attributed to the season of the year, and the increased stocks of western lumber which were making their appearance in the eastern market.

In connection with the western stocks it was pointed out that local manufacturers could not compete with the western manufacturers, especially in the merchantable grades, and as a consequence did not attempt to slash existing prices to meet those of the western sellers.

"The eastern manufacturers are not worrying, as they feel that their prices are such that they can show a little profit if they can effect the sales of their stocks," remarked one of the producers.

The demand from the United States was not as great as had been expected, and the domestic requisition did not show any marked improvement. Building in Ottawa remained fairly quiet, the permits for July showing a drop of over a quarter of a million dollars as compared with July 1922.

Railway and water transportation remained good, and conditions with the sash and door and the woodworking factories did not show any general change.

In connection with transportation one manufacturing company decided to rail four million feet of choice logs rather than ship them by water. The idea was to make sure of the logs getting to the mill on time and being manufactured in high class lumber, which it was expected would be sold before the snow flies. Formerly this company brought all its logs by the water route.

Preparations for the installation of woods camps were being made by several of the manufacturers, two of the earliest to enter the Kipawa district being McLachlin Bros. Arnprior, and J. R. Booth Limited, of Ottawa.

The outlook for the fall was considered to be fairly good, the majority of the manufacturers stating that they expected considerably improved business during September and October.

Ontario Lumber Market is Seasonably Quiet

The lumber market is seasonably quiet at the present time with a good outlook generally for fall business. Retail yards are pretty well stocked as yet and buying has eased off a bit. Prices, however, in most lines are holding firm and there is no indication that there will be a drop in quotations as some have insisted. Practically all stocks of millmen in various parts of the province have been sold at a good figure and the mills are now shipping out dry lumber.

Building continues brisk in the larger centres and the outlook for fall structural activities is regarded as bright. On the whole it is estimated that lumber prices are about 20 per cent. higher than they were a year ago but manufacturing costs have considerably increased. All mills are running to capacity and report labor conditions as fair although, in the general ranks of the men, there has been a certain restlessness of late owing to the excursions to western points to help gather in the harvest.

A leading wholesaler who recently returned from a visit to a number of consuming centres in New York State, says that the tone of trade is firm and the outlook for fall is encouraging. More inquiries are being received and shipments are going forward in fairly satisfactory volume. Naturally the amount of lumber distributed at this season of the year has fallen off as is usual with the summer months but in the aggregate turnover is regarded as promising. There will be no boom but a fair movement of stock and a number of the larger firms are preparing to carry on logging activities on as large, if not larger scale than last fall.

Word received from Great Britain is to the effect that owing to the dockers' strike at London there are from 90 to 100 timber vessels from the Baltic awaiting unloading. This has caused a temporary cessation in demand but of late there has been a fair call for white pine from Ontario in 3 x 7, 9 and 11, with special demand for the latter. This may cause a reduction in the 1 x 12 sizes on the local market. The West India demand has also picked up and a number of shipments are going forward to that point.

So far as the call for British Columbia forest products is concerned, business is seasonably quiet. Some manufacturers have been

forced to sell their various surpluses at what they can secure. There is a lot of talk here and there regarding the probabilities of business this fall but very little excitement has been created.

Speaking of western conditions, a leading eastern representative of West Coast products sums up the situation as follows: We still maintain that no serious reaction is going to occur. Are there any basic conditions for such a reaction? The stocks at the mills were never so low in history. Foreign countries are continually buying more and more stocks. The railways are as good customers as ever, although business is not booming among the retailers. Those who are aggressive are getting fair business. All these facts to my mind, prove that we have a reasonably heavy demand for the stocks that are being manufactured, and no particular fear need be held as to the future.

Of course the shingle market is in a deplorable condition, but shingles are by no means a measure of general conditions. Most of the mills are down, or shutting down, as they cannot continue to manufacture shingles and lose 50 cents on every thousand the mill produces. The late summer should see most of the stocks on shingles at the Coast used up, and with a reasonably fair fall consumption, the price will undoubtedly go back to a working basis from the standpoint of the mills.

Quebec Reports Slackened Demand from Overseas

The export of timber and sawn lumber from the port of Quebec to the United Kingdom still continues, but judging from advices received from abroad by Quebec shipping firms, the demand from the British importers has spent its force for the present, at least. Quebec exporting firms report that 80% of the orders booked by them in the United Kingdom last winter and spring have been shipped and though there are a few cable inquiries received, no new orders for export have been received.

During the month of July, 1,818,411 feet b.m., sawn lumber and 425,400 feet b.m., timber have been shipped from Quebec to the British Isles, making a total of 7,070,457, feet, b.m., wood exported from May 15th to July 31st, 1923.

In the meantime, to meet the demand from the United States market the Quebec lumber mills have been filling orders to the capacity of their production up to the middle of July, when the demand for the Canadian woods began to slacken on account of a lull in the American building boom caused by the increased cost of labor and material. The slump, however, is not expected to last, for the reason that labor has been called to its senses and the price of lumber on the American markets has also experienced an appreciable decline. Expert observers of the situation are optimistic that, with the approach of cooler weather, the American construction boom will again react and Quebec mill interests are in consequence preparing for the prospective business.

According to economic conditions and advices received by the Canadian lumber trade, from their United Kingdom agents, little can be expected for the rejuvenation of wood business in European countries until the political difficulties are ameliorated. Quoting from these advices received during the last week of July, giving reasons for the inactivities of the British market in the lumber trade,— "Events are not favorable in the present for much business. The political situation is very disquieting. The renewal of labor troubles in the number of unauthorized strikes amongst transport workers goes to show that the necessary process of wage reduction is going to prove a troublesome one. The ordinary merchant importer at the coast towns, with a regular and to some extent retail trade, does not feel so quickly the influence of passing events. But merchants, relying on their distributing to all centres herein as well as export outside of England, are complaining. They are finding the placing of bills of lading slow work, and as they do not care to land heavy quantities in the present, they are often obliged to accept prices which give very little profit.

"Though a spirit of optimism still continues to prevail in England, it is fully realized that drastic steps must be taken to end the situation because the collapse of Germany would in all probability be followed by a revolution which would spell chaos to the entire European world. There are still two million unemployed in England who will have to receive Government assistance next fall and winter,

Lumber Trade Conditions

(Continued from page 54)

and in connection with these acute conditions, the British Government is using every effort to conciliate the situation."

"Throughout the whole of this season the demand for white-wood has been poor while redwood values have advanced. It is rather puzzling to account for this great discrepancy but probably it can be ascribed in a large measure to the almost collapse of Germany, always a large buyer of whitewood, to the absence of Holland as a purchaser and to the unprecedentedly dull state of shipbuilding and other industries in Scotland. These three countries used to be the largest consumers of whitewood and they have all been practically out of the market this season.

"The conflict between Germany and France is at the root of the matter, the German currency having collapsed and, in consequence, imports are rendered so costly as to almost preclude trading. Holland has lost her best outlet for whitewood where commercial activity has been curtailed, not only in her lumber but general trade. Whether French business will improve and the exchange render larger timber sales possible, cannot under present circumstances be surmised, but appearance are not hopeful.

"In Scotland trade has been practically at a standstill for some time owing to her shipbuilding inactivities and the wood importers in that country are in no evident hurry under such conditions to buy."

English agents in these uncertain times are reluctant to assume the responsibility of giving definite advice to their Canadian principals. They communicate their impressions advisedly in accordance with their duty, at the same time leaving it to the judgment of the Canadian firms whom they represent in the United Kingdom, to form their own conclusions. In this regard a British agent of a Quebec shipping firm sums up the general trade outlook:—"The holiday season, labor troubles and the generally unsettled position on the continent are having a restricting effect on business and a quiet stage is now being approached, due largely to political conditions. Every line of industry is feeling the strain. In engineering and shipbuilding, operations are being delayed by strikes and the output of tonnage is rapidly decreasing. The coal trade is fairly good due to heavy orders from the continent but in the cotton and in the pottery districts there prevails great depression. Lancashire's main industry is in a state of unprecedented dullness, and the wood trade is also suffering depression from the adverse effects of foreign exchanges. Fortunately housebuilding is progressing fairly well in most sections of England, which forms a good basis for the Canadian timber trade to keep prices steady until other industries survive.

"In the meantime, the British Government is making a determined effort to end the European political difficulty which is crushing the economic status of Europe and the commerce of the world, and though the prospects of a settlement are anything but bright in the present, nevertheless good results are expected. There is not the least doubt but that the European powers are playing political chess with the situation. England, with the full knowledge that she is suffering economically and her industrial and commercial relations with the world being greatly affected, is tired of being a spectator to the game, and, in consequence, has thrown her lot into the ring. Her role, however, is a difficult one, owing to her cordial relations with France and, at the same time, knowing the game of the Germans to shirk, if possible, their obligations, while France in the enjoyment of the sympathy of a large percentage of the English people, is determined that Germany will live up to the letter of the Versailles Treaty.

"The rectitude of France in the dispute and her full determination to stand pat, makes it difficult for England to go as far as she would like by interference, while the Germans, even with the knowledge of a general collapse and with the nightmare of a revolution, are equally determined to shirk their obligations by every possible subterfuge, in the hope that England, pressed as she is economically, and with her army of unemployed, will force France and Belgium to listen to terms which will free her from the burden of the war and thus allow her to function her industries and give her an open door to flood the world with her manufactured products to the economic detriment of all the allied countries who defeated her in the great war."

Enlightened Englishmen, familiar with the political situation of Europe, the cat and mouse game of Germany, express the opinion that the situation has become so acute that a settlement is nearer than the general public believes, and look forward to this end not later than the month of October; otherwise a world's cataclysm will probably take place to shake the foundation of civilized nations in accord with Bolshevik Russia.

It is owing to this state of European affairs that the Canadian wood trade is not receiving the demand for timber and sawn lumber

from the United Kingdom as was anticipated for 1923. In the meantime, British economists and heads of industrial interests with their faith in the Government, are still optimistic.

Canadian Woods at Empire Exhibition

In the building which the Dominion Government is erecting on the grounds of the British Empire Exhibition, and which will cover an area of about one hundred thousand square feet, one-half will be occupied by the Dominion Government's own exhibit, which will reveal the variety and extent of Canada's wealth in farm and forest, mine and waterfall.

Forest products, having an economical importance second only to agriculture, will be given a prominent position in the Canadian building, and the services of a specialist have been secured from the forestry branch of the Department of the Interior to create an exhibit to illustrate Canada's forest resources. This specialist is W. B. Stokes, of the Forest Products Laboratories of Canada, Montreal, who has just returned from British Columbia, where he has been collecting material for this display.

Speaking of conditions in British Columbia, Mr. Stokes states that the province appeared to be more fortunate than eastern provinces this year in the matter of forest fires. Doubtless weather conditions were the cause of this, but some credit must be given to the unrelaxing vigilance and resource of the Dominion and provincial forest services. The industry in the West is in a sound condition and fully occupied, a result which must be ascribed in some degree to the world-wide extent of its overseas market. The scale on which the timber operations are effected and the organization of industry as a whole were doubtless contributory factors in arriving at this satisfactory condition.

Mr. Stokes is now engaging material in Eastern Canada and is enthusiastic concerning the value of the many various hard woods and softwoods which are available. This value can be seen, Mr. Stokes states, by everyone who visits the wood-using factories of Quebec and Ontario. Wood-users are very conservative, and if manufacturers throughout the Empire can be made to realize the fact that there is a Canadian wood for nearly every purpose, and that for some purposes Canadian woods are the best, they will be slow to seek supplies elsewhere. Imperial sentiment would provide, not the motive for buying Canadian woods, but the opportunity for learning more concerning their value. Canadian forest products are the most versatile as well as the most abundant in the Empire, he states.

How General Business is Shaping Up

In a recent letter sent out by the Toronto office of the Vancouver Lumber Co., Limited, on the business and industrial situation, an able review is given of conditions, and the following extracts will be read with interest:

"Business may not be looming but the lumber market is fundamentally sound, and greater confidence should prevail. The summer months of July and August, in the language of the farmer, is the time between hay and grass. Lumber, in a sense, is a seasonal business, and the summer slump should really be a period of added effort. As a matter of fact, many retailers are taking advantage of the general attitude of seasonal quietness and, through increased sales pressure, are enjoying a good volume of business.

"The present lull in the market is not a sign of depression. In fact, one West Coast authority states the mills welcome the present inactivity, as it allows them to catch up on bulky order files. Now, as always, buying for future needs should be carefully considered and kept well under control. But this does not mean that a good volume of business cannot be safely done by means of intelligent and well-directed effort. The public have not stopped buying or building but they are spending carefully. This condition is an evidence of common-sense and is cause for congratulation rather than uneasiness.

"It is interesting, at this time, to consider the relation of the paper currency of the Dominion to the gold supply. The relation between the two is an unfailing barometer of basic conditions. In June, preceding the outbreak of the war, the ratio of gold to paper money in circulation was 66.1 per cent. If that figure can be regarded as normal, it is significant to note that the currency was inflated away from normal until the ratio in October 1920, was as low as 40.4 per cent. The fall of 1920, it will be remembered, was the point of greatest inflation. Beginning with the last quarter of 1922, gold holdings have consistently increased until the Federal statement in January of this year shows the ratio at 61.8 per cent., or within five per cent. of the pre-war figure.

"In view of the commercial crisis which this country has passed, the present showing can certainly be regarded as favorable."

Here's an Investment that Can Show 20% per Annum

An investment that will show a clear 20% per annum for years to come is not to be despised, is it? It's the actual minimum return you can expect from an investment of \$1,637 for a new 60" x 16' horizontal return tubular Boiler bought from us, including suspension harness and columns, giving you 90 h. p., 125 lb. pressure and built to pass the new Interprovincial Boiler

Codes. It will save that money in repairs, in fewer shut downs, steam savings and in lower man cost for stoking and attention. Not only that, but your constant worry when you have an old, shaky, obsolete, maybe dangerous, steam wasting Boiler plant is a thing of the past. Other sizes in proportion. Let us send you full particulars.

Nova Scotia Lumberman Sounds Warning

F. C. Whitman of Annapolis Royal, Nova Scotia, commenting recently on conditions in the maritime province stated that from 1914 up to the present there has been a very great change in the lumber situation in all of Western Nova Scotia. In fact, lumber as an active export proposition has been shut off, except small cuts for the American market. The lumber firms have closed, and no new business has developed in manufacturing. The holdings have very largely changed hands and passed into holding companies for anticipated pulp wood operations. As yet no new developments are under way for pulp mills although in one instance a very expensive plant was put up which reached the stage of being ready to operate and has been closed for two years owing to financial difficulties.

Small operations are under way for the shipment of pulp wood and it is a try out as to the cost of the wood delivered at a shipping place where vessels or steamers can load. Locally, the collection of pulp wood for shipment by rail or water to mills in operation has been costly and is not being pushed. The mills being so far kept running by wood supplies near by, team or a short rail haul. It is an interesting stage of the manufacturing of wood or timber. That is to say, whether for the future the turn will be entirely to pulp or a revival of the lumber cut for local consumption and export.

Fortunately Nova Scotia has escaped serious fires, and the cut over land will, if fires are stopped soon, recover to ordinary cutting propositions. It would, however, be fifteen to twenty years from now to come back to average conditions of say 1910. There has been considerable depopulation and which is still going on in wooded districts where settlers held farms and wood lots. These people have found it impossible to make a living without having the chance of a winter's earning in the woods or a market for what they could produce.

Large Increase in Exports to U.S.

Statement of lumber and lumber products exported to the United States from St. John consular district for quarter ending June 30th, 1923, with figures for corresponding quarter of 1922.

Rough Spruce Pulpwood	\$ 5,006.00
Rossed Spruce Pulpwood	32,900.00
Peeled Spruce Pulpwood	6,000.10
Peeled Poplar Pulpwood	12,326.50
Spruce Piling	4,680.36
Spruce Poles	2,475.00
Cedar Telegraph Poles	272.69
Spruce Lumber	549,620.07
Hemlock Lumber	5,743.65
Pine Lumber	28,586.63
Laths	514,814.22
Shingles	2,162.87
Fir Lumber	1,317.65
Oak Lumber	249.10
Wood Pulp	421,806.37
Total	\$1,587,961.21
Total for corresponding quarter of 1922	\$1,031,563.58

Armies of Men Fight Fires in Quebec

Forest fires in Quebec Province are becoming more dangerous every day. There are now five thousand men engaged in fighting them. With no improvement in the St. Maurice Valley district, and a series of small fires recorded in Lake St. John, Chicoutimi and Saguenay counties, the situation is not considered as any too good by the forest branch office. The village of Escalane, which was menaced recently, was saved, but fires are still raging in the vicinity. There are fires reported in the Matapedia Valley and others on the north shore. There are no fires in the Abitibi.

The drought is general and the recent cold breeze has had no improving effect. Directly under the control of the forestry branch there are 2,500 men on duty, the others being employed by fire protection associations. A few years ago the total number of men on duty in the most dangerous period of the year was only six hundred. More protective legislation is expected to be passed at the next session.

He Criticizes Canadian Forest Policy

Capt. L. McIntosh Ellis, Government Director of Forestry in New Zealand and also a graduate of the Forestry Department of Toronto University, in Canada for the British Empire Conference on Friday, gave some interesting comparisons recently on New Zealand and Canadian Forestry. In part he says:

"Canada's possibilities in Forestry are tremendous, but I have

been much struck with the reckless inattention to Forestry in this country. Hundreds of thousands of acres are lost through indolence. Far more money ought to be spent on fire protection. At the inception of Government Forestry in New Zealand in 1921, the loss annually by fire exhausted 50,000 acres per year. In the two years since it has been reduced to 1,332 acres. The fire patrol man of each district canvasses as many people as possible in that district and obtains a personal promise of co-operation. New Zealand is almost self-supporting in timber. The annual growth almost supplies the demand and soon will do so entirely. Capt. Ellis stated that timber growing was very profitable in New Zealand. He suggested that private enterprise might profitably engage in Forestry in Ontario in a similar way."

When Forests are Gone What Then?

An indication of the situation that will be faced by Canada in a very short time, if the destruction of forests by fire continues in such widespread fashion as during the past few years, is seen in a report by Dr. Richard T. Ely, professor of the University of Wisconsin, on the "Forest Crisis" in the United States. Dr. Ely has made a recommendation for government ownership of all forest lands in the States and the creation of a block system in timber areas so that administration and fire protection would be economically conducted.

In this connection, it is pointed out that, whereas the American people own just 25 per cent. of their forest estate, 85 per cent. of all timber lands in Canada belong to the people of the Dominion, which means that every time there is a forest fire in the Dominion the whole nation suffers—not "just the lumber companies." Industrial economic and employment conditions are also directly affected by a timber conflagration.

Dr. Ely in his statement, refers to the fact that there are 80,000,000 acres of burnt-over forest country in the United States which are lying absolutely idle. He also stresses the economic value of maintaining and protecting natural forest beauty for recreational purposes.

"The Great Lakes section will lose 75 per cent. of its charm when the forests are gone," he said. "Recreation means an actual money income to the state. It is estimated that Michigan profits to the extent of \$75,000,000 a year from the people who visit that state for recreational purposes."

Remove Pulpwood Embargo from Politics

The pulpwood business in the city and district of Quebec so far as regards shipments to the American mills, is normal, and Quebec dealers make the statement that railroad transportation is now satisfactory owing to a sufficiency of freight car supply. The prices prevailing are the same as in the winter and spring months, \$20.50 per cord, delivered at the New York mills. In the meantime the American mills are making no effort to buy for next year. They have a good supply in stock and are not in the least alarmed over the proposed embargo, feeling assured that it will not be put in practice by the federal government. They are imbued with this assurance from the fact that the government has promised an inquiry into the pulp export trade by a Commission, which they opine, will be the last heard of the embargo question. Quebec pulpwood brokers and shippers to the American mills entertain the same feeling.

One of the largest Quebec shippers in a talk with the Quebec correspondent of the "Canada Lumberman," said that when the proposal was made by the federal Minister of Finance to place an embargo on the export of pulpwood, he certainly was alarmed in case the proposal would be put into effect. It would drive him out of business, as he felt sure the government could not protect the farmer and the city broker by the establishment of a minimum price on sales of wood to the Canadian mills. He said he had talked the matter over with his American customers who admitted that the Canadian government was within its rights to protect the Canadian forests by an embargo on export.

Speaking of the American mill owners and their feelings over the matter, the Quebec broker, who is a frequent visitor to the pulp and paper centres in the United States to sell his wood, said that in his opinion the pulpwood export question would adjust itself in the course of time. The American paper manufacturing interests are already established in Canada. They control the capital investments in the Canadian mills and it would only be a short space of time when the present mill operators in the United States would have to come into Canada for the reason that their base of supply was gradually growing more distant and there were signs of this even in the present. He qualified his statement by pointing out that the American paper mill operators were not hurrying into the Canadian market to purchase their next year's supply. Furthermore, these mill operators were making no special effort to extend their business or the enlargement of their mill premises.

In the meantime Hon. L. A. Taschereau, Prime Minister of Quebec, has come out flat-footed against the embargo. He has repeated the sentiments heretofore expressed by Ex-Premier Drury, that the new colonization settlers should have the right to sell the wood which is in their clearance, cut from the land on which they are about to settle. In a speech made by Mr. Taschereau, on August 1st, at a political gathering held at East Angus, is regard to the proposed embargo on pulpwood provided for by a Federal Act and only awaiting an Order-in-Council for enforcement, said:—"No one was more anxious to bring industries to Canada than he. Sir Lomer Gouin had brought many industries to Quebec by the prohibition of the export of pulpwood cut on Crown Lands, and he would ask his friends in Ottawa to consider carefully the position before going any further." He proceeded to say:—"It is well known that our colonists live for the first few months and often for the first year, on the proceeds of the wood they cut on their lots. They must sell the wood and it is much the same with the farmers. A colonist cannot get a crop at once. The wood is necessary to him and, therefore, there must be a market for it.

"They have been making good money, especially of late years, by the sale of the wood they cut on their lots. If exportation of this wood is prohibited by Ottawa, can our colonists find another market that is as remunerative as the American market? Can the mills in Quebec absorb all the wood which the colonists cut on their lots and which they must cut and sell in order to live while waiting crops? I put the question and ask our friends at Ottawa to consider it before going and further. If the American market is closed what will happen the price of wood? That is a consideration. Only the Canadian market will be open for the colonists and will they get the

prices they now receive? I may be wrong but I believe that the price of wood is made in the American market where it is in great demand. It had been said in some quarters recently that the embargo would not affect the wood cut by the colonists. Let them make this distinction. How can the embargo be made upon one class of owners and not on another class of owner? I put that to jurists. If the embargo does exempt the colonists and the farmers, would that not mean such demands upon them for wood for the American market that would denude their farms of all the wood there is in short order. I put that question also and ask our Ottawa friends to consider it."

The East Angus speech made by Hon. Mr. Taschereau has been the cause of much comment pro and con. The general public not, however, directly interested in pulpwood or lumber or the manufacture of pulp and paper, agrees that the question which is of vital importance should be altogether removed from the realm of politics.

No More Timber Sales for Some Time

Until the Administration completes a general survey of Provincial timber resources, further timber sales in Ontario will be few and far between, according to Premier Ferguson.

Discussing recently the likelihood of immediate timber sales, Hon. Mr. Ferguson stated that the general survey—which is now complete as regards the Mississauga and some of the larger reserves—would have to be brought more clearly up to date before further distribution of timber resources would be countenanced. Only where the needs of a company were very apparent, he said, would the Government, for the present, at least, release any timber tracts.

As regards the white pine blight, which at one time threatened to wipe out the Province's white pine resources, the Premier said that his information was that the disease had been arrested in its course across the timber country.

MacLean Reports Cover Canada

MacLean Building Reports will give you accurate, advance information on every building and engineering contract of consequence in the Dominion.

These reports are issued daily and reach subscribers in ample time to bid on the work or submit prices for the machinery, equipment, materials or supplies required.

Subscriptions may be placed for any one city, portion of a Province or more than one Province. Rates range from \$25 yearly for the smallest cities to \$664.00 yearly for the entire Dominion.

Hundreds of firms are deriving much financial benefit from the use of MacLean Building Reports. Tell us what territory you cover and put it up to us to show how we can help you get more business.

Try this service out. The result will please you. Write today for rates and free sample reports.

OTTAWA

Linn Logging Tractor on the operations of the International Land & Lumber Co. Limited, at St. Felicien (District of Lake St. John, Que.)

LINN LOGGING TRACTOR

The illustration shown above is from a photo, just received from one of the officers of the above company, taken last winter during their haul. It is apparently taken from the load on the tractor and shows the grades that had to be hauled up—it can readily be seen, the drop in the country up which they have come.

The International Land & Lumber Co. Limited, had no specially prepared roads—the operator they put on the Linn Logging Tractor, and who successfully operated it during their entire haul, had never seen a Linn Logging Tractor before he went to work on this one. Their haul was approximately seven miles—with several bad down grades and some very stiff and long up grades—they completed their haul about March first, and moved their wood from skidway to dump at a cost of \$3.50 per thousand feet—and their fixed charges included a 100% depreciation charge against the Linn Logging Tractor as well as their loading and unloading and their road preparation and maintenance costs—and also the cost of their sleigh equipment.

This is the tenth of a series of photographs taken last winter where Linn Logging Tractors were in operation in various parts of Ontario and Quebec—the eleventh will appear in the September First issue of this magazine.

Edgings

Export of logs from B. C. in 1922, brought in foreign money to the amount of \$2,939,000.

The sawmill of Theodore Bosse near Edmundston, N. B., suffered a loss by fire recently.

David Vyr has started work on the erection of a sawmill at St. Rose de Watford, Que. The dimension of the mill is 60 ft. by 38 ft.

Beaupre & Durette, Estcourt, Que., have commenced work on a sawmill to cost \$8,000, the dimensions of which will be 30 ft. by 78 ft.

Everett Crosby & Son, lumber dealers, Yarmouth, N. S., suffered the loss of six thousand feet of hardwood and a dry shed when fire broke out on the company's premises.

The South Shore Lumber Co., Vancouver, B. C., are making preparations to spend \$7,000 on dry kiln installations at their mill, cor. Front and Manitoba Avenues.

The Hoge Timber and Investment Co., Limited, Port Coquitlam, B. C., recently opened a new camp and operations will start immediately.

Wm. Hoover, representing the Tomlinson-Mitchell Lumber Co., Winnipeg, Man., was in Toronto and other cities lately on a business visit.

Brigadier-General J. B. White, director of lumber operations for the Riordon Company, recently underwent an operation at the Montreal General Hospital.

Fire recently completely destroyed the entire plant of the McNair lumber and shingle mill at North Vancouver, causing a loss of between \$75,000 and \$100,000, all of which is covered by insurance.

A conflagration in the mining town of Anyox, B. C., recently imperilled the lives of hundreds of people, causing a damage loss of \$200,000. The conflagration was started by an incipient forest fire which swept over the town.

The mill of H. Champagne, St. Cyrille, Drummond County, P. Q., has been destroyed by fire. The plant comprised a saw mill, planing mill, and sash and door factory. It is being rebuilt. Besides the mill a large amount of lumber was destroyed.

Shelvin, Carpenter, Scanlon & Company, Limited, Winnipeg, Man., was recently organized with a capital of \$4,500,000. The company will conduct a general lumbering business, manufacturing and dealing in all kinds of forest products.

The Laurentide Company, Grand Mere, Que., have wasted no time in getting their reforestation programme started. They are now planting 1,000,000 trees a year and by 1925 will be setting out 5,000,000 trees a year.

Sir Frederick E. R. Becker, prominent English pulp and paper manufacturer, arrived recently at Quebec. He does not place much faith in theories of reforestation but is strongly in favor of making deliberate incendiarism of forest resources a criminal offense.

J. M. Card Lumber Co., Memphis, Tennessee, have obtained a supplementary license in Ontario with a maximum capital of \$75,000 to manufacture and deal in lumber and wood products. W. H. Stubbs, of Kitchener, Ont., is the company's representative.

The Dick and Carew Lumber Co., Limited, Peterboro, Ont., is a new company recently formed to manufacture and deal in lumber, lath, shingles, sash and doors, mouldings and hardwood flooring. Capital \$50,000. Alex Dick and Frank Carew are two of the incorporators.

The possibilities of the development of a method by which straw and other waste on farms may be used in the manufacture of paper are to be investigated in Canada by Sir Frederick Becker, the noted paper manufacturer. He sailed on the Empress of Scotland recently and will spend two months in the Dominion.

The sea-plane E.U. was launched at Montreal, recently, and made a short trial flight at the end of which it became the property of the Canadian government. It cost \$20,000 to build and is equipped with 350 horse-power Rolls-Royce engine. The seaplane is the first of six now being built and will be used in fighting forest fires.

The St. Maurice River in the reach between the Power House Dam and Little Piles, Quebec, is congested with logs, there not being sufficient water to carry them over the dam, while below the bays are full and the shore line littered with thousands of logs, evidencing

a remarkably low water condition, the lowest to be recorded for a great number of years.

The Western Quebec Paper Mills, Limited, with a capital stock of \$250,000 and head offices in Montreal, have been granted a federal charter. The company are authorized to build, maintain and operate pulp and paper mills. Among the incorporators are Wm. K. McKeown and Chas. L. Austin, of Montreal.

The sawmill of Fraser & Co. at Deschenes, Que., which has been inoperative for several years, has been sold to William Freedman, Ottawa, who, it is understood, will dismantle the plant and sell the equipment. The mill was some years ago one of the largest and most flourishing in the Ottawa Valley.

The first hydroplane constructed in Canada has been completed by Canadian Vickers, Limited, Montreal. This is the first of six machines ordered by the Federal Government for forest patrol work. The wings and propellers are of Sitka spruce. The hydroplane has a capacity for six people. It has Rolls Royce engines of 375 horse power.

A substantial drop amounting to over a quarter of a million dollars took place in the estimated value of new building in Ottawa during July. During the first seven months of this year the estimated value of building and construction in Ottawa was less by over a million dollars than it was a year ago.

Herbert S. Springate has severed his connection with the Garrett Lumber Sales Ltd., and has opened an office in the Royal Bank building, New Westminster, B. C., under the name of H. S. Springate and Co. Mr. Springate will engage in the brokerage business in shingles and lumber, having been connected with the trade since he left school.

A federal charter has been granted to Calders (Canada) Limited, with a capital stock of \$1,000,000, and head office in Toronto. The company is empowered to buy, sell and deal in all kinds of timber, lumber, wood products, wood preservatives, oils and chemical materials and compounds. Among the incorporators are J. Lorne McDougall and A. W. Beament, of Ottawa.

M. Cuffling, formerly manager of E. J. Maxwell, Limited, Montreal, has joined the firm formerly known as McPeak and Fruitier, the partners in which were Messrs. W. J. McPeak & E. Fruitier. The business is now carried on as McPeak Cuffling & Fruitier, at Room 311, 103 St. Francis Xavier Street, Montreal, wholesale dealers in hard and softwoods, lath, ties and posts.

The amphibian type flying machine which was launched at Montreal reached the Government aerodrome at Ottawa lately. This is the first machine of the kind ever built in Canada. Two weeks ago the first two machines, which were built in England, were delivered. One was completely destroyed when it crashed as it was leaving the Rockcliffe field for Winnipeg. The other machine made the flight successfully. These machines will be used by the Government in forestry patrol and general survey work.

Canadian importers who are desirous of establishing connections with British manufacturers and ascertaining the best sources of supply, should avail themselves of the services rendered by the Information Bureau of the British Overseas Trade Association Ltd., of Imperial Buildings, 56 Kingsway, London. All such information is furnished free of charge, the Association having recently been formed to foster trade within the Empire and the gentlemen who are responsible for the organization are practical business men with many years experience of buying and selling in the export market.

John Glanville, of Thessalon, Ont., expects to have his entire winter cut of pulpwood, 7,500 cords delivered to the mills shortly. This means the distribution of \$60,000, or more, over a large territory, as the timber was purchased from settlers, most of whom only had small quantities to dispose of. The money will do an immense amount of good over the whole district, giving ready cash to hundreds of families when they need it most, and helping materially to clear up lands that they must be anxious to have in crops as soon as possible. Mr. Glanville has already delivered 5,000 cords to the mills.

E. S. R. Murray died recently at his home, 254 Douglas Ave., St. John, N.B., aged 70 years. Mr. Murray was for many years connected with the firm of Murray & Gregory, lumbermen, and his demise removes a well-known figure in the life of St. John. The late Mr. Murray was born at Kingsclear, York County, N.B., and about 16 years ago retired from active participation in business. For several years he had been in failing health. Mr. Murray was an ardent rifle man and only a few days before his death had been at the rifle ranges. He was a great lover of sport. His wife predeceased him by some four years and two sons, seven daughters and two sisters survive.

E. Griffith

P. O. Box 1273, Detroit, Mich.

Chas. Mellor, of Port Arthur, Ont., who some time ago was awarded the right to cut timber in townships lying east of the C.P.R. main line, near James Bay Junction, says that he does not intend to commence operations on the limit until towards the fall, which will be in cutting pulpwood. He does not contemplate building a sawmill as yet. The demand for lumber is very fair and while Mr. Mellor says he does not know of any shortage of labor, there is very little unemployment in the district.

If business is like unto the human system—improved by use—it ought to be mightily improved about now.

In looking around for the latest arrival don't confuse posterity for prosperity.

The most modern equipment will not do its best work if operated with obsolete methods.

Price cannot be compared with cost in buying woodworking machinery until the sales ledger has been examined.

The most successful business men are those who make the most use of the special knowledge of others.

Canadians are apt to think that their forests are illimitable and their supply of wood inexhaustible. This is not so. Fires and insects are depleting the reserves of forested land at an alarming rate and it has become a pressing national duty to conserve the forest resources and create new ones by reforestation.

J. S. Bock, of the Eagle Lumber Company, Limited, Montreal, has returned from a visit to the Abitibi district.

The Imperial Economic Conference which meets in London in October will consider the question of pulpwood and pulp in relation to Empire resources.

Canadian Construction & Lumber Company, Limited, Montreal, was recently formed to erect buildings and deal in all kinds of building materials. Capital \$199,000.

The Crystal Beach Planing Mill, Crystal Beach, Ont., report business at this season of the year very satisfactory. The firm have made a number of improvements in their woodworking plant lately.

The Railway Tie Cooperative Co., Limited, Ottawa, is a new firm recently formed to manufacture and deal in railway ties. Capital \$10,000.

The lower mill of the P. Bain Sawmills at Hatzic Prairie, B. C., was totally destroyed by fire recently. P. Bain, who is a large lumber operator, has three sawmills in this district, an upper and lower sawmill, and a small tie mill, also a shingle mill. The mill burnt down had been in operation about two years and had about six months' more cut to finish. The cause of the fire is unknown.

Elihu Wigle, of Leamington, Ont., has remodeled his mill and has now a sawing floor that is not outclassed by any small mill. The mill is equipped with overhead cant, steel carriage with Waterous double action set, gun shot feed, live rolls, Waterous double edger and trimmer. Mr. Wigle will cut out about one million feet of soft elm lumber during the season, and at present is putting up an addition for the purpose of making his lower grade lumber into fish boxes.

The E. B. Eddy Company of Hull, Que., as a matter of form has again appealed against the valuation of its plant by the city assessor, Mr. Eugene St. Jean, who has assessed it for municipal taxes on a valuation of \$7,200,000. This valuation was placed on the plant last year upon the expiry of the period for which the company was granted an exemption of taxes, and the appeal in this instance is still before the courts.

The sawmill of J. Wilson Campsall at Harrowsmith, Ont., was wiped out by fire recently. It is believed that the blaze was caused by spontaneous combustion in a pile of sawdust. There was no insurance carried on the plant. The sawmill was an old landmark in the village and was operating every day, and the loss will be severely felt. The plant manufactured cheese boxes, shingles and other building material.

The Algoma Central Railway is carrying about 30 cars of pulpwood per day at the present time. The major portion of this is for the Spanish River Pulp and Paper Company at Sault Ste. Marie, Ont., but several cars a day are being taken to Michipicoten to be loaded on boats for transportation to the Port Huron Pulp and Sulphite Company. This company is taking pulpwood from Michipicoten at the rate of a cargo per week. These cargoes run at from 600 to 700 cords.

The Fletcher Lumber Co., of Windsor, Ont., are not erecting a planing mill as has been reported. They are moving a certain portion of the machinery which was not entirely destroyed by fire from the Haugh Company property over to their own plant and are putting it in a workable condition. It is not the intention of the Fletcher Lumber Co. to do a great deal of factory work as they expect to purchase the best part of this stock ready run.

Even though the labor demands of the western farmers and those in the Province have not been satisfied for the harvest, employers of labor for lumber companies are already arranging for workmen for their camps this fall and winter. The Government Employment Service under Superintendent William Meath, at Toronto, stated that lumber camps would absorb any surplus labor this year. He said it was the first occasion on which the Service had received an order for bush labor so early in the year.

The New Ontario Government will not intervene to compel the Great Lakes Pulp and Paper Company to locate in Shuniah, or at any site other than that approved by the Drury Government just before its exit. Premier Ferguson made the definite statement recently that the old Government having settled the matter, as was its right, the new Government would observe the engagements entered into. This presumably disposes finally of the whole question of power and

power prices in the equal-rate district surrounding Fort William and Port Arthur.

Expenditure of upwards of \$60,000 will be undertaken by the McLean Shingle Company, Port Coquitlam, B. C., in the immediate future on the rebuilding of the shingle mill at the junction of the Pitt and Fraser rivers, according to J. H. McLean, manager and president. The mill was recently destroyed by fire of unknown origin.

F. Villeneuve Lumber Co. Limited, of Walkerville, Ont., which was recently granted a charter, was established 20 years ago by F. Villeneuve in his own name. Previous to entering the retail lumber line, Mr. Villeneuve was superintendent and buyer of the Globe Furniture Co., of Walkerville. His associates in the business are his sons, Walter Villeneuve, being secretary-treasurer, general-manager and director and Leo J. Villeneuve superintendent and director. T. J. Villeneuve is a director, while F. Villeneuve is the president.

The Abernethy-Lougheed Logging Co. at Port Haney, B. C., are not taking any chances for forest fires this year. They have a number of rangers patrolling the forests night and day and are expending \$1500 per month in fire prevention measures. The company is one of the best equipped for fire fighting in the province and \$8,000 have been expended in additional equipment this year. Last year there was a serious fire in the company's limits and a large quantity of valuable timber was destroyed. This year there has been only one outbreak so far.

An attempt on the part of a farmer, Robert Anderson, to burn out a hornet's nest near Jones Creek, Ont., caused a bush fire which threatened to assume serious proportions and which was responsible for assistance sent from Brockville. During the day a call for assistance was also received by the local department from the townships of Leeds and Lansdowne, where, in a tract of 400 acres of bush land between Oak Leaf and Lyndhurst, a serious fire had broken out. Farmers for miles around, led by Lt.-Col. A. W. Gray, M.P.P., fought the fire all day.

The McNeil Lumber Co. Limited, of Montreal, will conduct extensive operations on the limit purchased from the McCool estate. They are making preparations for fall and winter activities and will erect a band mill at Eau Claire Station which is twelve miles west of Mattawa Junction. It is the intention of the McNeil Lumber Co., to cut about 5,000,000 feet of hardwood lumber and 100,000 hardwood ties. The mill will also be equipped for making shims. M. J. McNeil, who is the president of the company, is going over the limit for the location of the roads and camps, having particularly in view the possibilities for using tractors for hauling on the main roads to the mill yard and mill pond.

Right Hon. W. L. Mackenzie King, Prime Minister of Canada, in greeting the delegates to the Empire Forestry Convention at the Victoria Memorial Museum, Ottawa, said that the Government of Canada will do all possible to avoid the imposition of an embargo on pulpwood going into the American Republic. His views on the matter seemed pointed and decisive when he said: we recognize that to restrict trade in any direction is the last measure to which a Government should resort and we are hoping that the benefits which will accrue to our forests from consultation and conference with Forestry experts from all parts of the British Empire and through our own commission, may yet find a better way of dealing with the economic development of our forest resources.

The Alfred McDonald Lumber Co. have been operating their sawmill in Peterboro, Ont., at full capacity since June 30th and will cut through until late in the fall. The company will saw this season about two and a half million feet in all, about 75% of which will be white pine, the balance being Norway pine, spruce, hemlock, basswood, elm and ash. The company have considerable cedar which will be converted into shingles and railway ties. During the past spring the firm installed in their sawmill a new William Hamilton lath mill and will have a good cut of lath. The box factory, sash and door plant and planing mill are running full time. In these departments during the past few months several changes have been made and new machines added which will not only increase the output but improve the quality.

The 32nd annual meeting of the Concatenated Order of Hoo Hoo will be held in New Orleans September 8th to 12th. Many large lumber associations and companies are co-operating with the Order and the programme will be interesting and edifying. Speakers of national prominence will address the meeting and the New Orleans committee has worked faithfully and diligently in bringing about plans so that the entertainment and comfort of all the Hoo-Hoo and their families will be well looked after. It is believed that the largest and most representative attendance ever known in the history of the organization will be present.

GOODHUE BELTING

FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue." According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 13 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum, with internal gear in place of 16 in. drum when desired.

MONTREAL - GALT - TORONTO

They averaged 17 cords per load

After exhaustively testing their first Northern "Caterpillar"* Logger last winter, making closest comparisons in costs and results with other methods and machines, the Mt. Murray Woodlands Corporation of Mt. Murray, Quebec, has now standardized on "Holt" and purchased four more of these powerful tractors for next winter's operations.

Hauling day and night over common snow roads with many bad grades, each load averaged around 17 cords of green unbarked spruce, a remarkable record over those roads. By the end of last season the total cordage, the continuous operation, number of trips, low costs and the ability of the "Caterpillar" to meet every situation, convinced the Mt. Murray officials that no other machine or method can successfully compete with the "Caterpillar."

Let us give you further facts about remarkable "Caterpillar" records on this, as well as on other Canadian pulpwood and lumber operations.

**There is but one "Caterpillar"—Holt builds it*

What's Doing in the Lumber Industry?

IMPORTANT developments have taken place during the last year; important changes are in process of making right now, and there is speculation on many points of vital interest to everyone in the industry.

Canada Lumberman Annual Number (Out Sep. 15)

will deal in a comprehensive, intimate way with many of the big problems that now engage the attention of its readers.

It will be an issue filled from cover to cover with live, practical matter—an issue of absorbing interest to the big men in this big industry.

The advertising value of such an issue will be obvious. It will be on the desk of many a buyer, not only of lumber, but also of supplies for camp and mill, of machinery and equipment, for months, and will be consulted frequently and read carefully.

To Advertisers :

Have you arranged for the extra space you should use in this wonderful issue

Reservations already received assure representation from the important firms, and the Annual Number will constitute practically a directory of those selling in or to the Canadian Lumber industry.

Early instructions are desirable.

To Purchasing Agents of Groceries and Camp Supplies

Is our name on your Requisition List?

LANGLOIS & PARADIS, LTD.

19 ST. JAMES ST., QUEBEC CITY

Relieve the Box Shook Shortage By the use of Gerlach Box Board Mills

For the cutting of
BOX, CRATE, CHAIR, FURNITURE, CABINET and
other dimension stock, LATH, HANDLE MATERIAL, Etc.
These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 40" Long

All cut any required thickness from $\frac{1}{4}$ " to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf $\frac{1}{8}$ ". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00 per M ft.
SAWING & OVERHEAD	2.00 " "
NET COST	10.00 " "

Long Clear and Barrelled Pork

The word "quality" has so often been misused in describing camp supplies that we hesitate to use it. To those operators and chefs who are familiar with our products the word "Swift's" is synonymous with quality, and offers them greater security in placing their orders.

Swift's long, clear and barrelled pork is carefully selected. It comes to your camp perfectly packed and carried to your siding in our own refrigerator cars. This is the result of our many years experience in supplying the lumber industry.

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

Elk Fire Brick Co. of Canada, Ltd.

A MATCHER WHICH WILL RUN RANDOM WIDTHS OF STOCK AND PRODUCE SQUARE EDGE OR SHIPLAP AS YOU WISH

A special device attached to our No. 91 High Speed Planer and Matcher permits the operator to change instantly from square edge to shiplap stock or reverse the process and change for various widths up to the capacity of the machine, without leaving his position at the infeeding end.

This matcher is chain driven. Hence the machine is quiet and smooth-running and power is delivered to the feed rolls evenly. Upkeep of a chain driven machine is exceedingly small as compared with those gear driven. Chains are lubricated automatically.

Feed works are exceptionally powerful. Heads used are of the Six Knife round type and are fitted with our patented slip-proof Gib which prevents knives slipping while the bolts are being tightened.

These are some of the features of Yates No. 91 Planer and Matcher with Adjustable Side Heads. Upon request we will send you full particulars about this machine.

A CRANE PRESSURE REGULATOR WHICH TRANSFORMS HIGHER PRESSURES TO ANY CONSTANT PRESSURE

INCREASING THE UTILITY OF A PLANT

Low pressure steam or air delivery direct from higher pressure mains and constant pressure delivery are possible with Crane pressure regulators. Steam at the correct pressure for small power units or low pressure heating, constant pressure steam for process heating and air for blasts, heaters, and low pressure tools can be taken from higher pressure

mains through this automatic valve without loss of one bit of heat or energy. Crane pressure regulators are furnished with unions or flanged connections, for any reasonable capacity and working pressure. Let the Crane representative help you to increase the utility of your distribution piping with this dependable money-saving specialty.

"A Wonderful Piece of Engineering Skill"

said a mill man the other day, referring to this Band Resaw—a product of the E. Long shops. And this will be your opinion too, if you go as fully into its mechanical details as he has.

If you are in need of a Resaw that will turn out large quantities of well manufactured stock, get full particulars of this machine today.

Not Sufficient Refuse to Keep Burner Going

THE above is not a record of a few days or a few weeks, but is the usual state in a mill cutting 250,000 ft. per day with logs averaging 18 inches diameter.

The remarkable condition is due to the marvelous efficiency of the **Waterous Super Resaw** which is handling **all** the slabs and half logs in this mill.

The Waterous super resaw handles one slab at a time at high speed, consequently the sawyer is changing gauge continuously and each slab is subjected to quick analysis.

The feed is speeded faster than the man can get the slabs into the machine, leaving a space of about 18 inches between the ends of the slabs and permitting the setter to change the size instantly so that every available inch of good lumber is obtained from each slab.

In the Waterous super resaw the slab and the board separate instantly by gravity, the slab falling on the slasher chains and the board going to the edger.

Why not investigate the wonderful possibilities of this machine?

ATKINS

STERLING QUALITY SAWS

Good Saws, Saw Tools and Machine Knives

are necessary for speed, economy and efficient production.

They are the deciding factor in the success of any sawmill, furniture factory or woodworking plant. Thousands of saw users know, because they have convinced themselves, that the installation of Atkins Saws, Tools and Machine Knives means more and better work with larger profits.

Give Atkins a Trial

We will make good with our products and convince you that they are what we claim in our slogan.

"The Finest on Earth"

Leading manufacturers of Saws, Saw Tools and Machine Knives, also Atkins-Coleman Feed Rollers. Use Acrolite and Ferrolite Wheels for your saw gumming and knife grinding. Increase your belt efficiency by using Cantol Belt Wax.

Twin Circular Machine

Above cut illustrates one design of Twin or Span Circular used for slabbing logs for the gang or for making ties. With this machine chain feed is used. We also manufacture other designs with steam or rope feed.

The chain feed circular shown above will slab logs 16 ft. long into cants from 16" down to 4" in thickness, and this style of feed meets with most favor from millmen.

The saw frames are adjustable by rack and pinion controlled by handwheel with locking device, and a flat scale marked off at the mill shows distance between saws at all times. Saws used vary from 42" to 50" in diameter.

A special centering device operated by 6" steam cylinder is used to place logs to best advantage on track before going through the saws and the slabs coming off behind the machine are taken care of by means of chains or rollers.

The drive for feed chains which is variable is controlled by Sawyer and can be stopped or started at will.

Standard length of track supplied when cutting 16 ft. logs is 56 feet.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

Metropolitan Bldg.

Department C-L-1

VANCOUVER, CANADA

Edge-Grain Shingle

We illustrate here an EDGE-GRAIN SHINGLE. You will note that the grain of the wood is vertical and parallel. The result is that when an Edge-Grain Shingle becomes moist, then dries, all stresses and strains are absolutely parallel and equal, with the result that an Edge-Grain Shingle cannot warp, cup, curl or split.

Flat-Grain Shingle

We illustrate here the ordinary flat-grain shingle, which will warp, cup and curl. The reason for this is explained by the fact that when a cedar log absorbs moisture, then dries out, it shrinks more than twice as much in the direction of the circumference as it does in the direction of the diameter. Likewise, when a shingle cut with flat-grain becomes moist and dries, it, too, shrinks more than twice as much in one direction as in another. The result of these UNEQUAL stresses and strains causes warping.

GOLDEN AIR-DRIED SPRUCE

Has no superior among mountain woods. Test it out by ordering a sample car.

In addition to operating the largest sawmill in the interior of British Columbia (daily 10-hour cutting capacity 200,000 feet) we are fortunate in having a good variety of timber and can supply FIR, CEDAR and WHITE PINE as well as SPRUCE.

We particularly recommend our FIR DIMENSION. Our CEDAR makes excellent Boards and Shiplap, also a good cheap Siding or Ceiling. Our 1½" and 2" Log Run WHITE PINE, 4" and wider, is a splendid stock.

GOLDEN SPRUCE is unsurpassable for Boards, Shiplap, Shelving, etc., etc.

All orders are run through the planing mill at time of shipment, resulting in stock arriving at destination bright, clean and newly milled. We guarantee PROMPT SHIPMENT and can be depended upon for RUSH SHIPMENT when required.

Our Eastern Sales Office will be pleased to answer all inquiries.

Black Birch for Beautiful Floors

Wears as Well as the Hardest Maple

The increasing sale of Birch Flooring is due to its natural beauty and the fact that it holds and absorbs the finishing oils and stain better than any other hardwood. Black Birch yields wood of two colors—white and red. "Selected White" can be finished in any desired shade to harmonize with the interior trim. "Selected Red" becomes a rich mahogany floor and is being chosen for the drawing rooms of Canada's finest homes.

Clear, No. 1 and No. 2 Flooring which is sold irrespective of color, meets the requirements of schools, offices and public buildings where the wear is considerable. Muskoka-grown Birch wears as well as hard Maple and is much more uniform in color.

"Red Deer" Brand Birch Flooring is Birch at its best. It will increase your sales.

BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Helping Along the Home Building Movement

There are Many People Able and Willing to Undertake the Purchase of a Home, but Most of Them Need Financial Help and Sound Advice to put Them in Home Owner Class—This Article Outlines Practical Methods to Create Increased Building That Would Otherwise Never be Undertaken

Any movement that will aid in home-building operations and cause a local structural campaign to be started, invariably benefits the retail lumberman. Building and loan associations in divers parts of the United States and, in a few centres in Canada, are doing their share to encourage tenants and young married couples to translate a desire of owning their own home into action and give practical outlet and expression to the thought that which many of these newly-weds entertain. At many lumbermen's gatherings the encouragement of home-building is discussed but the great difficulty with many "prospects" is that they cannot see their way clear to finance the building of a "dove cot." They have not saved up enough money and are diffident in regard to taking the risk in this period of climbing costs.

Any movement, that will result in facilitating home-building and aid in solving the financing thereof is worthy of consideration and support. Some practical thoughts on this subject were recently presented by Frank Favor, president of the Massachusetts Retail Lumber Dealers' Association, who declared that all yardmen were interested in pushing ahead home-building and arranging for the necessary loans so that work of this character could be carried on. Such structures utilize the largest share of lumber supplied by local yards.

Mr Favor went on to say that he had no doubt that the average man desiring to have a roof over his head was most sincere in his belief that he has or can arrange his finances to pay for all the labor and material bills that go to make the cost of the completed dwelling. Mr. Favor proceeded:—But I find, almost invariably, and I think I speak of the majority of the yards doing business today, that the home costs the owner more than he has planned and that after paying labor and other small items, he is short of funds sufficient to pay all the bills. My experience is that the lumber bill above all others is the last to be settled, and that it becomes necessary for the lumberman to take a small mortgage on the property. Now the lumberman being a substantial and reliable citizen in his community can usually borrow money on this mortgage as collateral at his bank. But this ties him up; it limits his borrowing capacity at his bank and eventually causes him many sleepless nights, dyspepsia,

nervousness, and other things, not to mention baldheadedness and wrinkles.

Letting Lumberman Have His Cash

How to correct this trouble and let the retail lumberman have his cash is a problem which has been satisfactorily solved in but few communities. In my city of Gardner, Massachusetts, there has been put into operation a plan which has worked out successfully.

We have a community of about 18,000 and we manufacture more chairs than any other place of our size in the world. Our public and get-to-gether spirit is strong. Sponsored by our local Chamber of Commerce, a Home Endorsement Committee was formed which works as follows:

A man living in a tenement decides that he would like to build and own a home. He buys a piece of land and arranges with a carpenter or contractor to build his house. When the work has progressed far enough, he places a mortgage either with a Savings Bank or a Building and Loan Association, which last we call Co-operative Banks in Massachusetts. When the home is completed, the owner makes application for financial help with our Home Endorsement Committee.

Let us take for example a house costing \$6,000 on which our Savings Bank has granted a loan of \$3,800. The man that is building the house must have at least 10 per cent. but we will assume that in this case, he has \$1,000. He will then apply for \$1,200 which is granted providing if after sufficient investigation, he is found to be steady, reliable and honest.

Public Spirited Business Men

Now this Home Endorsement Committee is made up of 102 substantial business men of our city who are interested in seeing the community grow and prosper. These men have signed the necessary papers agreeing to stand pro-rata any loss occasioned by taking second mortgages on new homes built in Gardner. These 102 guarantors have elected a committee of five to carry on the work of the whole and transact business for it. The committee investigates every application for assistance and if it has been found that the

(Continued on page 46)

An attractive bungalow effect has been obtained in this dwelling by bringing the roof down over the porch and the sunroom.

Brief Echoes of Great Forestry Conference

Delegates After Spending Some Time in Ontario and the East are Now Touring the Prairie Provinces—Proper Stock Taking of Canada's Resources Urgently Needed

The visit of the members of the British Empire Forestry Conference to the Ontario Government Experimental Station at St. Williams in Norfolk County, was most interesting and instructive. Lord Lovat, president of the conference, expressed much pleasure in regard to the skilled silviculture of cut-over woods, and the satisfactory plantation mixture of Scotch fir and larch. He was particularly struck with the plantation of red pine and the European plantations in various mixtures. Beautifully kept nurseries, 600 acres in extent, contained some ten to fifteen million plants. Certain ingenious methods of watering dry, sandy soil appealed to him greatly. Asked about the recent work of the British Forestry Commission, which he represents, his Lordship mentioned that the commission has reafforested 10,000 acres in Great Britain. Moreover, with the aid of unemployment grants, sundry private landowners and corporate bodies had planted another 10,000 and prepared a further 10,000 for planting this year when unemployment struck the country in the coming winter.

The members, while visiting St. Williams, were tendered a luncheon by the Women's Institute of Norfolk County. The delegates were much pleased with their visit and were greatly impressed with the possibilities of the nursery and with the efficiency with which the nursery was managed. Lord Lovat, in his address at the luncheon, stated that the nursery was an excellent example of what forestry could do to check permanently the progress of drifting sands, and of the work which could be accomplished in the preservation and regeneration of forest growth under proper scientific care and direction.

* * *

The delegates to the British Empire Forestry Conference paid a visit to Queen's Park, Toronto, and were officially received in the legislative chamber by Premier Ferguson and Hon. James Lyons, minister of lands and forests. The premier extended a hearty welcome to the visitors and hoped that their mission would be successful, of becoming thoroughly acquainted with the forestry resources not only of Canada, but of all other countries. They had in Ontario a wealth of natural resources that awaited development, and which would do a great deal to expand and enrich this country. The province was pursuing an advanced policy with respect to its forestry interests.

He hoped the result of the visit of the delegates would be to interest people from all countries who were desirous of improving their position and to acquaint them that opportunity awaited them in this country. The premier pointed out that the government of to-day, although only less than a month in office, was endeavoring to elaborate rather comprehensive plans towards securing a type of immigrant adapted to the needs of this country.

Hon. Mr. Lyons also made a few appropriate remarks and hoped that the visitors would obtain much valuable information in their tour. Lord Lovat briefly replied, and thought that Canada, in regard to its resources, had succeeded better than the country to the south, in looking to the future in regard to its resources. The delegates were grateful for the kindness which had been accorded them in Canada, and if they could be of assistance by giving information they obtained elsewhere they would be glad to do so.

* * *

W. Kynoch, Superintendent of the Forest Products Laboratories, Montreal, addressed the conference on forest products research. He stated that 50,000 tests on the strength properties of Canadian woods have been made to date by the Forest Products Laboratories. The question of the preservative treatment of railway ties, said Mr. Kynoch, is a very important one. There are 100,000,000 ties in use in Canada on railway lines. The life of these untreated ties is only six to seven years. Service tests are being conducted by the laboratories on treated ties in order to determine the processes which will give the greatest durability.

* * *

Sir James Calder, C.B.E., one of the British delegates, and largely interested in the timber trade in Great Britain, presented a paper which dealt with the European sources of supply of coniferous timbers open to the British market. The States surrounding the Baltic comprised the largest sources of supply of timber used in

Great Britain, said Sir James. The proportion obtained from Canada has fallen from 16 per cent. pre-war to 10 per cent. post-war, due to high freight rates from Canada and to favorable exchange with the timber-producing countries in Northern Europe.

In the future Russia will be the biggest single factor in European soft wood supply, as there are tremendous areas of valuable coniferous forests still unexploited. Describing conditions in the new States of Finland, Poland, Latvia, Esthonia and Lithuania, Sir James announced that these countries had largely placed their forest properties on a sound basis; that they were cutting in general not more than the annual growth produced in their forests.

In commenting on his observations during the recent tour of Eastern Canada, Sir James remarked that he was impressed with the fact that the manufacturing methods are not so economical in Canada as, for instance, in Sweden. He realized, however, that economic conditions were quite different. A feature of Sweden saw-mill practice was the very thin saws used, resulting in the minimum waste as sawdust.

* * *

Forest plantation work in the Dominion of New Zealand, was discussed by Mr. L. M. Ellis, Director of State Forests of New Zealand. The New Zealand Forest Service had found it possible in a measure to eliminate transplanting and to utilize the seedlings direct for final planting. New Zealand planted more trees per capita than any other section of the Empire. During 1922 over 12,000,000 plants were set out in state and private plantations of New Zealand.

* * *

The work of the commission in the British Isles was dealt with by Mr. R. L. Robinson, of the British Forestry Commission. He stated that the procedure in Great Britain followed the lines adopted in New Zealand. During 1922, 11,500 acres were planted with forest trees, of which all but 250 acres were conifers, mostly species obtained from the Pacific coast. It was interesting to note that the seed from which the stock was derived was collected a few years ago by the Dominion Forest Service. Twenty-two million plants were required to plant up the acreage in 1922. A detailed description of the organization and cost accounting methods employed by the British Forestry Commission concluded Mr. Robinson's address.

The morning session was concluded with an illustrated address by Prof. Troup, of Oxford University.

* * *

Owen Jones, Chairman of the Forest Commission of Victoria, Australia, claimed that 70 per cent. of forest fires were caused by carelessness. He thought that not legislation, but publicity, was the best remedial measure. C. G. Trevor, Forest Conservator in India,

G. H. Prince, Fredericton, N.B.
Chief Forester of New Brunswick

G. C. Piche, Quebec
Chief of P. Q. Forest Service

Quisbis Mountain Lookout Madawaska New Brunswick.

spoke of problems and protective measures in that country. D. Roy Cameron of the Dominion Forest Service claimed that 90 per cent. of forest fires were preventable. During the past five years there had been 28,896 forest fires in Canada, one-third of which covered areas of more than 10 acres. During those five years, he said, 10,000,000 acres had been burned over, with a property loss of \$72,000,000, in addition to which one must add loss of labor and the depreciation of the soil. Speaking of preventative methods in vogue in Canada, Mr. Cameron referred to the aeroplane patrols, and added that some 80,000 head of live stock grazing in the national forests, by keeping down the accumulation of dead grass, afforded a real help in fire protection.

* * *

It was decided to adopt Lord Lovat's advice that a five year conference he held. It was thought that there should be some permanent official appointed to serve as a connecting link between conventions and it was suggested that Lord Lovat could serve in this capacity if he were appointed President of the Conference with continuous tenure of the office. It was agreed that the delegates to the next conference should be drawn from timber users as well as timber growers to a still greater extent than was observed at this convention. Canada's part in inaugurating this policy was commended by the delegates.

* * *

Speaking for Canada, E. H. Finlayson, Acting Director of Forestry, announced that no great changes in policy had been affected, but that despite financial stringency the funds provided for forestry work had been maintained and even slightly increased. A revised forest act had been prepared and it was hoped would be passed before long. The abolishment of the Commission of the Conservation had resulted in taking over the forestry functions of that body by the Dominion Forest Service, thus giving greater consolidation of activities. The administration of timber on Dominion lands had not yet been co-ordinated, Mr. Finlayson stated. Distribution of forest trees to farmers on the western prairies had progressed steadily. Over 5,000,000 trees were distributed during 1922. Work in silvicultural research had also progressed although much remained to be done.

* * *

Speaking before the British Empire Forestry Conference recently, in Ottawa, E. J. Zavitz, chief forester for Ontario, stated that one of the hardest problems to combat in Ontario forestry work was the practice, followed by many prospectors, of burning off the bush to expose minerals. G. H. Prince, chief forester for New Brunswick, stated that in his province fire prevention was the most important consideration. New Brunswick had experienced a very bad fire last spring and general sentiment now recognized the absolute necessity of exercising greater precautions to prevent such losses. P. Z. Caverhill, chief forester for British Columbia, expressed the view that, while it was necessary to have fire protection before they could have proper forest management, it would be impossible to delay the inauguration of forest management until fires are completely eliminated. Mr. Caverhill raised the point as to whether some responsibility did not accrue to Canada as a whole, and possibly to the Empire also, to aid the province of British Columbia in solving its forest fire problems.

* * *

J. A. Wilson, secretary of the Royal Canadian Air Force, discussed what could be accomplished in the way of fire-ranging with the aid of the aeroplane. He said that 80 per cent. of all civil flying carried out in the last three years had been in connection with forestry work. Dealing with the question of undue expense which had been raised in some quarters, Mr. Wilson said that this was one of the problems which air officials had to solve. He believed that the time was coming when small, single-seater machines, using no more gasoline than a Ford car, could be used in forestry patrol.

* * *

Roland D. Craig, of the Canadian Forest Service, Ottawa, spoke on the softwood resources of Canada, commented on the fact that the statistics available were very incomplete and that the primary need of forest policy in Canada was a proper stock taking of Canada's timber resources. Some work had been done in that connection. The Commission of Conservation made an estimate for British Columbia and Nova Scotia, and an inventory of Ontario commenced by that commission was being completed by the Dominion forest service in co-operation with the provincial forest service of Ontario. New Brunswick had surveyed 60 per cent. of the Crown lands of that province. The total stand of merchantable soft wood saw material in Canada was estimated at 440,000,000,000 feet board measure, or 96,000,000,000 cubic feet, and the total stand of merchantable timber of all classes which included besides saw material pulpwood, ties, poles, etc., was estimated at 198,000,000,000 cubic feet. During 1920 over 2,600,000,000 cubic feet was cut, the value of which was \$312,680,000. Such utilization, however, represented only a portion of

the drain on the forest resources of this country. Fire, insects, fungi and wasteful operations resulted in the destruction of several times the amount of timber annually used by the industries. Loss by fire had amounted to 790,000,000 cubic feet per annum on the average for the last five-year period. Insects alone had destroyed pulpwood in Quebec and New Brunswick sufficient to supply the present needs of the pulp and paper industries for a period of 29 years. Waste in exploitation was tremendous. Frequently up to 25 per cent. of the stand was left in the woods to become a prey to the almost inevitable fire.

* * *

Colonel Henry Solon Graves, director of the Yale Forest School, New Haven, Mass., stated that although three-quarters of the original soft wood forests of the United States had been cut over, it had been estimated that that country still contained more soft wood timber than any other country except Russia. The United States is using her timber three or four times as fast as it is growing, he continued. In addition to the problem of bridging this gap, the country is faced with the fact that only one-fifth of the country's forest lands is publicly owned. The remaining four-fifths has been alienated to private owners. Col. Graves pointed out that superficially the country still has enormous resources. Nearly two thousand billion feet might seem inexhaustible to the lay mind, but economically, the fact that most of the stock lay over 2,000 miles from the point of ultimate consumption, meant that the country was in a serious predicament.

* * *

The New Brunswick wood resources made a striking impression upon the members of the Empire Forestry delegates, who visited that province recently. Lord Lovat said that the natural regeneration, from what he had seen, was unequalled in any other part of the Empire, and he expressed a belief that, except in rare instances, reforestation would be unnecessary for nature provided the means in a much better manner and more cheaply than man could do.

At the banquet tendered the members of the party while in St. John, the assemblage was addressed by Hon. C. W. Robinson, Minister of Lands and Mines. He spoke of the importance in the coming of the distinguished guests and was proud that they had seen fit to visit this part of the country. Mr. Robinson said that New Brunswick has some of the best timber resources in Canada, but the loss from the bud worm during the last few years had been greater than the amount of lumber cut for many years. He thought that the forestry department was a credit to the province. The government, he added, was alive to the necessity of preserving the forests, but it was felt that there was no necessity for artificial reforestation in New Brunswick because nature had provided for this in a wondrous way. The very best brains in the country were needed to conserve the timber resources. He explained that, with proper methods and under the right conditions, the timber cut could be greatly increased and still provide more adequately for the future.

Mr. Robinson said that the province welcomed the visitors with open arms and wanted to obtain from them all the information they could give which might assist in preserving and utilizing to the best advantage the forest resources.

The visitors went to Great Salmon River and made frequent stops enroute to examine forest conditions on the property of the Pejepscot Paper Company. Special pains were taken to enable the guests to learn the points of interest along the way. Signboards numbered 1 to 26 had been erected along the way through the whole wooded region and there was placed in the hands of each member a printed leaflet telling exactly what to expect or look for at that place. The first four related to slash as a fire hazard, or the result of a fire from slash. Another called attention to softwood reproduction coming abundantly in abandoned fields; another to the ravages of the budworm, another to lots cut over that are being held for a future crop of pulpwood so dense as to prevent reproduction; another to a mixture of yellow birch and softwood; another to the salvaging for pulpwood of the tops of trees cut for long lumber and construction timber, another to a plantation of Norway and red spruce, etc. At the plantation of Norway spruce Lord Lovat's quick eye detected a drooping top and immediately he said, "you have the white pine weevil here." He snapped off the top and proved his assertion.

It was pointed out that the Pejepscot Paper Company has 96,000 acres of timberland in New Brunswick. Its intention is to study the yield of the property and cut saw-logs and pulpwood perpetually, the cut for each year equalling the growth. This year it aims to cut 3,500,000 feet of saw logs and 20,000 cords of pulpwood. It is operating in areas swept by the bud-worm salvaging what it can, but the damage is great. The company is also planning to make experiments in thinning and girdling worthless hardwoods. It employs two foresters. The visitors also inspected the company's large mill where long timber is being cut for the New York and New England markets.

Standard Sizes Favored by Many Retailers

Odd Lengths are Not Endorsed and Should Not be Included in the Standard Grading Specifications Along with Even Lengths—Some Recommendations

A great many replies have been made to the comprehensive questionnaire on Lumber Size Standardization, mailed out to thousands of retailers in all parts of the country under authority of the Permanent Standardization Committee of Lumber Retailers of the United States. The questionnaire dealt with a number of major propositions before the lumber industry for decision, and on which definite or final action will be taken by all departments of the lumber industry at a conference planned for this Fall in Washington, D. C. Many more questionnaire replies are being constantly received, so that a final tabulation of them may be impossible for another month or more. Nevertheless, a report on the returns thus far will be of interest.

In the report herewith the several recommendations are taken up in the same order as listed in the questionnaire.

RECOMMENDATION: That 13-16 in. be adopted as minimum thickness of the Standard "factory and "box" boards.

Of the 1,363 questionnaires so far returned practically all who voted on this proposition are in favor of 13-16 in. Twenty-eight voted negatively, and practically all of these consider that 7-8 in. is far more desirable for a factory board than 13-16 in.

RECOMMENDATION: That 24-32 in. S1S or S2S be adopted as the minimum thickness of the Standard retail yard board.

One hundred seventy-four voted in favor of 25-32 in. and 1,169 for 13-16 in. These replies came from 49 states and show 48 states voting in favor of 13-16 in. and 1 state in favor of 25-32 in. While it may be true that the great bulk of boards shipped at present are only $\frac{3}{4}$ in. in thickness the vote on this question shows that dealers believe that 13-16 in., even at a higher cost, would be preferable and would give better service.

RECOMMENDATION: That $1\frac{5}{8}$ in. S1S or S2S be adopted as the minimum thickness for all standard dimensions not more than 12 in. wide.

Replies received to date show 378 dealers voting for $1\frac{3}{4}$ in. and 952 dealers for $1\frac{3}{4}$ in. Thirteen states favor $1\frac{5}{8}$ in. and 29 states $1\frac{3}{4}$ in., the vote in 7 other states being evenly divided.

RECOMMENDATION: That $3\frac{5}{8}$ in., $5\frac{5}{8}$ in., $7\frac{1}{2}$ in. and $11\frac{1}{2}$ in. S1E or S2E be adopted as the standard finished widths of boards, dimensions and finish.

Four hundred eighty-one dealers are of the opinion that this recommendation would result in satisfactory standard finished widths of boards, dimension and finish and 787 dealers are of the opinion that such widths would not be satisfactory. An extremely large number of those voting negatively on this recommendation state that $\frac{1}{4}$ in. less than the full widths is the maximum that should be necessary and permitted when surfacing boards, dimensions and finish on the edges.

The interest displayed by the dealers from all parts of the country in this recommendation is noteworthy and a great many comments have been made to the effect that boards particularly should be full width when dry, and with the edges left rough. Dealers in large cities as well as in small country towns appear to have far more complaints on widths than on thickness.

RECOMMENDATION: That the terms "Inch Board" and "2 inch Dimension" be dropped and in the interest of sound business the terms "Standard Board" and "Standard Dimension" be used instead.

Two hundred and fourteen dealers voted favorably, 1,071 negatively and for the retention of the present terms. The vote also showed that the retail lumber dealers are opposed to any change from the firmly established board unit of measurement.

RECOMMENDATION: That consideration be given to the general production of $\frac{1}{2}$ in. Boards when not over 8 in. wide.

Four hundred and eighty-two dealers voted favorably, 655 dealers negatively. Some are in favor of even wider than 8 in. in $\frac{1}{2}$ in. boards and call attention to the importance of this class boards for panel stock. Many who recorded an affirmative vote did so with the qualification that $\frac{1}{2}$ in. boards be full $\frac{1}{2}$ in. thick.

RECOMMENDATION: That the standard weights to be used in determining thickness and width shall be the commercially dry shipping weights of the regional groups of manufacturers issued after approval of the Central Committee on Lumber Standards and in effect when shipment is made.

The meaning of this recommendation is that when there is

complaint on thickness or width the determination of whether the thickness and width are not as required shall take weight into consideration. Eight hundred and twenty-two dealers voted favorably on this proposition and two hundred and fifty-six negatively. Quite a large number did not record a vote on this consideration.

Recommendation of Minority Group

The preceding Recommendations are those supported by the majority of lumber manufacturers. The Minority, the North Carolina Pine Manufacturers Association, recommends the following:

1. A system of measurement.
2. Rigid Adherence to that system.

That, therefore, the following be recommended:

a. The recognition of the rule of board measurement as the system in use in this country, and that it be designated as the American system.

b. That it is the obligation of the manufacturer to put his product in condition for commercial use and to that end all necessary waste, shrinkage and depreciation are properly borne by the manufacturer.

c. That lumber in the rough, when in condition for commercial use, shall be full to the indicated dimension with an allowance of a certain definite percentage for unavoidable variances from the exact size.

d. That for dressing lumber the allowance shall be limited to that which is necessary to accomplish the purpose.

e. That the standard thickness of lumber for yard and shop uses are as follows: $\frac{3}{4}$ in., 1 in., $1\frac{1}{4}$ in., $1\frac{1}{2}$ in., $1\frac{3}{4}$ in., 2 in., 3 in., 4 in. The standard widths, are as follows: 4 in., 6 in., 8 in., 10 in., 12 in., etc., every additional width being two inches wider than the preceding one. That any intermediate thickness or width be considered as special.

f. That for structural sizes the thicknesses and widths begin at six inches every additional width or thickness being two inches greater than the preceding one, and that any intermediate thickness or width be considered as special.

Six hundred and fifteen dealers voted favorable on these recommendations, many holding them to be preferable to the other recommendations. Four hundred and fifty-one dealers voted negatively, many of these being in full accord with N. Carolina lumber manufacturers except for one thing, namely, the suggestion that there be two standards for dimension, viz. 2 in. rough and $1\frac{3}{4}$ in. rough. Some suggested that 5 in. should be added as a standard width for boards. Others suggested structural sizes begin with 4 in. thickness instead of with 6 in.

Odd Lengths and Short Lengths

There is no definite recommendation before the industry on these two propositions but the advisability has been tentatively suggested of the including both odd lengths and short lengths in the Standard Grade Specifications. The question has been placed in the hands of Special Committee for intensive study and on this Committee the retail lumber dealers are ably represented by F. J. Ward of Eclipse Lumber Company, Clinton, Iowa, and past president of the Northwestern Lumbermen's Association. The appointment was made by Mr. Guy Gray, of Cleveland, Ohio, vice-Chairman of the Consulting Group of the Retailers.

The comments by the dealers on these two important matters are worthy of a special article and such will be issued. For the present it will suffice to state that the dealers are overwhelmingly opposed to the tentative recommendations. Twelve hundred and eighty-five voted negatively and thirty-three affirmatively on odd lengths while eleven hundred and ninety-eight dealers voted negatively on short lengths and 100 affirmatively.

Opposed to Odd Lengths

The vote indicates very definitely the retail lumber dealers are strongly opposed to odd lengths (except for 2x4—9 foot) being included in the Standard Grade Specifications. They are opposed to this because (a) the odd foot is wasted in selling—that is, the dealer gets paid for the next shorter even length; (b) studs, as customary placed, make odd lengths impractical; (c) odd lengths stock would increase the necessary retail yard and shed capacity and, therefore, add to expense; (d) odd lengths would very greatly increase cost of

handling lumber at retail and the extra cost of doing business would more than offset advantages presumably gained as to conservation of timber supply.

The vote on short lengths does not mean that dealers are unwilling to help market a fair proportion of shorts. It means rather that dealers believe shorts should be marketed separately from present standard lengths and at a price that will move them. It also means they are unalterably opposed to the inclusion of odd lengths with short lengths. The comments show that dealers, generally speaking, believe that shorter stock than 8 foot is impractical for retail yard purposes except a limited amount in uppers and they are very emphatic that short flooring should be end matched. Dealers believe the manufacturers should create a demand for short length stock.

It can all be summed up as follows: Short and odd lengths should be sold separately, priced low, and shipped only on specific orders of the buyer. They should not be included in the Standard Grade Specifications along with even and the present standard lengths.

A detailed tabulation of questionnaire replies by states will be made at a future time, when all replies have been received and counted.

Dealers Want Quebec Lien Law Amended

The Province of Quebec Retail Lumber Dealers' Association are co-operating with the Montreal Builders' Exchange and the suppliers of builders' materials in order to secure an amendment of the Quebec Lien Law, which it is contended does not give adequate protection to those who supply materials. A meeting was held at the Builders' Exchange on August 8th to consider an amendment to the law. Mr. K. D. Church presided. Lieut. Col. E. G. M. Cape and D. Bremner represented the contractors' section of the Exchange; Mr. J. Donahue the sub-contractors' section; Messrs. A. T. Alexander; J. P. Dupuis and Stewart F. Rutherford, the suppliers of materials; Messrs. H. Lefebvre, secretary of the Builders' Exchange; A. Balfry, secretary of the Credit Information Bureau, and G. A. Thompson, secretary of the P. Q. Retail Lumber Dealers' Association, were also present.

A discussion took place on the limit of thirty days after the supply of material during which time a lien must be taken out and it was argued that this clause was satisfactory. Attention was drawn to the Ontario Mechanics' and Wage Earners' Lien Law of 1923 and particularly to Clause 2, page 10, Clause 6, and Clause 12, sub-clause 4, page 5. These clauses were also stated to be satisfactory.

Some discussion arose as to the case of a proprietor doing his own work. It was suggested that the suppliers of materials should register a lien inside of 30 days after completion of the work but, in the case of a contractor being employed by a proprietor, a lien on the property should be registered inside of 30 days after the first of the next month which followed sales.

With regard to disputed accounts under the Ontario Lien Law, it was pointed out that the supplier of material may register a lien on the property to the extent of 80 per cent. of the account and the remaining 20 per cent. may be brought before the court for adjustment, thus avoiding any tying up and preventing other liens being registered on the same property.

The following committee was appointed to study the clauses in the Ontario Act which are of interest to the suppliers of building material:—Messrs. A. T. Alexander, (Chairman) and D. Bremner, representing the Builders' Exchange; J. P. Dupuis, retail lumber dealers; G. Benoit, Credit Information Bureau, and J. Laverty, Dominion Credit Association. Messrs. Balfry, Lefebvre and Thompson will act as joint secretaries.

Messrs. J. P. Dupuis and D. Bremner were requested to take legal advice on certain points.

The Assignment of Book Debts Act

There was passed at the last session of the Ontario Legislature an act entitled "The Assignment of Book Debts," which is now in force. This act known as No. 199 concerns lumbermen, woodworkers and others, and according to information sent out recently by the Secretary of the Wholesale Lumber Dealers' Association, Inc., Toronto, provides that an assignment, mortgage or other charge upon book debts or accounts, shall be null and void as against the creditors of the assignor unless such assignment

- (a) is in writing;
- (b) is accompanied by certain specified affidavits;
- (c) is registered together with the affidavits within twenty-one days of the execution thereof.

The clause relating to registration of assignments is as follows: "The assignment shall be registered in the office of the clerk of the county or district court of the county or district in which the person making the assignment resides at the time of the execution thereof, or where the assignor is a company, in the office of the

clerk of the county or district court of the county or district in which the head office of the company is situate, or in the case of a company having its head office out of Ontario, in the office of the clerk of the county or district court of some one of the counties or districts within which the company has a branch or carries on business within Ontario."

National Retail Association at Louisville

The seventh annual convention of the National Retail Lumber Dealers' Association will be held at the Seelbach Hotel, Louisville, Ky., on October 9th, 10th and 11th. A number of interesting features at the biggest national gathering in the history of the retail lumber business is being looked forward to. It is likely that a visit will be paid by the delegates to the world-famous Mammoth Cave close to Louisville. Alfred Pfund, 820 Railway Exchange, Chicago, is the secretary-manager of the National Retail Lumber Dealers' Association.

This year the travelling salesmen will be invited as well as the shippers from whom the retailers buy. There will be no trade exhibit at the convention but all interested in any commodity handled in the retail lumber yard are cordially invited for the business programme.

Progressive Gananoque Firm Has Model Yard

One of the best laid out and neatly-kept lumber yards in Eastern Ontario is that of Mitchell & Wilson, Limited, Gananoque, Ont., who are dealers in lumber and builders' supplies and also carry out contracts.

The yard is laid out in four streets with piles on each side. All the piles are on 6 x 6 and 8 x 8 timbers placed on concrete buttments. All lumber, except that which is thoroughly dry, is piled with lath between each layer and the fronts and sides. All piles are kept separate and plumb.

The yard is bounded on the north and east sides by streets, on the south side by a railway siding and on the west by the St. Lawrence River where the firm have a dock and boathouse. The lime house and cement shed are on the railway siding. In the northeast corner is situated the factory and the office, which is built of reinforced concrete.

The north side is closed from the street by corrugated iron lumber sheds. Mitchell & Wilson have a closed structure 50 x 60 feet, two storeys high, and open shed 20 x 120 feet. All dressed lumber and upper grades of pine, B. C. cedar and fir are kept under cover. On account of the nearness of the yard to the river and the high ground it occupies, drainage is rendered unnecessary.

In the factory of Mitchell & Wilson, which is well equipped, general mill and custom work is done and frames, sash, interior trim, etc., turned out. For the unloading of cars, the firm use a truck and two trailers. The former is employed for general delivery purposes and between trips it pulls the loaded trailers from the siding to the lumber piles.

The business of Mitchell & Wilson was established over thirty years ago and continued under that name until January of last year when it was incorporated as a joint stock company under the name of Mitchell & Wilson, Limited.

How Cheque Artist Victimizes Lumbermen

A cheque swindler is frequently abroad and his method of operation is sometimes novel and original and at other times ordinary and stereotyped. It is a favorite pastime of such a swindler to enter an office of a retail lumber merchant, representing that he comes from an adjoining town and is putting up a valuable building. He then presents a correct bill of material for the structure, asking the lumberman if he can supply the required lengths and thicknesses, as well as the different kinds, quantities, etc. If he receives an answer in the affirmative and has established a fairly friendly footing with the yardman by ordering the material, he makes out or hands over in advance an apparently valid cheque but of rather large amount. He promises to call for the lumber later in the day or week and receives in cold cash the difference between the face value of the cheque and his lumber bill. The paper comes back marked, "no funds," and the would-be purchaser fails to turn up for the goods that he ordered.

Recently one of these swindlers, a man 60 years old, who had been operating in several towns across the border and victimizing lumber merchants, was sentenced to serve a prison term of ten years.

The Boake Mfg. Co., Limited, Dartnell Ave., Toronto, have purchased a mill site and will likely start the building of a new mill next spring.

Montreal Lumbermen in Jolly Golf Tourney

It was Great Day on the Links and There Was Keen Competition for Various Premiums. Tie for First Prize and Play-off Was Necessary.

The clerk of the weather was in a propitious mood on August 15th when the Montreal lumbermen's golf tournament—18 hole, medal play—was held at the Beaconsfield Links. It was a great day, ideal for golf, except that in the early part of the morning a strong wind prevailed. Heavy rain the previous night had put the links into good condition.

The tournament was the outcome of a suggestion by two or three members of the wholesale section. A committee, consisting of Messrs. C. Villiers, J. Buchanan, W. B. Blair, E. C. Plant, Arthur H. Campbell, A. Fenton and W. H. Cote, was formed, and promises of cups were promptly forthcoming from Mr. E. H. Lemay, the "Canada Lumberman," Mr. Arthur H. Campbell and Mr. L. G. Gravel. Through the good offices of Mr. Plant, the Beaconsfield Golf Club placed their links at the disposal of the lumbermen. The organization of the contest involved a considerable amount of work but the large gathering and an enjoyable day proved that it was not in vain.

The tournament was open to the entire lumber trade of the city and entries were received from representatives of every section. The original entries numbered 28, but these were reduced to 23 actual players—and the Montreal lumber trade includes some who are counted among the best in the city.

The following were among those present, besides those who played and whose names will be found below:—Messrs. J. S. Bock, Eagle Lumber Co., Chairman of the Montreal Wholesale Lumber Dealers' Association; G. Lebel, president of the P. Q. Retail Lumber Dealers' Association; J. P. Dupuis, president of the Montreal section of that Association; W. A. Filion, of E. H. Lemay; G. Church, Church & Church, Limited; O. Page, Cardinal & Page; F. H. Stearns & Co.; W. B. Blair and O. Blair, Blair Bros., Limited; A. J. Smith, Albert J. Smith Lumber Co., Limited; L. W. Halliady, William Rutherford & Sons Co., Limited; M. J. McNeil and U. E. Germain, McNeil Lumber Co., Limited; A. W. Barnhill; J. Villeneuve; J. H. Gareau, Federal Lumber Co.; A. Beaudette, Muskoka Wood Mfg. Co., Limited; H. Wood, of C. M. Bartram; A. Grafftey, Montreal Lumber Co.; J. C. Poitevin, Plouffe & Poitevin; G. Grafftey; H. Stocker, Sherbrooke; R. Williams, Williams Lumber Co., Ottawa.

Hon. A. David, Provincial Secretary, had been invited but sent a letter regretting inability to be present owing to an out-of-town engagement.

The contest was followed by a luncheon at which nearly 60 per cent. were present. Mr. J. Buchanan presided.

Play commenced at an early hour, the contestants teeing off at

intervals of about five minutes. The following are the names of those playing, together with their net scores:—A. Fenton (Riordon Co., Limited), 112; J. W. Harding (Quebec Hardwoods, Limited), 107; J. Buchanan (James Buchanan Lumber Co.) 77; F. T. Smith, 86; E. C. Plant (E. C. Plant Lumber Co., Limited) 77; Claude Villiers (Canadian General Lumber Co., Limited) 78; E. B. Maxwell (E. J. Maxwell, Limited) 90; P. M. Jost (The Jost Co., Limited) 79; R. Robinson (G. A. Grier & Sons, Limited) 87; H. Blouin (W. H. Cote Lumber Co., Limited) 99; H. E. McKeen (the Jost Co., Limited) 77; E. R. L. Henry-Anderson (Riordon Co., Limited) 75; W. T. Mason (Mason Gordon & Co., Limited) 143; Roy Campbell, (Riordon Co., Limited) 81; J. L. G. Brown (Riordon Co., Limited) 84; Arthur H. Campbell (Campbell, McLaurin Lumber Co., Limited) 75; W. Duncan (J. & W. Duncan, Limited) 76; F. M. Benson (Riordon Co., Limited) 107; P. Pare (G. A. Grier & Sons, Limited) 80; W. Sutherland (G. & J. Esplin, Limited) 78; W. H. Cote (W. H. Cote Lumber Co., Limited) 96; A. D. Huff, (Riordon Co. Limited) 94; F. A. Badger (the Jost Co., Limited) 90; H. J. Webb (Riordon Co., Limited) 83; E. M. Ball, 122.

As Mr. Arthur H. Campbell and Mr. E. R. L. Henry-Anderson were tied for the first prize, each with 75, a play-off was necessary. This resulted, after a strenuous contest, in the victory of Mr. Henry-Anderson, with a score of 77 against that of 79 for Mr. Campbell. This proved the most exciting match of the day. Mr. Campbell held an advantage on his handicap up to the last hole when he made a stroke which put the ball down a hill at the side of the green, among rocks. Although he made a fine recovery, the hole took ten strokes against five strokes by Mr. Henry-Anderson, who won by two strokes.

The second prize was secured by Mr. Campbell, while the third was won by Mr. W. Duncan. Mr. J. Buchanan took the cup for the best gross score, with 84, which gave him a net 77. This prize should have gone to Mr. Henry-Anderson who turned in a card of 80, but as he was the winner of the first prize for the best net score, (no entrant could win two prizes) the best gross cup went to Mr. Buchanan.

The cups were afterwards presented, Mr. W. A. Filion handing over the first prize for the best net score (donated by Mr. E. H. Lemay) to Mr. W. Duncan, the second prize for the second best net, to Mr. A. H. Campbell, the third prize for the best net (donated by Mr. L. G. Gravel) to Mr. W. Duncan and Mr. F. H. Devenish the prize for the best gross (donated by the "Canada Lumberman") to Mr. J. Buchanan.

Happy expressions of the lumbermen golfers as caught by an artist of the "Montreal Star"

Helping Along Homebuilding Movement

(Continued from page 39)

householder is worthy he gives this committee of five a second mortgage on his house. This second mortgage together with a note signed by the committee of five representing and endorsed by the 102 business men, is given to a local bank for a loan of the requested amount.

The Committee of five figure out with the householder the amount which he can pay monthly without depriving himself and family of the necessities of life. He pays into the bank holding the second mortgage, a payment that will gradually reduce his second mortgage. He pays no higher rate of interest than the bank charges, which is the lowest rate obtainable, and no bonus is paid in any way for the accommodation. Suppose this same house owner decides to place his first mortgage in a Co-operative Bank. In this instance, he pays only a small monthly payment on his second mortgage together with the interest, and when he has paid enough on the first mortgage to warrant, the committee discharges the second mortgage.

This scheme has worked well in Gardner and I think it will in any community up to 20,000. Beyond that, the plan would hardly be very feasible.

The moral influence behind this scheme or plan is fine. Many people have enough money to build a house above the amount which they may borrow on a first mortgage. But they do not dare place a second mortgage. When the sort of help which we are providing is available, they will go ahead and build a house, often finding that they can complete the work without any financial assistance.

As a safeguard against undesirable tenement houses being constructed, it is particularly stated that loans shall be considered on one and two family homes only.

Another thing that we do is to make all second mortgages on demand so that if at any time the committee find things are not running smoothly and the householder is neglecting to pay his interest, taxes, or letting the property depreciate, they can step in and whip him into line or take the property if necessary. It is a pleasure to state that up to this time, not one payment is in arrears on the loans we have made on a second mortgage. We have found that a man will dig in and pay for his house if he has his own money in the house to the extent of ten per cent. of the value.

If this plan were worked out in other communities, it would relieve the retail lumbermen of one of their worries at least.

Eastern Lumbermen Oppose Extra Rate Levied by Workmen's Compensation Board

A notice recently appeared in the Royal Gazette which is published at Fredericton, N. B. The reference to further assessment under the Workmen's Compensation Act is signed by John A. Sinclair, chairman of the Board and is as follows:—

Notice is hereby given that under and by virtue of the powers conferred on this Board by the Workmen's Compensation Act, 1918, every employer who shall engage in any of the industries named below shall be and is further assessed, in addition to all previous assessments, at the rate mentioned opposite the name of such industry, upon the amount of the payroll of such employer (or otherwise, as the case may be) to be ascertained as provided in the said Act;

Class 2

Sawmills; manufacture of pulp or paper; woodworking; planing mills; furniture factories; wicker and rattan work; logging; cutting of timber; pulpwood, firewood, railroad ties or sleepers; river driving, rafting, booming or the transportation of logs, timber, pulpwood, firewood, railroad ties or sleepers; boat building, coffins, canoes, organs, pianos, artificial limbs.

Name of Industry	Rate
Artificial limbs; wicker and rattan work; wooden articles; bed springs; boat building not over 25 feet; manufacture of canoes; coffins; cooperage; hand work; carpenter, joiner, or cabinet work (shop only), furniture manufacture, including assembling; installation of pipe organs; mattress making; upholstering organs and pianos; picture framing50
Sawmills; shingle mills; lath mills; box, barrel and shook mills; excelsior manufacture; lumber yard including delivery of lumber carried on in connection with sawmills; wood cutters 3.00
Planing and moulding mills; sash and door factories, including lumber yards and delivery in connection with same; commercial lumber yards 2.00
Logging, cutting of timber, pulpwood, firewood, railroad ties or sleepers; river driving; rafting; booming or the transportation of logs, timber pulpwood, firewood; hauling lumber 4.00
Pulp mills or pulp and paper mills 2.00

This further assessment will be payable in installments as determined by the Workmen's Compensation Board.

In connection with the recent doubling of the rates of assessment on the lumbering industry of New Brunswick, it may be stated that logging and lumbering are now paying 8 per cent. The present rate is 4 per cent. and the extra assessment, as set forth in the Royal Gazette, is another 4 per cent., making 8 per cent. in all.

The New Brunswick Lumbermen's Association have been fighting the Workmen's Compensation Board of that province for the past two or three years and have on various grounds, entered strong objections to its levies. The doubling of the rate would appear to be the last straw, and one leading operator stated the other day that 8

per cent. is prohibitive and lumbering in that or any other province could not stand it.

A special general meeting of the New Brunswick Lumbermen's Association has been called for Tuesday September 4th, at Fredericton, to consider this extra assessment and take such action as may be deemed advisable to protect the members. New Brunswick millmen say that, owing to the Board's inefficiency, the present results have been brought about. One member states "The Workmen's Compensation Board claims that we, the lumbermen, are not paying our way and that our assessments have not reached the amount paid out by the Board for deaths, accidents, etc., by some \$160,000 or \$170,000. As lumbermen, we strongly controvert and resent this claim because practically all, if not all, our lumbering concerns of any size are paying in by way of assessment anywhere from 30 per cent. to 50 per cent. more than the Board pays out for accidents, etc."

It is understood that the New Brunswick government has retained the services of an expert accountant, Mr. Chalk, from Price, Waterhouse & Co., to investigate fully the finances, actions and policy of the Board since its inception. The idea is to get complete information regarding the earnings of the Board so that the conditions which have prevailed regarding compensation may be modified by legislation not later than next session. It is understood that Mr. Chalk has almost completed his labors and will shortly submit a report to the provincial government.

More Lookout Towers for New Brunswick

The erection of a new seventy foot steel lookout tower for forest fire protection purposes has been completed on an elevation five miles south of St. Quentin, in the county of Restigouche, N. B. This lookout commands a view in all directions ranging between 20 and 30 miles and including all the settlement area of St. Quentin and Kedgewick. Telephone communication has been established with a line running between Kedgewick and St. Quentin and will later be linked up with St. Leonards and the N. B. Telephone Company's system when plans are completed.

Another lookout tower will be erected in Restigouche County on Blue Mountain on the head of the Benjamin river. This tower will be erected jointly by the Department of Lands and Mines and the Geodetic Survey and will probably be completed by fall.

The highest elevation secured in the erection of a lookout tower in the province has been obtained in the completion recently of a cabin lookout which has been placed on Mount Carleton in Gloucester county at an elevation of 2,700 feet. Practically an unlimited view is obtained from this lookout which has direct communication with the town of Bathurst.

The erection of lookout towers for fire protection purposes has continued throughout the Dominion, Ontario now possessing 180 such vantage points while Quebec has added a number to those already in use, according to reports made at the British Empire Forestry Conference.

Budget of News Briefs from Busy East

Hon. C. W. Robinson, Minister of Lands and Mines, recently said with regard to the burnt timber problem, which is pressing for solution as a result of the devastating fires in the northern section of New Brunswick early this summer, that the lessees must log the burnt timber this season or lease the tracts to those who will. He declared that he expected to be in a position to announce the Department's policy with regard to the logging of the burnt over country in a short time.

An area of seven hundred square miles had been covered by fires in the province this season and it is estimated that one million feet of lumber is standing in a more or less damaged condition. The problem is how to remove the timber in so short a time as possible so as to preserve merchantable qualities.

* * *

Dr. J. D. Tothill, of Fredericton, N.B., returned recently from the head-waters of the Tobique where he inspected a considerable area of the fire swept timber lands. He said that eggs of boring insects, which cause the damage to the burnt timber as it stands, have been laid in immense quantities and that the prospect is that the borers will work their will on all timber which cannot be removed.

* * *

Many operators, who have limits in the country covered by fires, have already started crews logging burnt trees. It is felt, however, that only a minor portion can be logged during the season, possibly 400,000 feet. During succeeding seasons it is believed that the damage will be so great that the value of the timber will be greatly depreciated.

* * *

Mr. Justice Chandler in Chambers recently handed down a decision in the Buckley case, which is of interest to lumbermen in this part of the country. It was a case of the Buckley Estate of Newcastle, N.B., vs. the Liverpool, London and Globe Insurance Companies and others. Following a fire, which destroyed their lumber, the Buckley Estate claimed \$112,000 from the insurance companies as the valuation of the amount burned. The case eventually found its way into the court and Judge Chandler, in delivering judgment, placed the valuation at \$24,800, but reserved decision in the matter of costs.

* * *

A mill, owned by Theodore Bosse and situated near Edmundston, N.B., was recently destroyed by fire. The mill was in operation about a year. The cause of the fire is unknown.

* * *

The Department of Lands and Mines recently gazetted an official notice that in future only autumn burning of slash, stumps or brush will be permitted. Such burning being forbidden in the spring. In autumn it will be permitted only when under the supervision of a fire warden, when general conditions are safe and at a place at least fifty feet from any forest.

* * *

There is a portion of the province of New Brunswick and an adjoining one in Nova Scotia that has been rather hard hit by the purchase of extensive lumber properties by Americans. These properties were for years the scene of active lumbering operations, providing labor for men and teams and a market for supplies. The new owners are holding them in reserve and, as a result, the loss in work such a course entails is said to be a serious matter for the localities interested.

* * *

During the month of August the Province of New Brunswick was again threatened by serious forest fires and for a time it was feared that there would be a re-occurrence of the conflagrations which swept through the northern section earlier in the season. Heavy rains, however, have the day and extinguished a fire four miles west of Campbellton, in Restigouche county, which was spreading rapidly in a valuable timber section.

* * *

All restriction on woods travel in the province of New Brunswick has been withdrawn according to an announcement given out recently by the Department of Lands and Mines. This was due to heavy rain falls, which eliminated the danger of forest fires. The

removal of the restriction does not mean that woods-travel can become general, but that on the issue of travel-permits the holders can enter the forests for fishing or other purposes.

* * *

Damage estimated at \$25,000 was done recently by a disastrous fire, which destroyed the planing mill of William Sullivan, Limited, and in addition wiped out over 5,000,000 feet of dressed lumber. Fire fighters from Newcastle and Craigsville aided the mill men in their successful efforts to save the large Sullivan sawmill, which is situated near Nelson, N.B. Among the buildings destroyed were the planing mill, office, boarding house, cook-house, a dwelling and two barns. A strong wind fanned the flames and for a time it was feared the villages of Nowlansville and Craigsville were doomed. The fire originated in the Sullivan planing mill. All the mills in Nelson were shut down and their crews rushed to the scene. There is said to have been about \$80,000 insurance on the lumber.

* * *

An important lumber deal was recently consummated in Weymouth, N.S., when the large timber holdings of the Stehelin estate passed into the hands of a big syndicate. This valuable timber property is considered to be the greatest holding of virgin timber in the lower provinces and consists of upwards of 10,000 acres on which it is estimated there are from 80,000,000 to 100,000,000 feet of marketable lumber. It has been practically untouched and fortunately there have been no forest fires to devastate these valuable holdings. It was acquired by the late Emile Stehelin more than a quarter of a century ago. When he first came from France he erected a mill and other buildings about twelve miles from Weymouth and called the settlement New France. Later he connected this settlement with Weymouth by a log railroad, but he only did sufficient lumbering to pay his expenses. Even at that, it necessitated the building of tote roads through the woods and the erection of dams on streams for driving purposes. It is said that the offices of the new company will be in Weymouth and it is expected that shipping will be done from that port. As a result citizens of Weymouth are looking forward to a return of the former prosperous times when lumbering was in its prime in that section of the country.

"This Is the House That Jack"—Did Not Build; and the Reasons Why

IF THERE is any one phase of present economic conditions in this country more clear to the general public than another it is the so-called housing situation. No community is free from the annoyance and actual suffering due to lack of proper dwellings, no class or individual immune from the blight, business and social, inevitably resulting from restricted living quarters and high rentals.

Inadequate housing facilities mean more than discomfort. The health of a nation is jeopardized. The newly elected Senator from New York, Royal S. Copeland, when Health Commissioner declared: "We shall face every epidemic with grave concern until the men and women, boys and girls, of New York are properly housed."

The pertinent question is:

Why is the country witnessing today the astonishing spectacle of slowing-up of building programs?

The illustration on this page graphically presents one vitally important reason. Wages in the building trades have mounted and pyramided until practically the entire housing development of the country has reached the limit of capital's ability to progress.

It has been claimed that the high cost of building material should share in the blame. The president of the National Federation of Construction Industries stated that labor is estimated as 85 per cent of the building cost, adding, "This includes, of course the labor which goes into preparing raw material for construction purposes."

Within the past few weeks, at a meeting in New York of the American Construction Council, of which Mr. F. D. Roosevelt is president, it was declared that calling a halt to new construction was necessary to bring down "steadily mounting costs" in the industry. The following official statement was made:

Regardless of what the different opinions may be as to the reasonableness of a wage of \$15 or \$18 a day for skilled mechanics, we know that under present conditions these scales will soon stop building operations and leave the laborer in a more unfavorable position than he will occupy under steady employment at a lower wage.

And in that is the crux of the whole situation. It is a curious anomaly to find that labor is homeless or penalized by extortionate rents because labor demands the impossible in wages.

How high wages of labor has caused building operation to slow down

They Would Strike While "On the Job"

To strike on the job instead of to strike off the job seems now to be the settled policy of the I.W.W. lumber industry workers, says the National Lumber Manufacturers Association. The word has gone out from Chicago to all I.W.W. lumber workers to hold their jobs as far as possible and at the same time, through passive sabotage, make lumber production so unprofitable as to result in its termination. A recent number of the Lumber Workers' Bulletin, an I.W.W. sheet published in Chicago, instructs its followers in these words:

"The employing class lives on our labor. It has to pay us wages, which are a part of what we produce, and everything else we make for it is its profit on which it exists. When we cut down the profits—we starve capitalism. That is the only way it can be hurt. When we strike off the job, we stop the profits, but we stop the expenses too. Now we must all be on the job, drawing wages, but making no profit for the boss.

"It is not necessary to break any laws to do this. Figure out just how little work you can do, and get by. Do that, and no more. Let every I.W.W. member point out to the unorganized that there is plenty of chance to get another job, if one is fired. Let no faller slaughter the virgin forest too recklessly. Let no buckler slash into the logs too hurriedly. Remember that this is dangerous work, and every precaution should be taken to preserve human lives. Go slow. Rigging men, choker setters, loaders, donkey firers, remember that too rapid labor under the hot summer sun induces sun-stroke. Don't do it. Don't get out too many logs. Remember that when you have worked two hours, you have produced enough value to support yourself. Everything you do after that time is the boss's—is a present to your enemy—and the enemy of your class! Take it easy. The boss will use all the profit you give him to oppress you, to build prisons for you, to hire gunmen to shoot you as Fellow Worker McKay was shot in Aberdeen. Don't put these guns into the hands of your enemies. Go slow.

"Everybody on the job—and everybody loaf. Organize all the time. Spread literature, talk to the uneducated, and hinder profits continually. These are our tactics from now on until the next strike off the job."

Old Square Timberman is Centenarian

Lewis Swenor, of Rossmore, Prince Edward County, Ont., recently celebrated his 100th birthday and a big celebration was held in his honor. He starts the second century of his life in good health. Greetings were extended by many public men including Hon. Nelson Parliament, former Speaker of the Ontario Legislature, W. W. Anderson, Ex. Warden of Prince Edward County and others. Mr. Swenor early in life was engaged in rafting square timber on the St. Lawrence, and in 1837 at the time of the battle of the Windmill near Prescott, he and his party were held up and not allowed to proceed up the river with a tow barge.

Mr. Swenor is an early riser and always retires early and today enjoys a healthy appetite his only impairment being a slight deafness. His wife died 23 years ago. For some time Mr. Swenor made square timber between Rossmore and Carrying Place in Prince Edward County, and, with his brother rafted it down from the head of the bay of Quinte sailing when there was a wind or rowing when it was calm down the River St. Lawrence to Quebec. They had a bear cub for some time which was their mascot.

Must Register Loans on Forest Products

A new section of the Canadian Bank Act of importance to lumbermen was added during the last session of the Parliament of Canada and came into effect on August 1st, 1923.

The new section is known as "88A" and makes it necessary for banks to register loans secured upon products of the forest, etc., in return for loans. The wording of the new section is as follows:

"88A. (Notice of intention to give security.) Any person intending to give a bank security under the authority of section eighty-eight of this Act must give notice of such intention before any loan is made by the bank to such person and the security taken, by signing a document which may be in the form set out in Schedule F to this Act or to the like effect. (To be registered.) Such document shall be registered in the manner hereinafter provided, and, after this section comes into force, any security subsequently taken under the authority of section eighty-eight of this Act, before such document is registered, shall be null and void as against the creditors of such person and as against subsequent purchasers or mortgagees in good faith. A notice of intention when registered shall be deemed to

be notice for the purpose of this section in respect of all securities

"4. (Cancellation.) The notice of intention may be cancelled by the Assistant Receiver in the book containing such registration at the place where the registration is entered on receipt by him from the bank named in the document registered of a certificate duly signed on behalf of the bank to the effect that each and every security under section 88 given to the bank by the person has been released, or that no security was given to the bank, as the case may be, and such certificate shall bear on the face thereof the number and date endorsed on the original document on file in the office of the Assistant Receiver. The Assistant Receiver shall number consecutively every release received by him and shall endorse thereon the number and the hour and date of its receipt and shall file the release.

"5. (Registration open to inspection.) Every person, upon payment of the proper fees, shall have access to and be entitled to inspect the registration book and any document registered or filed pursuant to this section.

"6. (Fees.) For services under this Act, the Assistant Receiver shall be entitled to the following fees, for which he shall be accountable to the Consolidated Revenue Fund:

For registration of each notice and endorsement of copy .25c.

For production of any notice for inspection25c.

For production of any notice for inspection25c.

For registration of each certificate of release25c.

"7. (Date.) This section shall come into force on the first day of August, nineteen hundred and twenty-three."

Attention is also called to Sub-section 3 of Section 89, dealing with the matter of sales of securities by the bank to satisfy their liens in cases of non-payment at maturity. This sub-section provides the customary right to sell the security.

In reference to sales of saw-logs, railway ties and lumber, it provides that: "No sale, without the consent in writing of the owner of any products of the forest shall be made under this Act until notice of the time and place of such sale has been given by a registered letter, mailed in the post office, post paid, to the last known residence of the pledgor thereof, at least thirty days prior to the sale thereof." taken by the bank from such person, under said authority, during the period of three years after the date of registration.

"2. (Where to be registered.) The document mentioned in the last preceding sub-section shall be registered in the office of the Assistant Receiver General (hereinafter called the Assistant Receiver) in the province in which the place of business, or principal place of business in case the person has more than one place of business, of the person is situate. If the person has no place of business then the document shall be registered in the office of the Assistant Receiver in the province in which such person resides. ('Place of business' and 'principal place of business' shall, in the case of a company incorporated in Canada, be deemed to be the place where the head office or chief place of business of the company is situate, or if a foreign corporation, then the place of business of such corporation for the purposes of this section shall be the place at which civil process in the province in which the loan is made can be served upon the company. 'Assistant Receiver' in this section includes anyone acting for the Assistant Receiver.

"3. (Manner of registration.) The Assistant Receiver shall number consecutively every notice received by him and shall endorse thereon the number and the hour and date of receiving it, and shall file the notice and enter, in alphabetical order, in a book to be kept by him, the name of every person who has given notice of such intention, with the number endorsed thereon opposite to each name. The Assistant Receiver shall endorse over his signature on a copy of the document, to be supplied by the bank, for the records of the bank, the date of registration and number, and the production of the copy with such endorsement and signature shall be conclusive evidence in all courts of the registration and of the time of registration as thereon endorsed.

WARNING

Unless immediate and drastic measures are taken to stop the export of raw wood and losses from forest fires, Canadian newspapers will be importing high-priced newsprint from the United States within five years. American paper companies are closing down practically all cutting operations in their own country, and are quickly transferring all woods operations to the Canadian side, so as to save their own supply and thereby put Canadian mills out of business as speedily as possible, exports of raw wood from Canada having already increased 150% in June, as per Government report.

Montreal,

FRANK J. D. BARNJUM.

Value of Empire Forestry Conference

Great Britain, the Dominions, Colonies and possessions are becoming more and more imperialistic. This does not mean that a spirit of jingoism is being fostered, but that the Empire is being knit closer together and that the people as a whole are recognizing the value of co-operative effort for the promotion of mutual interests.

The British Empire Forestry Convention, which has been holding its meetings in Canada, is an expression of this movement and of the trend towards trading within the Empire, which was so strongly advocated by Joseph Chamberlain. The exchange of ideas at such conferences is a necessary preliminary to joint action in the matter of finding ways and means to make the Empire self-sustaining in its timber supply. This may not be wholly possible but the information as to the resources of the Empire will, at least, enable the delegates to form a good idea as to the possibilities in the way of supplies and to formulate measures for conserving and increasing those supplies. The United Kingdom is the chief purchaser of lumber within the Empire and in 1920 bought 85 per cent. of her requirements from various countries. Other parts of the Empire are also large customers for lumber which is imported from countries outside the Empire. The Forestry Conference can, by interchanging information, do something in the direction of cutting down this heavy expenditure outside the Empire.

The subjects discussed covered a wide area, including the "World's Softwood Supply," artificial and natural regeneration, forest fire protection, forest entomology and pathology, trade in forest products, forest products research and hardwoods. These cover both the commercial and technical aspects as it is obvious that it is just as important to consider the point as it is to consider the question of securing a permanent supply of wood and of protecting that now in existence.

The first conference was held in London and it was appropriate that the second should be held here, in view of the fact that Canada has about one-half of the total 900,000 square miles of effective forests within the Empire. Unfortunately fire and insects are rapidly depleting those resources while wasteful methods have also played their part in reducing our forest wealth. The hope has been expressed that the conference will contribute something worth while in the way of alleviating the situation.

The delegates have been given every opportunity of inspecting our forests and lumber mills and of judging of the importance of this trade and of the pulp and paper industry of Canada. The pro-

gramme has involved a visit from the extreme East to the extreme West, enabling the delegates to note the difference in logging and other methods, and of estimating the value of Canada as a source of supply for other parts of the Empire. Canada has given a royal welcome to the "greatest conference on forestry that has been held in the Empire," to use the phrase of Lord Lovat, the chairman of the conference.

How Playing Golf Broadens Men

The Montreal lumbermen's golf tournament, the results of which will be found on another page, is an example of social gatherings which make for the consolidation of an industry. As Mr. J. S. Bock, chairman of the Montreal Wholesale Lumber Association, puts it:—"Any function which will make for the improvement of relations between sections of a trade, is of real value to that trade." The improvement may be of slow growth but it is certain to come. Too often men engaged in a given line are almost complete strangers; they may transact business by mail or telephone or may meet in a business way, but there is no co-operation between them in trade matters nor is there any of that social spirit which to foster friendliness and eradicates suspicion.

We shall always have competition but it is obvious that courteous and friendly rivalry is more desirable than that which is characterized by cut-throat methods. The best way of eliminating such competition is by the cultivation of a feeling of goodwill, by getting men to understand one another and, by such events as picnics and golf tournaments, establish common grounds for members of a trade meeting and enjoying a social day. These associations, indeed, are calculated to improve relations all around.

Is Artificial Lumber Practical?

Experiments in the making of "artificial" lumber are arousing increasing interest among government officials and leaders in the lumber industry.

Although none of the product has been marketed, officials of the National Lumber Manufacturers Association declare that tests already made of a synthetic composition produced by Minnesota lumber interests show it possesses many qualities making it available for structural purposes.

The experiments are based on somewhat the same principle as that employed in the manufacture of paper from wood pulp. In the process not only the trunks and branches of young trees, but the leaves and smaller parts as well are ground up and mixed with other substances, virtually eliminating waste. The resulting compound is capable of being moulded into sizes and shapes of almost any description needed in building.

Officials of the Lumber Manufacturers Association declare that if a practical method of this sort can be perfected, the result may be to revolutionize the entire lumber industry. Aside from utilizing the present great waste in converting trees into usable lumber, they say, it presents a solution to the manufacturers' problem of finding sufficient material in the country's rapidly diminishing timber resources.

From the time the standing tree is turned by the sawmill into planks and boards and applied in construction, from 60 to 65 per cent. has been wasted. This includes stumps, chips, bark and branches; plank and log trimmings and a huge amount of sawdust. The new method will use all of this.

It Isn't Your Town—It's You

If you want to live in the kind of a town
Like the kind of a town you like,
You needn't slip your clothes in a grip
And start on a long, long hike.
You'll only find what you left behind,
For there's nothing that's really new.
It's a knock at yourself when you knock your town.
It isn't the town—it's you.

Real towns are not made by men afraid
Lest somebody else gets ahead,
When everyone works and nobody shirks,
You can raise a town from the dead.
And if while you make your personal stake,
Your neighbours can make one, too,
Your town will be what you want to see.
It isn't the town—it's you.

Newsy Paragraphs of Lumber Activities

A. E. Roberts, of the B. C. Lumber Commission, Toronto, returned lately after spending his holidays in Haliburton.

A. N. Dudley, wholesale lumber dealer, Toronto, and Mrs. Dudley, have returned from a visit to Quebec and other points.

H. S. Fergus, of the Toronto branch of G. A. Grier & Sons, has returned after spending a pleasant holiday up the Muskoka Lakes.

J. H. McDonald, of the British Columbia Manufacturing Co., Vancouver, B. C., called upon members of the lumber trade in Toronto, recently.

John J. Miller, of the Anderson-Miller Lumber Co., Toronto, and wife, have been on an extended motor trip to Long Island, New York and other points.

E. B. Ballentine, representing the Duncan Lumber Co., Vancouver, B.C., has recently arrived in Toronto and will look after the firm's interest in the East.

Mrs. Mary E. Conway, widow of John S. Murphy, a well-known lumberman of Quebec, died recently in that city in her 77th year. She leaves four daughters and two sons.

Hall Bros., Limited, wholesale lumber dealers, have removed their offices from the Crown Office Building to the Continental Life Building, corner of Bay and Richmond Sts., Toronto.

It is declared that the Fort William Paper Co., which is busy at the present time, is considering doubling its plant at Fort William. The mill at present has a capacity of 155 tons of newsprint daily.

The slump in the price of shingles has forced the Pitt River Shingle Company Ltd., at Port Coquitlam, B. C., to shut down their plant. The mill closed recently and will not reopen until the market strengthens.

A. K. Tyler, son of George K. Tyler, manager of the Montreal warehouse of Seaman, Kent Co., Limited, passed away recently in Toronto. He was on the sales staff of the Garlock Machinery Co. and enjoyed a large friendship in the woodworking industry.

W. B. Francis, of the John J. Soble Lumber Co., Inc., Rochester, N. Y., was a recent caller upon the trade in Toronto. He reports that the hardwood lumber business which has been rather quiet for the past ninety days, is getting better and quite a few woodworking industries are now in the market for limited quantities of lumber.

The lath market is fairly good at the present time and it is expected that it will pick up materially next month. So far as the shingle situation is concerned, it is topsy-turvy. Very few shingle mills on the Pacific Coast are in operation and prices in the East are very unstable. The demand is light with decidedly fluctuating quotations.

Recent convictions secured as a result of prosecutions instituted by Department of Lands and Mines for violations of the fire regulations have resulted in fines being imposed at Totagouche, Gloucester County on Fred Smith, Israel Imhoff and Randolph Smith for setting fires without a permit. Proceedings have also been started against Ernest B. Merchant of Upper Kintore.

Three hundred acres of good pulpwood land were destroyed at Ste. Anne in Madawaska County, N. B., by a fire supposed to have been set by Louis Ringuette lately. Action is being taken against Ringuette for violation of the fire regulations and it is expected that he will also be required to pay heavy damages to his neighbors as a result of the destruction of their pulpwood property.

Piers will be built and the harbor dredged at Matane, Que., as soon as arrangements can be completed and the necessary work done. A contract for the abutments will be awarded shortly by the federal government. When the improvements have been made it will be possible to ship pulpwood from the Gaspé peninsula from Matane. At present it is shipped by rail at large cost from Lévis.

Joseph Picard, manufacturer of Quebec City, who was recently appointed chairman of the Pulpwood Commission, which will investigate the advisability of an embargo on freehold pulpwood, is widely known in the Ancient Capital. He is secy-treas. and manager of the Rock City Tobacco Co., a chairman of the Quebec Catholic School Board and a former president of the Quebec Board of Trade.

According to reports received from Quebec and Ontario by provincial employment bureaus, it is expected there will be a very large out in the bush this year, particularly in Northeastern Ontario and Northern Quebec. A large number of men have already gone to the camps and help is scarce in certain sections. Wages are reported to be running all the way from \$40 to \$50 a month, which is an increase of \$5 to \$10 over last year.

W. E. Bigwood, president of Graves, Bigwood & Co., who some

time ago was seized with a stroke at his summer home at Byng Inlet, Ont., is making fair progress. Many friends in the lumber industry trust his recovery may be such that he will once again be able to take his place at the head of the large enterprises with which he has been so long associated. Mr. Bigwood is a former president of the Canadian Lumbermen's Association and has been brought to Toronto for treatment in the hospital.

The Victoria Chamber of Commerce will plead for one of the few remaining stretches of virgin forest on the public highway not yet touched by the lumbermen in British Columbia. At the Associated Boards of Trades' convention at Nanaimo, Secretary George I. Warren read a resolution to be presented by the chamber, calling upon the Provincial Government to secure a stretch of at least one-quarter mile on each side of the Island Highway for the preservation of the fine old Douglas fir trees on the west end of Cameron Lake, both to preserve the beauty of the scenery and as an advertisement of Vancouver Island's timber resources. The Government was asked to secure the stretch either by negotiation or by expropriation. To cut this timber would destroy one of the province's greatest scenic attractions, it was stated. The directors endorsed the resolution.

The Northern Pacific Logging Co. will start operations at Port Moody, B.C., in a few days. The mill, which has been shut down for some weeks, has been completely overhauled. It has seven cutting machines with a capacity of 200,000 shingles per nine-hour shift. This mill does not use shingle bolts, as is usually the case, but has special equipment to handle whole cedar logs. These are cut in the company's camp in Northern B.C. and are brought down in huge booms to the mill. The logs are taken into the mill as they are, and cut off into rounds of the proper length. These go straight on to the machines and are cut into the standard size shingles. This method of handling reduces the costs of the raw material considerably, as a large amount of work is necessary to cut by hand and split the logs into bolts in the bush. This is an important factor now on account of the narrow margin upon which the shingle men are operating since the slump in the shingle prices.

British Capital Neglects Timber Interests

"A great proportion of the timber resources, logging enterprises, and sawmill companies of British Columbia are owned in the United States. Many areas of the best timberland are passing to Americans. To some extent this is a natural business condition, since the States are so near at hand, their timber resources are declining, and their experienced timbermen naturally cross an imaginary line upon the Western map. The complete lack of interest in this field shown by British capital has, however, intensified the transfer into American hands of this main softwood supply of the British Empire."

This statement is made by M. A. Grainger, in the course of an article on the Canadian lumber industry in the Timber Trades Section published with The Times Trade and Engineering Supplement. The writer also shows how ruthless exploration and the development of the pulp and paper industry have devastated the forests of North America, and how the last great reserves—Washington, Oregon, British Columbia, and Alaska—are now being penetrated.

Will Establish Forest Research Bureau

The Department of Lands and Forests of Quebec are engaged on a scheme for the establishment of bureaux of forest research in various parts of the province. The proposal is being advanced in connection with the efforts of the Government to encourage tree planting and the reforestation of devastated areas. A comprehensive programme has been arranged in this connection by the officers of the Forestry Service and in a short time it will be presented to Hon. Mr. Mercier, Minister of Lands and Forests.

At the last session of the Legislature, it will be remembered, provisions were made for the establishment of a paper school and a corps of forest rangers, but it is expected that at the next session further measures will be passed to allow for the expansion of the scheme. Two schools will in all probability be established, one in Quebec and one at the Government nurseries. At these schools, methods will be studied whereby the growth of trees may be encouraged both by natural and artificial means.

Particular attention will be paid to the tree seeds, their process of germination, their origin and the particular ground best suited to their needs. Tree, shrub and plant culture will be studied in detail. The schools will serve somewhat the same functions as the demonstration farms established throughout the province by the Government, with the exception that their activities will be confined to trees only. A sum of \$25,000 has been set aside by the Government for the furtherance of the scheme.

Mr. McLellan on Pulpwood Commission

R. W. McLellan, Fredericton, N.B.

R. W. McLellan, who has been appointed by the federal government as a member of the Royal Commission to enquire into the pulpwood resources of Canada and determine whether an embargo upon the export of pulpwood from freehold lands shall go into effect, is widely known in the Maritime Provinces. His selection as a member of the Commission is one which has met with wide approval from members of the lumbering, woodworking and pulp and paper interests. Mr. McLellan is a gentleman who is highly regarded by a large circle of friends for his breadth of vision, uprightness and business ability. For several years he has been the energetic secretary-treasurer of the New Brunswick Lumbermen's Association and he occupies a similar capacity in the South-west Miramichi Log Driving Co.

In the practice of the legal profession he has been prominently identified with lumber and pulpwood concerns for many years. It may be stated that Mr. McLellan is also a director of the Brookfield Linen Co., of Belfast, one of the largest linen manufacturing concerns in Ireland and, as such, has made frequent trips to the Ulster capital. Some eleven years ago he organized the Palmer-McLellan Shoe-pack Co., with a capital stock of \$75,000 and became its president. This concern is possibly the largest manufacturer of oil-tanned footwear in Canada.

It is expected the Royal Commission on the export of pulpwood will start holding its sittings in the near future.

May Produce Paper From Western Straw

Sir Frederick Becker, of London, Eng., who is spending several weeks in the Dominion in connection with his extensive pulp interests, is aggressive and is of the firm conviction that there is an opportunity for the production of paper from the straw of the prairie provinces of Western Canada.

Providing the necessary encouragement can be received from railways and other organizations in the matter of transportation, etc., it is likely that a mill to manufacture high-grade paper from straw will be in operation somewhere in Western Canada before the 1924 crop is ready for harvest. The plans of Sir Frederick Becker call for the establishment of the mill at some convenient central point. This has not been chosen, but it is possible that a paper mill may be established first at Winnipeg and perhaps a second mill somewhere in Saskatchewan.

Sir Frederick said that the application of the system of making paper from straw is the real reason for his present visit to Canada and that he is not here to experiment but to apply knowledge that has been worked out in experiment and practised on in Europe. The manufacture of paper from straw is not a new thing but in the past has not always been successful. The new process, recently worked out, makes paper making from straw thoroughly practical and produces a high grade.

How Pulp Industry Grows in Canada

The preliminary report on the pulp and paper industry of Canada in 1922 just published by the Dominion bureau of statistics shows that there were 104 mills in operation during 1922, an increase of 4 mills over the preceding year and the total net value of the production of these mills was given at \$155,785,388. While the value of production is not as high as in 1920, the quantity of pulp and paper actually produced was much greater, the drop in value being caused by the low prices which prevailed in 1922 compared with those current in 1920.

The amount of capital invested in the industry increased from \$379,812,751 in 1921 to \$381,006,324 in 1922.

The number of employees in the industry in 1922 was 25,830 and the total payroll amounted to \$32,918,955, which is somewhat lower than the total for 1921 when the number of employees was 24,611.

The total cut of pulpwood in 1922 was 3,923,940 cords, valued at \$50,735,361, compared with a total of 3,273,131 cords in 1921. Of the total cut in 1922 the Canadian mills consumed 2,912,608 cords in

the manufacture of pulp and paper and 1,011,332 cords were exported in the raw state to the United States.

The total production of wood pulp was 2,150,251 tons of a value of \$84,947,598, and of paper, 1,366,815 tons, of a value of \$106,260,078.

The total quantity of wood pulp exported in 1922 amounted to 818,247 tons, of which 610,314 tons were sent to the United States. Exports of paper were valued at \$74,825,893, of which shipments to the United States amounted to \$65,000,332.

Shantymen's Christian Association Work Grows

The Shantymen's Christian Association, the head office of which is at 15 Toronto St., Toronto, has begun the publication of a monthly magazine called "The Shantyman." The editor of this bright and readable little paper is William Henderson, of Toronto, who is the aggressive and widely known superintendent of the Association. The first issue contains encouraging references to the progress and expansion of the work and the experiences of a number of missionaries in various parts of Canada and the United States in carrying the glad tidings to men in the camps.

W. H. Adamson, treasurer of the Association, recently returned to Toronto from a business trip to Vancouver and while there made use of the opportunity to get acquainted with the work and workers in Victoria, Vancouver, Edmonton and Winnipeg.

The object of the Shantymen's Association is to carry the Gospel to the thousands employed in lumber, mining, construction and other camps and also to engage missionaries to carry on itinerant missionary work especially in places where no other Christian work is being done. The means to be used are such as seem best suited to the needs of each particular field.

The movement is financed by voluntary contributions from friends and supporters of the good-cause, which is undenominational in character and control and has developed rapidly in interest, importance and influence during recent years.

Licensees Will Cut Damaged Timber

It is reported that a thorough survey of the T. and N. O. Railway with a view to effecting economies and enhancing the efficiency with which it serves the north country, has been entered upon by the present Ontario Government. Premier Ferguson has announced a project which, it is claimed in addition to saving the road \$50,000 a year, will give Cochrane an industry employing about 100 men.

The proposal to which the Government is giving serious consideration is the establishment of a creosoting plant at Cochrane for the purpose of treating the ties used by the T. and N. O. Railway. Expert opinion, which the Premier has secured, declares that the life of the railway ties can be doubled by being creosoted and, in view of the present price of ties and the fact that the T. and N. O. uses 200,000 of them annually, the scheme offers an important field for saving by the new administration. It is anticipated that the saving would run into the sum of \$50,000 annually.

It was stated recently by Hon. Mr. Ferguson that, with the extension of the T. and N. O. Railway north, an attempt had been made to follow the Abitibi River, with the result that costly bridge structures had been involved. The only criticism offered regarding the extension of the line was that it was not tapping the northern timber resources as it should. In spite of the heavy carrying charges, the present government is confident that the opportunities of the north are such that the railway can be operated advantageously and efficiently both in the matter of financial return and of service rendered. During the last fiscal year the road returned to Ontario about \$500,000.

Will Creosote Ties of T. & N. O. Road

"We expect the licensees to cut this timber themselves during the season, or, if unable to do this themselves, to lease their areas to other licensees who can," said Hon. C. W. Robinson, of Fredericton, Minister of Lands and Mines, in discussing the problem of removing the billion feet of timber standing in a more or less damaged state in the areas burned by forest fires in New Brunswick this season.

He also stated that the work of surveying and mapping these areas and the compilation of the various quantities of timber affected has been pretty well completed, and should be available shortly. Mr. Robinson also added that the department expected the various licensees to advise them of their individual intentions in regard to the salvaging of this burned timber, which must be removed as speedily as possible in order to preserve the merchantable qualities still retained.

More Interest Taken In Accident Prevention

Lumbermen's Safety Association is Doing Good Work—Some Timely Suggestions Offered with Regard to Men, Management and Methods—Ascending Rates

There is a growing interest in accident prevention work and the majority of operators are keenly interested in seeing that Safety is kept to the forefront. It is pointed out that an accident is either preventable or not preventable, and, if preventable, the question is asked,—“Why not prevent it?” If not preventable, the Workmen's Compensation Act recompenses the worker in some degree for his injury. The employers can do much along sane, practical lines by educating themselves and those who are in their service in accident avoiding activities and thus cut down compensation by reducing the number and the seriousness of accidents.

At the annual meeting of the Lumbermen's Safety Association which was held some time ago, the report of Frank Hawkins, secretary-treasurer, was presented and considerable interest taken in the proceedings. W. E. Bigwood is the president of the Association and R. F. Milne inspector. The secretary-treasurer gave some interesting statistics covering the past year and also a provisional statement of the gross income and expenditure in Class 1.

With reference to the rates of assessment for 1922 adjusted and 1923, provisional the chairman of the Board advises the following changes:

	Adjusted 1922.	Provisional 1923.
Creosoting of Timber	\$1.50	\$2.00
Operations which would otherwise be in more than one group in this class and in which the usual total annual pay roll does not exceed \$10,000	3.50	4.00

The number of accident memos covering 1922 operations was 2920, whereas in 1921 there were 2760. There were 43 deaths occurred in saw and planing mills and 147 in logging operations, 36 being due to falling trees and 37 to drowning.

This record calls for the earnest personal interest of every employer and every employee. Every accident no matter how trivial is just so much waste—economic so far as dollars and cents are concerned—humanitarian and physical so far as the worker is concerned—injury causes inefficiency and increases the cost of living which in the long run adversely affects the worker.

Let everybody work with the one idea of cutting out this terrible and unnecessary drain on industry: let us cut out the suffering and maiming.

Among the suggestions made by members the following may be noted

Medical men should report more fully regarding the exact nature and extent of the accident and progress towards recovery. There should be some means of determining when the injured man should return to work and compensation cease.

With reference to employers being covered by the Act—it was felt that the minimum wage of \$1200 per annum was not unreasonable.

The reporting in January of each year of estimated pay roll was considered to be reasonable, any increase or decrease in operations could be readily adjusted with the Board.

It was pointed out by another member that where an employee whose wages are so much a month and board, if hurt in the woods and taken into the camp compensation being based on wages plus board, notwithstanding the fact that the employer is providing board meanwhile. On recovery the man puts his cheque in his pocket without paying for his board and leaves for other parts. The employer is put to additional expense and inconveniences in replacing the workman.

There is apparently a strong feeling among members that the worker should contribute something towards the accident fund of the Workmen's Compensation Board, although under the Act such a proceeding is specifically prohibited.

A suggestion made at the monthly meeting of the Joint Safety Committee in Toronto, that the accident memos issued by the Board would be increased in value if the number of days work lost in each case were shown thereon, was concurred in.

The Secretary was instructed to communicate with the Chairman of the Board urging the publication of a list showing the total assessments and the total accident costs in each year in Class 1 industry.

Mr. R. B. Morley, General Manager of the Industrial Accident Prevention Associations, Incorporated, urged close co-operation between Class 1 and Class 4 industries, pleading that in cases where a saw mill and also a planing factory was operated that the inspector could report upon both industries separately and thus reduce the cost of sending in two inspectors instead of only one. The Secretary was instructed to co-operate so far as possible with Mr. Morley.

The directors of the Lumbermen's Safety Association of Ontario are: Messrs. W. E. Bigwood, Byng Inlet, (president); Dan. McLachlin, Arnprior, (vice-president); Sir Henry K. Egan, (Hawkesbury Lumber Co.) Ottawa; H. I. Thomas, (J. R. Booth), Ottawa; George Gordon, (George Gordon & Co.) Cache Bay; John S. Gillies, (Gillies Bros.) Braeside, and D. R. Thomas, (Gatineau Co.) Ottawa, directors.

British Visitor Criticizes Sawmill Waste

At a recent discussion of empire trade in forest products by the British Empire Forestry Conference at Ottawa, Sir James Calder, C.B.E., one of the British delegates, said he was impressed with the fact that the manufacturing methods are not so economical in Canada as, for instance, in Sweden.

A feature of Swedish saw mill practice was the thin saws used, resulting in the minimum waste as sawdust.

It was a curious fact, said Sir James, that Sweden supplies boxes to the West Indies for shipment of bananas. These boxes are manufactured from slabs which in eastern Canada go into the burner.

In view of Canada's close trade connections with the West Indies, it seemed to him that it should be possible for this country to secure that trade and utilize material now destroyed.

Matapedia Lumber Co. Will Rebuild Mill

The sawmill of the Matapedia Lumber Co., Limited, in the valley of the Matapedia, about 35 miles west of Campbellton, N. B., was recently destroyed by fire but the blaze did not touch any of the lumber or the other buildings. The mill was covered by insurance but at the time it burned the company had over 3½ million feet of lumber to saw. They will rebuild but do not expect to have the plant finished soon enough to complete the sawing this fall, so that it will somewhat reduce next year's operations in the bush.

Speaking of lumber conditions in general, Mr. D. Champoux, who is first president of the company, says that new operations in and around Restigouche, have not yet been definitely decided upon but there is no doubt that a fair quantity of logs will be cut during the coming winter, especially in the burned districts. The labor situation is fairly favorable although a large number of men in that territory have gone West to assist the harvest operations. The majority, however, are expected back after a couple of months and wages for lumberjacks will, probably, be somewhat higher than they were a year ago.

With respect to camp supplies, it is generally believed that the figures on these will be a little higher than last season.

Licensees Will Cut Damaged Standing Timber

“We expect the licensees to cut this timber themselves during the season, or, if unable to do this themselves, to lease their areas to other licensees who can,” said Hon. C. W. Robinson, of Fredericton, Minister of Lands and Mines, in discussing the problem of removing the billion feet of timber standing in a more or less damaged state in the areas burned by forest fires in New Brunswick this season.

LUMBER TRADE CONDITIONS

Montreal Market Shows Some Decline in Volume

Business in Montreal has declined and with this prices of spruce and hardwoods have reacted somewhat. The position, however, is healthy. Some wholesalers are of the opinion that there will be a further loss in values while others hold that the market will not show any additional decreases worth speaking about, basing their view on the ground that supplies, particularly of spruce, are not beyond what may be termed the reasonable requirements for the remainder of the year. Manufacturers, it is asserted, are still holding out for their prices.

The situation is thus summarized by one of the leading wholesalers in Montreal:—"As far as I can see, the outlook is for a steady business during the balance of the year. The buying has been heavy during the past three months and there is now a little lull while this lumber is going into consumption. All the old dry stock has been disposed of, and with the new cut which has been sold, the supply of lumber will not be more than sufficient to take care of the demand which may be expected in view of the building position and general trade conditions. On the whole I look for prices to be about maintained, or a little lower, although, of course there may be cases in which for special seasons values may be cut. There is no reason why we should sacrifice lumber."

According to advices from across the border, building is increasing and this should be a favorable factor for Canadian lumber.

There is a let-up in the call for hardwoods, with a decline in the price of birch.

The employment agencies are still advertising for men for the lumber industry. Apparently there is employment for every man who is willing to work.

The Montreal retail trade is fairly active, due to the extensive building programme. The permit figures for July showed a falling off, being \$1,619,370 as against \$2,291,190 in the corresponding month of 1922. The total for the seven months to date makes a good showing, with \$17,089,487 as compared with \$11,433,694 in 1922.

There are complaints of a shortage of cars, nothing serious as yet, this being, no doubt, to the sending of cars to the west in anticipation of the harvest.

The lath market has picked up. After very extensive buying, there was a decided dullness, which has been followed by a large number of inquiries and more orders with the result that the price has hardened.

The export section is almost dead. There is an abundance of liner space available but little lumber to fill it. The mills in the Three Rivers district, which as a rule cut for the U.K. market, will not make a deal this year for overseas export. They are converting their trees into pulpwood instead.

Lumber Trade at St. John Slackens Somewhat

The lumber export trade at St. John at the present time is said to be quite profitable although the demand in the American market has slackened somewhat. This is also true of the English market. This summer the eyes of the lumber merchants have been turned towards the latter and there was some indication that the product, originally intended for the American market, would find its way to the English buyers, because of the decline for lumber across the border. Stocks of spruce are reported quite low in both markets, but in spite of this fact buyers seem cautious. In addition local shippers are a bit careful and are contracting only for amounts they expect to get clear of without long delay.

One of the factors affecting provincial lumber in the United States is said to be due to competition from the West, which sends large consignments via the Panama Canal. In the English market the whitewood manufacturers are making keen competition for provincial merchants.

The import of spruce deals into Manchester for the month of July was 830 standards, of Baltic red deals and whitewood, 7,500 standards; of Galatz, etc., whitewood, 3,160 standards. In 1921 there were no imports into Manchester from the Baltic or Galatz and a total of 4,210 standards from both in 1922.

The showing at Liverpool, Birkenhead and Garston is 1,320 standards of spruce compared with 1,750 from the Baltic and 460 from Galatz. On the whole, it is disclosed by these figures that, where formerly spruce and whitewood were about equal, the latter is now away out in front. Statistics also reveal that at the end of June the stocks of Baltic deals in Manchester were 9,960 standards;

of Galatz 4,280 and of spruce deals only 1,850. The exchange and the high cost of production are responsible for this situation. At the present time the cost of producing spruce lumber in New Brunswick is so high that it is impossible to compete successfully with European whitewood. Some buyers are demanding spruce and as a result there is a fair market for it.

With regard to the American market the competition from the Pacific coast is being felt by maritime shippers. While prices are still firm the demand is flat. The uncertain industrial situation is largely responsible and lumber buyers are waiting to see if there is any strength behind forecasted activities before stocking up.

The lath situation is at present very dull. However, if industrial activity continues, this commodity should pick up as stocks are said to be low. The fact that there are no large quantities being placed on the market, keeps the price firm.

A late report shows that at the end of last month 2,150 standards had arrived at the Mersey (including the Manchester canal). The deliveries from stocks amounted to 3,000 standards, resulting in stocks being reduced to 6,450 standards, compared with 7,630 at the end of June, 1922. The stock in Manchester was extremely low.

With reference to reports from Boston for dimension spruce they reveal decided differences of opinion among merchants. Some admit the probability of an improvement in the demand for provincial lumber after the vacation season, but do not believe that it will be of sufficient importance to render an advance practicable. They think that, if the present range of price is maintained, it will be quite as much as producers need expect; this being based on a shrinkage in the number of building permits, the large receipts of lumber by rail after the embargoes were lifted and the quantities of Pacific Coast fir bought by yardmen at a low price since then.

Others, however, take a more cheerful view. They admit what is said about the large additions to the retailers stock both by rail and water, but contend that, if western fir continues to be sold at the prices recently accepted for it, the producers or middlemen will be in bankruptcy before very long. They also point out that although much has been taken into the yards, much also has been taken out. It is declared that there will be much building and this should increase the demand for provincial lumber of all sizes. They predict an early revival in demand. The demand for laths is dead and the price has fallen off from \$6.50 and \$7.00 to \$6.00. Although the retail figure is only \$6.25 there is said to be little or no demand.

With regard to shingles the call is only fair although the prices remain firm, cedar extras still selling wholesale at \$6.25 and cedar clears for \$5.25.

Quebec Exports Suffer From Dockers' Strike

There was a lull in the shipment of timber and sawn lumber from the port of Quebec during the month of August, due to the strike of dock labor in the British ports and as a consequence congestion of these ports with barques unable to discharge their cargoes. Owing to these conditions Quebec lumber firms, who have not completed their orders, have been requested by the British customers to delay shipments until these strike conditions terminate. The present labor difficulties at British ports are not countenanced by Labor Union leaders who have seemingly lost all control of the workers, but due to Russian propaganda with which the Labor Unions have been fed upon for some length of time to poison the minds of the workers to the great detriment of British shipping interests. These unfortunate conditions have also had the effect of arresting the timber and sawn lumber importers in the British Isles from buying, with the result that the lumber trade in Great Britain, which appeared so promising in the beginning of the year, has been given a severe set-back, and even if the strikes among the labor laborers are soon settled, it will take months to recover the ground lost.

Toward the closing days of August the strike of the dock workers in London showed signs of an early collapse, but for more than a month the whole of the overseas trade of that great port was held up and caused congestion. The accumulation of shipping in the Thames will cause delay at the docks for some months after the workers resume and the losses to the merchants will be considerable. From last accounts received it was difficult to fortell when the revolt of the dock laborers against their leaders would terminate.

In addition to about sixty ships to be discharged in the Surrey commercial docks, there were a considerable number lying in the

“On Time” Delivery

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

Lumber Trade Conditions

(Continued from page 53)

river awaiting berths. These include vessels with parcels from the United States and Canada, as well as from Sweden, Finland and the White Sea, which accounts for the slump orders from the United Kingdom to the Canadian shippers and the request that no further shipments of wood already ordered be made until the strikes are settled.

The British agents of Quebec lumber exporting houses dealing with the situation in their reports, point out that, at the end of July, there were over fifty vessels, more or less, timber-laden lying in the Surrey commercial docks awaiting discharge, and this number was being daily added to in the two first weeks of August. At the same time there was a regular fleet of lumber-laden vessels lying in the Thames. The effects of the strikes will likely continue for months following an arrangement with the workers and the importers will lose money. In the meantime in other places where the strikes do not exist, the consumption of wood continues good and the many schemes for housebuilding have created an excellent demand for sawn lumber.

Although the spirit of enterprise has been somewhat dampened by the labor difficulties and a feeling of insecurity caused, the importers realized that the time must come when further goods will be needed, though they are leaving buying alone for the present and, with this viewpoint in mind, a spirit of optimism still prevails.

Though not holding out any definite encouragement, the British agents of the Canadian firms are of the opinion that, after the disappearance of the present labor difficulties, a reaction will follow which is likely to be shared in by the Canadian exporters and orders will enliven a brisk fall trade. The correspondents report that, for some months past, it has been extremely difficult to weigh up the situation, taking into consideration politics and the abnormal deflation in the rates of continental exchange which has sorely tried the patience of the British business public as well as the Government and in the end forced the latter to speak plainly to France.

It is realized in England that the great war ended in 1918 with the defeat of the Germans but, ever since there has been another war, an economic war, which like a cancer has been eating into the vitals of trade and the commerce of the world, a war of destruction which England can no longer condone. It is the general belief that the firm tone of the British note will hasten a settlement notwithstanding the evident resentment of France.

Mr. Austin Wilson, of the London and North Eastern Railway, who was recently appointed by the British Government to proceed to New Zealand and remain in that country until 1926 in the interest of Empire trade, arrived in Quebec lately en route to New Zealand, and in the course of an interview on the European political situation and trade conditions generally in England, said: "The British public were behind the Government in the last note sent to France and Belgium over the Ruhr situation and looked for a means to effect an early settlement. England has stood the test of the economic war as long as it has been possible to do so but, now the time had arrived to put an end to the situation which, if continued much longer, would lead to the economic destruction of the world. England has no sympathy or pity for the Germans and maintains the greatest friendship for France. Nevertheless the future of the civilized world depends upon a settlement of the Ruhr dispute and France must listen to reason in this respect or England will be obliged to deal with the question as she thinks best in the interest of peace and commerce of the European world. There is considerable buying power left in England and if the position was more hopeful business would greatly improve.

"The underlying causes of general trade depression are the state of Europe and the continued depreciation of exchange and England has concluded to take a more active and definite stand in an endeavor, by her influence and prestige, to awaken other nations to a realization of the deadly policy of financial drift. In the meantime it must be admitted that the wealth of our own country has been sadly depleted and our capacity to help other nations is limited. There is no doubt but that the continent of Europe will have to pass through a critical period before much progress in the upward trend can be made, but should the settlement of the Ruhr question come about soon, as I expect it shall, it will brighten the hopes of all nations and be the dawn of an era of reaction in the trade and peace of the world and will be the beginning of the end of the curse of Bolshevism.

"In the meantime," said Mr. Wilson, "There prevails a spirit of optimism in England, the British public have implicit faith in their government and, if it were not for the large army of unemployment in the country which is the cause of much concern, England would not in the least worry. Canada and the United States have been up to the present immune from European chaos, but should the situation continue much longer without a sane settlement, Europe will not have the money to buy Canadian wheat and then you will

begin to realize the need of cleaning the political dark clouds which have been hovering over Europe since the close of the war, and wish for a settlement of the Franco-Belgium-German question, which the British Government is now endeavoring to have adjusted even at the expense of a rupture of the entente cordiale."

Ottawa Reports Lumber Business Gaining Some

A slight improvement was noted in the Ottawa lumber market during the closing period of August when prices remained firm and business picked up a little. The improvement in the demand came principally from the United States, and was for the better grades and the mill run stocks. The local demand while fairly quiet remained steady.

Inquiries showed an increase and this was taken as meaning that better business was probably ahead for the fall months. Lumbermen expect that trade in general will show an increase during the next three or four months. Lath and shingles remained quiet.

Labor with the sawmills, woodworking plants, and factories, remained plentiful, but for the woods camps it was very scarce and an advance in wages amounting to \$10 per month, over last year was noted. The wages being paid at the end of August ranged from \$35 to \$45, and it was forecasted that if the shortage of help continued that wages might go as high as \$50 or \$55 per month.

The scarcity of men available to go to the bush was attributed to the large number who went from the east to help garner the western harvest. Locally farmers and their sons had their own crops to attend to and save and were not considering going to the shanties. After the harvest has been safely stored away, it is expected, that there will be a fair amount of woods labor available.

Transportation both by rail and water remained satisfactory. Several of the planing mills were kept fairly busy dressing lumber in transit. Conditions with the woodworking plants and factories remained unchanged.

Ontario Trade Quiet and Competition Keener

There is not much change in the lumber situation in Ontario except that trade has been quiet during the past two weeks and buying has fallen off considerably. There has been an easing up in prices in some lines of hemlock and Southern pine and Wisconsin and Michigan hemlock are proving strong competitors to the Ontario products quotations on which have been cut by some firms from \$2 to \$3. White pine and spruce are holding their own and are still in fair demand.

The great question that faces the lumber companies at the present time is in the matter of securing men for logging operations. A large number of hands have left for the Prairie provinces and some mills have been inconvenienced in getting help to take the place of the absentees.

So far as logging operations are concerned, wages being offered at the present time run from \$40 to \$45 a month which is \$5 more than last year, and even at this figure there are not enough lumberjacks forthcoming.

The suspension of the Home Bank has been a somewhat disturbing factor on the industry as a few lumber and woodworking firms had their accounts with the financial institution. This collapse naturally causes a tightening up on the part of other banks and shortens the credit extended to lumbermen in their legitimate operations. Business has also fallen off considerable on the other side and is quiet in consuming centres where quantities of Canadian white pine are regularly disposed of.

Receipts of new stock from the lumber mills have been rather light, so far as dry material is concerned, and is later in coming on the market than usual. While stocks in retail rural yards have run low, there is no disposition to replenish at the present juncture until it is definitely known how the crops will turn out and the prices that will prevail for cereals, live stock and dairy products during the fall months.

Generally, the expectations are that there will be a gradual increase in buying next month as both city and country yards prepare for fall trade. Continuation of building on a fairly large scale in most of the cities is one gratifying sign of fall turnover in forest products and that lumber will continue to be in moderate demand.

In hardwoods, shipments have been going forward in satisfactory volume but business locally is dull. Practically all the sales made are to consumers across the line. One leading authority states that the market during the fall will be receptive, prices reasonable and the general movement, in which there has been no appreciable change for some time, satisfactory. The trade is just now coming through its midsummer quietness and while it is difficult to make forecasts, it is believed that the expected revival of industrial activity, the demand will be greater than it has been for some weeks.

THE RING

We Can't say

"Yes—we have no business today."

We have business today and lots of it. In fact we've had a little more in the past few months than we were prepared for.

You pushed it onto us good and hard, and with a rush. We were compelled to work our staff over time—and all time to take care of it.

We don't mind telling a little secret right here. Our business last year was pretty good but this year our sales are running at records, for instance this July they were nearly sixty per cent. more than July, 1922.

But after all you are only putting your orders where you can get a share of the profits, for the more volume we get—the lower we are able to sell and will sell, and thus indirectly return dividends to you.

You who are not now dealing with us, get in with this big drive and let's travel together—you'll like our Company.

Call and see us when visiting the Exhibition, also see our Exhibit in the Pure Food Building

R. HOE & CO., NEW YORK

AMERICA'S OLDEST SAW MANUFACTURERS

95TH YEAR

No Special Development in British Demand

Late reports from Liverpool, Eng., are to the effect that there are no special developments in trading during the last month. With perhaps the exception of sawn pitch pine, imports were confined to requirements and deliveries more or less kept pace. Stocks generally are sufficient without being excessive. It must be borne in mind that consumption, especially in Manchester, was seriously interfered with by the dock strike. As work is now being resumed, it is hoped that the leeway will be made up although the holiday season will have a retarding effect, say Farnworth & Jardine, in a recent letter to the trade.

Speaking of Canadian woods, it may be said that the demand for yellow (white) pine timber ruled quiet and stocks are slightly increased. In first-class waney pine there was an import of 25,000 cubic feet against contracts. Deliveries were rather disappointing with the result that stocks have increased, now standing at 123,000 cubic feet, which is mostly stored in Manchester. In the lower grade of red pine there is very little call, stocks appearing sufficient, and in square red pine there is practically no demand at all.

So far as Canadian oak is concerned, a small shipment came to Liverpool recently. Demand ruled quiet with ample stock for the time being. There was also a small consignment of round elm logs which arrived lately, about 4,000 feet of the import which reached Manchester during June, has been brought to Liverpool and is now in stock there. Inquiries are limited to large fresh wood.

In pine deals the import was considerable with fair deliveries. Stocks are about on a par with those held at the same period last year.

In the spruce market prices ruled firm. The import was moderate and met with a fair request. There was an import to the Mersey (which includes the Manchester Canal) of 5,830 standards of New Brunswick and Nova Scotia spruce and pine deals. The deliveries, especially from Manchester, were much interfered with owing to the dock strike with the result that the total consumption came to only 2,120 standards. Stocks amount to 10,160 standards, being slightly more than those held at the end of July last year. The market showed little or no change and values remained firm throughout. Ocean tonnage rates were reported to be slightly firmer.

So far as pine deals are concerned, stocks are almost exhausted. In birch logs Liverpool received an import of 6,000 cubic feet. The demand ruled quiet but stocks are quite moderate, being almost exhausted in Manchester. About 41,000 cubic feet in birch planks came to hand at Liverpool. Deliveries were fair and stocks are high—a little over—200,000 cubic feet which is mostly held on the Mersey Canal. The Liverpool market showed a slight improvement.

New Bookings Few But Outlook Firm

Although new bookings are few, the export lumber market remains very firm in the face of weakness in foreign markets, says recent advices from British Columbia. Sawmills in the Province have contracts on hand calling for the cutting of 44,000,000 feet by the middle of October. The most interesting feature developed recently has been an order from Glasgow for a shipment of re-saw material of about the same quality and dimensions as Japanese square. Orders also have been placed for 5,100,000 feet of ties for China and 2,000,000 feet of China standard specification lumber, mostly for delivery in August and September.

Both lumber and shingle manufacturers are looking for good country business in Midcontinent and Western States and Provinces this fall. Their optimism is based on the fact that the late spring prevented the farmer doing any building before he went into the field to get his seed in the ground. There is also the fact that the major portion of the building done in the past two years in the East has been in the cities and industrial centres. They contend that it is now the farmers' turn to build and repair houses and outbuildings.

Shingle interests are practically hopeful that the farmers will do some construction work this fall, as the shingle trade is very dull.

In the lumber industry the chief change is the falling off in the demand from the United States, which is felt more particularly by Eastern mills. On the other hand the mills on the western coast continue active, the slackening demand from the south being offset by an increasing demand from Japan, which is buying heavily. Shipments to prairie points from British Columbia are increasing, but in view of the limited demand from farmers during the past few years, this is not surprising.

Widening Membership of Hardwood Association

The measure brought forward prior to our late Twenty-sixth Annual Convention proposing (in response to a widespread and long-continued demand for same) an amendment to our Constitution and By-Laws whereby factory consumers of hardwood lumber can be admitted to Associate Membership in this organization was unani-

mously adopted by the Convention. A copy of the Constitution and By-Laws embodying the provisions of the proposed amendment was placed in the hands of every member of this Association sufficiently in advance of the convening of our late annual meeting. As a reminder we quote these provisions herewith:

"Associate Membership shall consist of consumers of hardwood lumber. Any individual, firm or corporation in good standing engaged in the fabrication of hardwood lumber into manufactured products, is eligible to become an Associate Member of this Association. Applications for Associate Membership shall follow the same course of procedure as those pertaining to Active Members, viz.: Shall be made in writing to the Secretary-Treasurer accompanied by check (\$50) covering one year's membership dues. There shall be no initiation fee for Associate Membership."

In this connection the following recommendation was also adopted as an addition to the regulations governing our Inspection Bureau:

"The Relationship of Associate Members shall in nowise alter the existing rules and regulations of the Inspection Department applying to and between Active Members of the Association. Associate Members may receive official inspection service on the payment of the same fees and expense as Active Members."

The Associate Membership movement has been inaugurated under very favorable auspices. A number of representative hardwood consumers have already entered their memberships and negotiations are now under way as result of which a large additional intake of Associate Members is likely to ensue.

Ontario Government Stops Timber Sales

The recent announcement of the Ontario government, through Premier Ferguson, to the effect that timber sales of Crown lands would be stopped, is in direct contrast to the former government policy of a rather lavish utilization of lumber and pulpwood resources. Hon. Mr. Ferguson stated that his government had decided that no further sales would be made except those for which special reasons, existed until a thorough survey of the wooded wealth of Ontario has been completed.

This step toward a more intelligent and comprehensive knowledge and conservation of the forest resources of the province is one that will be commended by all fair-minded citizens. In view of ever-diminishing supplies and the destruction by fire, insect, fungi, waste, etc., it seems a wise policy not to exploit further forest areas without having a more definite idea of the extent, quality, growth, reproduction, etc. These facts are not known although guesses and estimates have been made time and again but, in all these appraisals of the present and prospective timber production of Ontario there is a wide divergence. The only method of ascertaining accurately all that should be known is by means of a thorough and progressive survey which should be carried out as expeditiously as possible.

Such a survey is a task which may occupy some years to accomplish, although detailed cruising has already been done in the Mississauga, Timagami and Algonquin Park reserves.

The Government intends to take careful stock of its forestry resources and to take steps to remedy details in which they are deficient. The scarcity of white pine, due to a blight which has killed great areas of the trees, is one of the serious problems of the present. The Department of Lands and Forests intends to wage intensive warfare against such plagues in order that the forest wealth may not be impaired.

Until the Ferguson administration has found out with fair accuracy of detail the heritage which still remains to the public, sales of timber are to be discontinued. Only exceptional cases, such as where an industry already established requires additional timber for its existence, will this rule be departed from.

National Secretary on European Tour

Wilson Compton, of Washington, Secretary-Manager of the National Lumber Manufacturers Association is now in Europe and will represent the American Lumber Industry at the Swedish Tri-centennial Exposition at Gothenberg. The Bureau of Foreign and Domestic Commerce of the Department of Commerce, has requested A. X. Oxholm, Chief of the Lumber Division, who is already in Europe, to accompany Mr. Compton on his special tour of the Swedish saw mills and forests. Mr. Compton's special purpose in the Swedish trip is to get a first hand impression of waste prevention and raw material utilization methods of Scandinavian mills. The United States commercial attaches in different European cities will assist Mr. Compton to study the methods used in Europe for enforcing and guaranteeing lumber quality and dimension standards.

Linn Logging Tractor in operation by Austin & Nicholson Limited, in their limits near Esher, Ont. Above illustration shows Linn Logging Tractor with train of eight sleds of 16 ft. green Jack Pine Logs

LINN LOGGING TRACTOR

Austin & Nicholson Limited commenced operation with their Linn Logging Tractor about January 20th. Their haul was about $6\frac{1}{2}$ miles long and their daily average was about 112,000 feet. Mr. Nicholson claimed that their daily total was limited through delays in loading and forwarding out of sleds to tractor. He figured that during their first month's operation, they had saved approximately \$85.00 per day over their previous year cost of haulage with horses. They went through their entire haul without any mechanical adjustment whatever—and previous to entering their service—their operator had never seen a Linn Logging Tractor.

We have claimed much for the Linn Logging Tractor—but its performance has, in many operations, far exceeded our claims.

Pulpwood Commission Has Wide Powers

Joseph Picard, manufacturer, of Quebec, A. B. Kerr, barrister, of Toronto, Robert W. McLellan, barrister, of Fredericton, N.B., Joseph G. Sutherland, lumberman, of Blyth River, N.S., and William Anstie, contractor, of Vancouver, form the Royal Commission which has been appointed by the federal government to enquire into the forest resources of Canada with a view to determining the need or otherwise of an embargo on the question of the exportation of pulpwood from freehold lands.

Mr. Picard will be the chairman of the Commission and it is expected that the sittings will occupy a considerable time. E. H. Finlayson, of Ottawa, who is Acting Director of Forestry for the Dominion Government, has been attached to the Commission as secretary.

Wide scope is given the new body and sittings will be held in various parts of the country. The fullest investigation will be made into the pulpwood resources of Canada and particular regard will be paid to the following points:—

The extent in each province of wood of various kinds available for pulp.

The quantity of wood so available on lands owned by the Provincial Government and subject under Provincial laws and regulations to restrictions requiring the partial or total manufacture of such wood in Canada.

The quantity of wood so available on lands owned by the Dominion Government and subject under federal laws and regulations to restrictions requiring partial or total manufacture in Canada.

The quantity of such wood on other lands and the conditions under which such lands are held, whether by ownership or lease, whether by corporations or individuals, whether by citizens of Canada or other countries.

The quantity of pulpwood produced in each province of Canada during the past ten years, showing the portion used in Canada and the portion exported.

The question of the prohibition or restriction of the export of pulpwood from Canada.

Any other matter touching upon the production, manufacture or sale of pulpwood essential to comprehensive consideration of the question of prohibition or restriction of the export of pulpwood from Canada.

The making of recommendations that may be deemed expedient for the conservation of pulpwood for present or future use.

It is announced that Mr. Picard as chairman of the Commission will receive \$35.00 a day for every day during which the Board is engaged in the work while the other commissioners get \$25.00 a day. An expense allowance of \$15.00 a day is permitted members of the Commission in addition to actual expense of transportation.

The personnel of the Committee is looked upon as a representative one and among the outstanding figures is R. W. McLellan, of Fredericton, who for years has been secretary of the New Brunswick Lumbermen's Association and closely connected with pulpwood activities.

New Paper Mill at Bathurst Starts

The new 60-ton newsprint mill which has been erected at Bathurst, N. B., by the Bathurst Co., started operations on August 17th. Angus McLean, who is the president and general-manager of the company, says he expects the plant will be producing at full capacity within a very few days. This marks a new era in the New Brunswick industry for the newsprint unit of the Bathurst Co. establishes the first paper mill ever operated in the province. The Bathurst Co. has for several years been engaged in the lumber and pulp business and has gradually expended until it has built up Bathurst, and now along with Frasers Limited, of Edmundston, the former town possesses some of the largest industries in the province.

When asked about the pulpwood embargo on freehold pulpwood, Mr. McLean, who is president of the Canadian Lumbermen's Association, said that he was convinced that the embargo would work ultimate harm to Canada although his own firm would benefit temporarily, at least, from it. He thought a careful investigation of the

entire facts surrounding the question would show the wisdom of such a move.

It is understood that the Royal Commission which was recently appointed at Ottawa to investigate the pulpwood resources of the Dominion, will not begin its sittings for, at least, two weeks yet, when evidence will be taken on the advisability of prohibiting the export of wood from private lands. The Commission will visit all the big centres and will go thoroughly into the whole question.

Two Plants Wiped Out at Penetang

The International Fibreboard Co., whose plant is at Penetanguishene, Ont., suffered a heavy loss on August 19, when their plant was totally destroyed by fire. The company turned out wood fibre, solid wallboard and had planned to double the output and to employ a larger number of men. The blaze broke out in the afternoon and when discovered, the pulp piles were a smoking mass, and in fighting the conflagration the firemen were handicapped by intense heat and low water pressure. In the outer walls of the building is a fan to carry off the dust from the factory. The firemen think that this fan in action caused the flames to spread so rapidly throughout the building. A rush was made to shut it off but too late. The industry has been in existence for some years. Ernest Rossiter is the president, John I. Rankin, vice-president and secretary, and H. J. Wiser, treasurer and general-manager.

The box shock factory of the Firstbrook Bros., Limited, was also destroyed. It had not been occupied for a couple of years but it is understood that it was the intention of the firm to put it in operation in the near future. A dismantled sawmill belonging to Firstbrook Bros., was also wiped out. The loss of the firm on the box shock building, the International Fibreboard premises and the sawmill, amounts to \$125,000, with an insurance of \$110,000.

Great Lakes Project at Fort William

The Great Lakes Pulp & Paper Co. at the head of which is Lewis L. Alstead, of Appleton, Wis., will erect a \$3,000,000 plant at Fort William, Ont., and details of the arrangements which are now being entered into with the Corporation of that city, have been announced. Under the agreement, which must be submitted to the ratepayers for ratification, fixed assessments for a term of years and a provision for a piece of Kaministiquia River frontage property are to be provided by the city of Fort William and the township of Neebing.

After the execution of the agreement the company binds itself to immediately proceed with the erection of a plant and equipment to cost not less than \$3,000,000, one unit of which the pulp mill will entail an outlay of \$800,000 and will be completed within one year, and a newsprint paper mill, to cost not less than \$2,200,000, will be finished within two years. The latter will turn out 100 tons daily. The company will guarantee to employ not less than 600 men for 250 working days in each year.

The assessment on the industry for the purpose of general taxation on the portion in Fort William shall be fixed at \$50,000 for twenty years and the township of Neebing agrees to fix an assessment for a similar period on the portion in that municipality.

The city agrees that power shall be available to the company on the terms of the agreement with the Hydro Commission, and that the company shall have the right to benefit by any lowering of price below the eighteen dollars per horse power agreed to if similar power under similar conditions is supplied at a lower cost to other consumers. The city will provide its utilities to the company, water, light, phone and street railway service, at the usual price charged for these services. Fire protection is to be afforded.

Eastern Dealers Change Views on Embargo

The pulpwood situation in the city and district of Quebec has undergone no change since the last account reported in the "Canada Lumberman," except that there is no dearth of railway cars for ship-

H. F. Calhoun, of Bienville, Que., is contemplating the erection of a sawmill at Hadlow Cove, Levis County, Que., to cost \$25,000.

The name of the Oakville Wirebound Box & Basket Co., Limited, has been changed to the Oakville Basket Co., Limited, Oakville, Ont.

It is understood that Edwards Lumber & Pulp Limited, Pembroke, Ont., have decided not to proceed at present with the scheme for constructing a pulp and paper mill.

Henri Briere, 97 St. James St., Montreal, intends erecting a sawmill at Duhamel, in Papineau County. The site will be at Chute au Pin Rouge on the Nation River.

Tenders will be called shortly for the new forestry school on Ste. Foye Road, Quebec, Que. The building will be four storeys high, 54 x 180 feet and brick and stone construction.

Barrett Bros., 260 Catharine St., Ottawa, whose lumber sheds and storage building were recently destroyed by fire, will shortly start rebuilding. The structures will be 20 x 65 ft. and 20 x 99 ft.

The Howard Smith Paper Mills have started excavating for an extension to their plant at Cornwall, Ont. The addition will cost about \$225,000, the general contractor being P. Dore, of Valleyfield, Que.

J. Belanger, of St. Mathieu, Que., is erecting a sawmill and factory at St. Fabien, Rimouski County. The mill will be 100 x 60 feet, with concrete foundation, frame construction and corrugated iron roofing.

Work is proceeding satisfactorily on the new planing and box factory of the Dick-Carew Lumber Co., on Murray St., Peterboro, Ont. The building is one-storey, 116 x 50 feet, of mill and corrugated iron construction.

The Spratt sawmill at Port Alberni, B.C., recently commenced operations. The output which is about 18,000 feet a day, is being used entirely for further construction work which will eventually bring the mill up to a capacity of 125,000 feet in one shift.

A special meeting of the Board of Directors of the Ontario Retail Lumber Dealers' Association has been called for Thursday September 6th when several important matters will be discussed. The sessions will be held in the Board of Trade Rooms, Toronto.

H. Brooks, of the Black Rock Lumber Co., Buffalo, N.Y., was in Toronto recently. He intends leaving in a few days for the Old Country where he will spend some weeks visiting his parents. Mr. Brooks' many friends wish him a very pleasant trip.

The annual meeting of the Spanish River Pulp & Paper Mills, Limited, will be held in Toronto on Friday September 28. It is understood that the report which will be sent out to shareholders immediately the audit is complete, will show greatly increased earnings.

The Belgo Paper Company at Shawinigan Falls, Que., is making arrangements to place another paper machine in operation. The work on the general extension of the plant is now more than 60 per cent. complete. The new paper machine will not be started until the beginning of December.

Damage estimated as high as \$200,000 was done recently by a fire which originated in the planing mill of Wm. Sullivan Limited, Nelson, N.B. Fanned by a high wind, the flames jumped the road and swept away several buildings and destroyed several million feet of dressed lumber.

George Leavett, of Vancouver, who was recently appointed British Columbia lumber inspector for Ontario and the East, has taken up his headquarters at 94 Gerrard St. East, Toronto. He has been very busy since coming East a few weeks ago in connection with inspection work.

The Stuart Lake Shingle Mills, at Squamish, B.C., were recently destroyed by fire with the exception of the boiler house. The blaze started from an overheated bearing and quickly spread to the dry kilns where, fortunately, only about half a million shingles were stored. The damage is estimated at \$25,000 and was partly covered by insurance.

Fire recently visited the planing mill of Cockerline & Floody, at Blyth, Ont., and wiped out the plant. The loss was about \$10,000 and the insurance covered only a small portion of the amount. The destruction of the mill was a bad loss to the town as a number of

hands were employed. The firm have not yet decided whether or not they will rebuild.

The members of the Empire Forestry Conference recently paid a visit to the extensive plant of the Abitibi Power & Paper Co., at Iroquois Falls. The delegates were received by R. A. McInnis, manager of the mill, and went through all departments of the extensive industry. The visitors were also taken for a trip up the company's railway where they inspected logging operations, loading new spurs, fire protection service, etc.

Bernard E. Rodden died recently at his home in Toronto, aged 76. He was born in Renfrew County but lived for many years in Mattawa, Ont. He was a man of remarkable energy and popular with a wide circle of friends. Mr. Rodden was well known throughout the northern country in lumbering and mining circles and took an active interest in navigation on the Ottawa River. He leaves a wife, three sons and one daughter.

J. Alex. Cumming died recently in Buckingham, Que. He had entered a barber shop to be shaved and fell dead as he was leaving. Mr. Cumming was in his 93rd year and was the father-in-law of Hon. G. Howard Ferguson, Premier of Ontario. The late Mr. Cumming was well known in Buckingham. During recent years he had retired from active life but prior to that he was for a long time associated with the James MacLaren Co., Limited, as their store manager in lumbering operations.

The rush to the lumber camps of Quebec and Ontario is already on, according to information available at the Provincial Employment Bureau, Quebec, and a record year is expected in the lumber industry. At present an average of 150 to 200 men are leaving each week to work in lumber camps in northeastern Ontario and in Northern Quebec. Interesting reports received at the provincial labor branch show that Ontario is getting a very high percentage of its lumberjacks from Quebec.

E. W. Backus, of the Brooks-Backus Co., recently paid a visit to the Kenora Golf and Country Club of which he is a shareholder. He is well pleased with the golf course. Mr. Backus last season completed a large pulp mill in Kenora and work is now proceeding on a large newsprint mill. The interest of the Backus-Brooks Co. will continue expanding year by year until the project which Mr. Backus has in hand will be realized. This is an output of 1,000 tons of newsprint daily.

The members of the British Empire Forestry Conference who during the first week in August toured Quebec and the Maritime provinces and visited many pulp, paper, sawmills and timber holdings and then returned to Ottawa to hold business sessions, arrived in Toronto recently. One day was spent at Niagara where all points of interest were visited and the following day the Ontario Government Experimental Station and plantations at St. Williams in Norfolk County were inspected. The members then left for Northern Ontario where a number of pulp and paper mills and experimental stations were inspected, and then began a tour of the prairie provinces. The conference will wind up with an extended visit to various activities in British Columbia and a final business session early in September at Victoria, B.C.

Final distribution of 9.15 per cent. is to be made to the bondholders of the Kaministiquia Pulp & Paper Co., of Port Arthur. This, with the first payment of 20 per cent. made in January last, brings the total payment up to 29.15 per cent. or \$145,750 on the \$500,000 issue of bonds. The Kaministiquia Pulp & Paper Co. was organized in 1920 and held leasehold property at Port Arthur, a license to cut timber on Magnet Point limit, and an interest in a license to cut timber in Hele Township in the district of Thunder Bay. From the sale of bonds a mill was erected, but before completion it was decided that more funds would be needed. An unsuccessful attempt was made to raise sufficient capital and about the same time the price of groundwood pulp dropped to such an extent that the limited output of the mill did not permit of it being operated at a profit.

E. W. Bowness, of the Empire Engineering Company, Edmonton, Alberta, has returned to that city from a visit to Stewart Lake in Northern British Columbia. Mr. Bowness is consulting engineer for the hydro-electric plant which proposes erecting a large pulp and paper mill in connection with the Isle Pierre rapids in the Prince George territory, his mission in the north being the estimation of water storage for the use of the proposed plant. He was accompanied by Robert Tyhurst, the representative of the pulp company, and Jack Bremner and F. P. Burden. Stewart and Tremblar lakes were visited by the party. Mr. Tyhurst has been interested in Northern British Columbia for the past three years, the company which he represents holding no less than 250 timber berth licenses. If the pulp and paper mill project goes ahead it will mean the establishment of a sixty-thousand horsepower plant and the expenditure of millions of money.

ments by rail to the United States mills. The dealers and shippers report that they are completing their contracts and that the prices of the wood per cord is the same as prevailed in January last.

Notwithstanding the proposed embargo, the American mills are not buying for next year and are no doubt under the impression that the Canadian Government will forego putting into effect the embargo. In the meantime, Quebec pulpwood brokers and shippers to the American mills are beginning to change their opinion in regard to the proposed embargo. Talking the matter over with several of the largest Quebec shippers and brokers, they admit that, while given a scare when the embargo proposition was first mentioned, in case they would be put out of business, they have since come to realize that it would not affect them to the extent that they had surmised, especially as the Government has appointed a Royal Commission to enquire into the question which they say will allow them a breathing spell to close up all their contracts with the American mills.

One of the leading Quebec pulpwood shippers in expressing his opinion which is shared by others in the business, said: "I have come to realize, after studying the proposed embargo on Canadian pulpwood that it would be a good thing for Canada. We would not materially suffer providing the Canadian Government would stay the placing of the embargo for two or three years, to allow us to complete all our contracts with American mills and, at the same time, allow us to adjust our business to meet the new conditions.

It must be recognized that the forest fires of the past spring and early summer swept over vast areas of the timber and pulpwood limits owned by the Canadian pulp and paper mills. Cutting on those areas must be proceeded with this fall and coming winter to save

the logs from the worm depreciation, which means that quantities of pulpwood will be made to supply the Canadian mills for approximately three years.

In the meantime we will be called on by the American mills for supplies which will come from the former free holdings and, at the end of the three years the Canadian mills which will have consumed all their wood cut from the burnt areas, will be ready and willing to buy from us and, by that time, I, with others engaged in the business, will see no objection to the Federal Government putting into effect the proposed embargo on Canadian pulpwood into the United States.

"Our American cliente entertain the same idea as we do in this respect and admit that the Canadian Government is justified in protecting the Canadian forests and Canada's raw material for manufactured production in Canada. At the end of three years we will begin to sell to the Canadian mills, and providing we are accorded fair treatment in prices, we prefer to sell to the Canadian plants for the reason that we would be assured of a square deal in measurements and no difficulty in monetary settlements."

Will Cut Burnt Area for Pulp Wood

Even the devastated sections of timber limits in the Province of Quebec, are not going to be left unexploited, according to the plans of the timber limit owners, who are also to be assured the co-operation of the government officials in this connection. Arrangements are being made by which trees partly burnt are to be cut immediately and used for pulp wood, so as to reduce the fire losses, to a minimum.

By modern processes it is now possible to use those partly burnt trees as long as they are not affected by flies and worms. It is

523 New Birks Bldg., Montreal

Edgings

Fire broke out recently in the lumber yard of W. H. Miller Co., of Campbellton, N.B., but was extinguished before much damage was done.

The town of Matane, P.Q., the centre of an important lumber district, has just organized a Board of Trade. The council includes A. E. Tweedell, of Price Bros., Limited.

C. A. Bourdeau, 195 St. Catherine St. E., Montreal, has been appointed representative in that city for the Buyers Door & Manufacturing Co., Limited, 374 Pacific Ave., Toronto.

The Satin Finish Hardwood Flooring Co., Limited, Weston, Ont., are installing a National dry kiln and report business as being exceptionally good.

George Towell, of Bruce Mines, Ont., has secured the contract of cutting pulpwood for the Soo branch of the Spanish River Pulp and Paper Mills. Mr. Towell will put in several camps and will operate along the line of the Algoma Central Railway.

G. H. Johnson, 568 Talbot St., London, Ont., has been appointed Canadian sales manager for the Reese-Sheriff Lumber Co., Williamsport, Pa. The company which have bought the cut of a number of Ontario mills, have opened an office in London.

R. M. Campbell, formerly with Edward Chaloner & Co., timber brokers, Liverpool, and Ellison, Banks & Welsh, timber merchants and importers of Liverpool, Eng., was in Montreal, Toronto and other cities recently calling upon members of the trade.

The Department of Lands and Forests of the Ontario Government is advertising for tenders to cut timber on certain berths between West Clear Water Lake and Trout Lake in the district of Rainy River and also in the district of Kenora, having an area of nine square miles.

A provincial charter has been granted the McCleary Lumber & Coal Co., Limited, to carry on the business both wholesale and retail in timber, lumber, forest products, coal, coke, etc., and to operate saw and planing mills. The authorized capital stock of the company is \$40,000 and the head office is at Thorold, Ont.

Bushmen and camp men are starting a general rush for the camps of the Spanish River Pulp and Paper Mills Co., up the Algoma Central Railway and other northerly sections of Ontario. W. R. McKibbin, of the woods department said recently that the company were engaging all the men that could be secured and that a shortage of labor was in sight.

Rufus E. Dickie, of Stewiacke, N.S., president of the Nova Scotia Lumbermen's Association, joined the Empire Forestry Conference at Toronto, and is accompanying the delegates throughout the western provinces to the Pacific Coast. He will be absent until the middle of September.

Robert Gass, Limited, Shubenacadie, N.S., have been very busy during the past season turning out lath of which a large quantity has been shipped to the United States. The firm are preparing to build and equip an up-to-date plant for handling long lumber and also doing other woodwork. They have recently put in a rotary planer and other machines. Robert Gass Limited have several hundred thousand feet in the log on their premises.

John P. O'Connor has been appointed manager of the branch of E. C. Atkins & Co. at Seattle, Wash. He has been connected with the firm at Seattle for many years and is well known to saw users and saw buyers in the West. The change in management was rendered necessary on account of the death of C. E. Hurlbert who represented E. C. Atkins & Co. very efficiently at the Seattle branch for a long period.

The big movement of harvesters to the Canadian West is now being paralleled on a smaller scale by a run of lumberjacks to the West and North, and it would appear from comments made by the latter, gathered in scores in the Windsor Station, Montreal, that the jobs of grain-cutting and wood-cutting are incompatible, and that a bushman would take on a harvesting job only as a last resort. A feature of the gathering of lumberjacks was the entire absence of Englishmen, the party being made up of French-Canadian bushmen, Scotch, Dutch, Russians and Polocks.

According to reports from the Riordon Company the Kipawa and Hawkesbury mills are operating to capacity. It is stated that the company has disposed of more than half the lumber cut already, and altogether conditions are very much improved over those of a year ago. There is no sign of a decline in the strong demand for bleached sulphite pulp which is the company's Canadian product. It

is stated that it will be several weeks yet before formal announcement is made concerning the company's plans of reorganization and financing.

New capital totalling \$3,160,000 is represented by companies whose incorporations were granted by the B.C. provincial government recently. Some of the important companies are: Esaray Timber Co., Vancouver, \$2,000,000; G. R. Gregg & Co., Vancouver, \$300,000; White Chief Timber Co., Vancouver, \$500,000; Coal Economizers Co., \$150,000, Vancouver, and Charles A. Butler & Co., Penticton, \$50,000.

In Montreal banking circles it is stated that the Riordon reorganization plan has now been practically completed and should be ready to be submitted to shareholders in about a month's time. One of the recent important developments in connection with the reorganization is the fact that some of the leading interests in the pulp and paper industry in Canada have been secured for the new company, and in this way it would have the benefit of several persons who have made the greatest success of similar undertakings in the Dominion.

The Esaray Timber Company, a Canadian and American syndicate, backed by Seattle, has recently purchased extensive limits from the land department of the Canadian Pacific Railway Co., located at Horne Lake, on Vancouver Island. These limits, which are located about 6 miles west of Dunsmuir station, on the E. & N. branch of the C. P. R., and about 38 miles north of Nanaimo, have been carefully cruised and found to contain some of the largest cedar and fir on the Island. The company plans to spend approximately \$750,000 in the erection of a mill, logging railway and other development within the next two years.

The department of forests, lands and mines in New Brunswick has announced a ban on slash burning except during the fall months. The ban has been urged by prominent lumbermen and pulp and paper men for the past few years. It is stated that much of the loss by fire in the forests of the province is traceable directly to slash burning in the spring and summer. Now that the slash burning ban has been announced, the question will be of enforcement. In the past, slash burning, except in May, has not been legal without permits, but this has not prevented many persons from starting the slash fires and escaping prosecution.

A demonstration of the use of radio and airplane in the detection and fighting of forest fires furnished the feature of the program arranged for the delegates to the British Empire Forestry Conference who were in Timagimi, Ont., recently. The demonstration was a most interesting one. A fire had been started in a safe place though unknown to the aviators attached to the Forestry Department who were making the flight to this point from Sudbury. The aviators, however, caught sight of the fire from their plane and sent a radio message to the chief forester's station, the message being distinctly heard by the delegates to the conference who were grouped around the receiving set at the time.

New Brunswick's loss by forest fire during the present year has been estimated at \$12,000,000 by officials of the Federal Government. That estimate was made by the Entomological Branch of the Federal Department of Agriculture and the figures have appeared in an official departmental bulletin issued by that division. It is the first definite estimate of the monetary loss. It is understood that the figures cover not only the immediate destruction but also take in consideration the future loss in the resources of the province as a result of the destructive fires which hit at the very heart of the richest virgin forests in New Brunswick. Latest figures give 700 square miles as the area burned over.

The tree and bush planting at the Ottawa Hunt and Golf Club, of Ottawa, for the season 1923 is completed. In all there have been planted 150 hard maples, 75 elms, 70 beech and white birch, 2,000 young pines, and 2,500 poplar cuttings. There has also been transplanted 150 lilacs in various clumps. About half of this material is used in planting clumps between the fairways and back of the tees throughout the permanent eighteen-hole course. The balance was used in planting the west block of land adjacent to the river and it is hoped that this latter planting will do much, not only towards beautifying this piece of land, but also to counter-act the objectionable feature of bare sand.

Although refusing to talk on the political situation in Newfoundland Sir Richard Squires, formerly Premier of that Island, who arrived recently in Montreal, quite freely spoke on the business situation as it exists on the Island and remarked that it was fairly satisfactory. He discussed at length the Humber Power Development which promises to form an important factor in the industry of the Island. This development is being undertaken by the Newfoundland Pulp & Power Co., which succeeded the Newfoundland Products Co. "The power development of the plant will amount to 200,000 h.p., designed for a production of 400 tons of paper daily," said Sir Richard.

They averaged 17 cords per load

After exhaustively testing their first Northern "Caterpillar"* Logger last winter, making closest comparisons in costs and results with other methods and machines, the Mt. Murray Woodlands Corporation of Mt. Murray, Quebec, has now standardized on "Holt" and purchased four more of these powerful tractors for next winter's operations.

Hauling day and night over common snow roads with many bad grades, each load averaged around 17 cords of green unbarked spruce, a remarkable record over those roads. By the end of last season the total cordage, the continuous operation, number of trips, low costs and the ability of the "Caterpillar" to meet every situation, convinced the Mt. Murray officials that no other machine or method can successfully compete with the "Caterpillar."

Let us give you further facts about remarkable "Caterpillar" records on this, as well as on other Canadian pulpwood and lumber operations.

**There is but one "Caterpillar"—Holt builds it*

JAMES LYONS,
Minister of Lands and Forests.
Toronto, August 24th, 1923.

N.B.—No unauthorized publication of this Notice will be paid for.

Produces Artificial Wood

By using a mixture of 50 per cent. sawdust with chalk and chemicals and subjecting these to very heavy pressure, a scientist of the Kullebund says he has succeeded in making "artificial wood," possessing all the qualities of genuine timber. Its specific gravity is the same as wood, its hardness the same as oak. It can be planed, sawed, bored, nailed, painted, stained or polished, and submitted to every process of carpentry or manufacture to which real wood is subjected.

MacLean Reports Cover Canada

MacLean Building Reports will give you accurate, advance information on every building and engineering contract of consequence in the Dominion.

These reports are issued daily and reach subscribers in ample time to bid on the work or submit prices for the machinery, equipment, materials or supplies required.

Subscriptions may be placed for any one city, portion of a Province or more than one Province. Rates range from \$85 yearly for the smallest cities to \$664.00 yearly for the entire Dominion.

Hundreds of firms are deriving much financial benefit from the use of MacLean Building Reports. Tell us what territory you cover and put it up to us to show how we can help you get more business.

Try this service out. The result will please you. Write today for rates and free sample reports.

The Best Fire Insurance and Service for Lumbermen

Rankin-Benedict Underwriting Co.
Kansas City, Mo.

SAVINGS RETURNED TO LUMBERMEN	\$2,897,595.89
LOSSES PAID TO LUMBERMEN	\$8,274,543.31
SURPLUS AND REINSURANCE RESERVE	\$2,375,621.05

A Big, Vital Business Necessity—
FIRE INDEMNITY

*So Important
 That it Must be Carried
 At Any Price*

If bought outright it is a heavy drain on the resources of any business, because there is no return of any part of the purchase price. But it need not be obtained in this expensive manner. Through co-operation among owners of similar properties, unquestionably sound fire insurance can be produced at a saving in cost which must appeal to those who understand the simplicity and saneness of the plan.

*More than 1200
 LUMBERMEN are Co-operating
 To Save Money*

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P. M. S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Rubber Footwear We make a complete line of Lumbermen's boots. For over 25 years, our Maltese Cross Brand has been the leading line in Canada. Make sure you get this old dependable brand.

SHIMER

*Ask
for
our
Catalogue*

THE wide awake mill operator who desires strictest economy with highest efficiency always specifies Shimer Fast Feed Expansion Matcher Heads.

These heads are built extra heavy where the strain is greatest, and being devoid of all angles or openings, the wind resistance is lessened, and it cannot block with shavings. The straight knives are long, which assures greater service, while the circular knives can be set back and the straight knives jointed. In this way the whole width of the straight knives can be jointed at one setting. The circular cutter is then brought to its proper position.

FIRE BRICK

AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"

"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

MERSHON

BAND RESAWS
A SPECIALTY - NOT A SIDE LINE

SIMPLEST and BEST

Wm. B. Mershon & Company
Saginaw, Michigan, U.S.A.

Relieve the Box Shook Shortage By the use of Gerlach Box Board Mills

For the cutting of
BOX, CRATE, CHAIR, FURNITURE, CABINET and
other dimension stock, LATH, HANDLE MATERIAL, Etc.
These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 40" Long

All cut any required thickness from $\frac{1}{4}$ " to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf $\frac{1}{8}$ ". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00	per M ft.
SAWING & OVERHEAD	2.00	" "
NET COST	10.00	" "

Cut Your Grocery Bills---with Swift's Premium Oleomargarine

Swift's Premium Oleomargarine is much cheaper, and for most purposes quite as satisfactory as butter. Hence, many camp operators always keep their chefs plentifully supplied.

If YOUR camp has not been using it, why not give it a trial?

In ordering, be sure to specify Swift's Premium. Then you will be sure of getting the purest, most palatable and satisfactory product of all—made as only Swift's experts know how.

SWIFT CANADIAN CO., LIMITED

LUMBERMEN'S

EQUIPMENT

A Wise Investment---a "Long" Bandmill

THE following brief description will convey more to the experienced millman than any lengthy claims we might make.

Columns of full hollow box section, connected at the bottom. Very sensitive, floating tension. Tension mechanism fully enclosed—easily accessible. Guide Blocks adjustable in all directions; quick opening, nonbreakable pattern. Upper and lower bearings the same size and interchangeable; chain oiling, water cooled, adjustable in all directions. Protected steam cylinder to operate upper guide. Dake engine to handle upper wheel.

"The supremacy of this machine in the Bandmill field is due to its acknowledged leadership in design."

The E. Long Manufacturing Co., Limited

Gormans, Ltd. Calgary and Edmonton
Williams & Wilson, Ltd., Montreal

Not Sufficient Refuse to Keep Burner Going

THE above is not a record of a few days or a few weeks, but is the usual state in a mill cutting 250,000 ft. per day with logs averaging 18 inches diameter.

The remarkable condition is due to the marvelous efficiency of the **Waterous Super Resaw** which is handling **all** the slabs and half logs in this mill.

The Waterous super resaw handles one slab at a time at high speed, consequently the sawyer is changing gauge continuously and each slab is subjected to quick analysis.

The feed is speeded faster than the man can get the slabs into the machine, leaving a space of about 18 inches between the ends of the slabs and permitting the setter to change the size instantly so that every available inch of good lumber is obtained from each slab.

In the Waterous super resaw the slab and the board separate instantly by gravity, the slab falling on the slasher chains and the board going to the edger.

Why not investigate the wonderful possibilities of this machine?

BIRCH

It has been proven beyond question that Canadian Birch is quite the equal in grade, texture and color of any grown.

The statement has been made that Canadian Birch is short and narrow. By our careful supervision of logging and sawing operations we are enabled to produce good widths and lengths. The steady, consistent growth of our Birch trade demonstrates that we ship stock of good average widths and lengths.

We have specialized in the production of Birch for the last 25 years.

Established 1874
Almost half a century in business

Yes We're in Business for Fun—

We have been accused of getting more than the ordinary amount of pleasure out of our business. We must plead guilty. The constant endeavor to improve our products and service, to meet some unusual demand, to get that rush order out on the dot—these things keep us on our toes and hustling. We have an organization that takes pride in achieving the impossible, that strives every minute to please our customers. When YOUR order comes in we get together and work for YOU, and all other considerations aside, it's FUN to give you something better than you could get elsewhere.

SASH DOORS TRIM

OTTAWA PLANING MILLS.

From the Tree to the Finished Product

We operate our own mills, cut our own logs and saw the timber that goes into our sash, doors and trim. Our mill at Davidson, Quebec is one of the most modern of its kind, one link in the chain of service that permits us to quote rock bottom prices.

Manufacturing Plant of James Davidson's Sons, Ottawa, Ont., Canada

Mr. Dealer: You know that home builders are showing an increasing concern in the quality and appearance of the interior trim they use. Are you able to please them every time at bottom prices and leave a generous margin of profit for yourself? That is what you can do if you carry our line of doors, sash, blinds, etc. Every piece is carefully manufactured of selected stock and well finished. Also inquire about our portable houses, refrigerators, boxes and shooks.

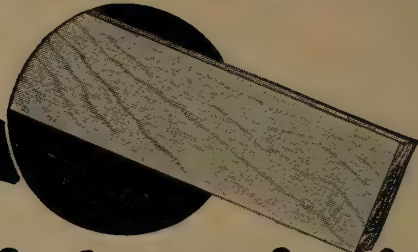

Write for our catalogue and price list today.

JAMES DAVIDSON'S SONS

OTTAWA CANADA

Long Bell Hardwoods are dependable

Why

Careful Drying
Uniform Grading

~ other reasons ~

Logs from our own virgin forests.

Each log selected and cut for the purpose for which it is best adapted.

Class of timber producing excellent widths and lengths.

Manufactured in our own hardwood mills, equipped with modern band machinery.

Manufacture supervised by experienced hardwood men.

Thoroughness given every detail of manufacture.

Particular care given to uniformity of thickness—carefully edged, equalized and trimmed.

End-buttred with mitre toothed saws.

Easily identified by the Long-Bell trade-mark on the end of the board.

To insure dependability Long-Bell Hardwoods are subjected to careful drying and strict, uniform grading.

The stock is carefully sorted at the chains.

Drying yard is arranged to give thorough circulation to stock in pile.

Every detail in sticking and drying carefully observed to insure best results.

Experienced inspectors grade lumber for shipment.

Double check inspection at cars in loading to insure uniform grades.

Same care exercised in loading in car as in manufacture.

The Long-Bell Lumber Company
R. A. LONG BUILDING Lumbermen since 1875 KANSAS CITY, MO.

To the Hardwood Manufacturers, Wholesalers and Consumers of the Dominion

Canadian Hardwood Manufacturers:

How often do you ship a stock of Hardwood on grade and wonder if your inspection will be right?

NATIONAL CERTIFICATE ATTACHED DOES AWAY WITH ANY WORRY.

Are you certain you are being paid for all First and Seconds in your stock?

NATIONAL INSPECTION GUARANTEES THIS.

Do you ever have arguments with your customers over grading?

NATIONAL INSPECTION WHERE MUTUALLY AGREED UPON IS FINAL BETWEEN BUYER AND SELLER.

Canadian Wholesalers:

Ask the man who ships under NATIONAL INSPECTION what he knows of the Inspection Service in Canada. Ontario Market—Four Inspectors under the capable management of Mr. Jack Cadenhead; Montreal Market—Three Inspectors under another capable man, Mr. H. L. Hebard.

Canadian Furniture, Automobile, Carriage, Implement, and other Wood-working Industries:

Do you know that you can now enjoy the full benefits of the NATIONAL HARDWOOD INSPECTION SERVICE?

At the Twenty-sixth Annual Convention of the Association held in Chicago, June 13th, 14th and 15th, 1923, a measure was introduced and unanimously adopted authorizing the admission to associate membership of any individual, firm or corporation in good standing engaged in the fabrication of hardwood lumber into manufactured products. It was further provided that no initiation fee should be charged for associate membership and that dues for such membership should be \$50.00 per annum. Furthermore, that the relationship of associate members should in no wise alter existing rules and regulations of the Inspection Department applying to and between active members of the Association and that associate members can receive official inspection service on the payment of the same fees and expense as active members.

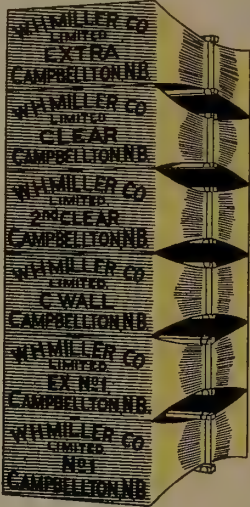

Do you ever think what the effect of the NATIONAL HARDWOOD ASSOCIATION EMBLEM on the top of your purchase orders will have on the shipper. It is your GUARANTEE that you will get the exact grades which you order. W. F. Oliver of the Oliver Lumber Co., Ltd., Toronto, Director of the Association for Canada will be glad to talk the matter of your membership over with you further. Drop him a line and he will make a point of seeing you, or write the Head Office direct for more information.

Jim Retailer tells why

"Let me tell you why I go to the Bennett Lumber Company for my requirements—it may help you when you're up against it for something extra good."

"In the first place, I find Bennett lumber invariably pleases my customers. Some of the best I have were originally attracted to my yard by the Bennett lumber piled there. Then, again, the Bennett people give me real service—large or small, my order is always given immediate attention and filled to my liking. Lastly, their prices are such that I can offer a little better value than my competitor and still have a good margin of profit."

"If that's the kind of business-dealing you like—don't hesitate about sending your next order to Bennett."

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
 6,000,000 ft. birch annually
 2,500,000 ft. beech annually
 2,500,000 ft. elm annually
 900,000 ft. basswood annually
 200,000 ft. ash annually
 6,000,000 ft. hemlock annually
 3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

“There’s a Hardwood Flooring You Can Stake Your Reputation On!”

When we began producing “Renfrew” Brand Hardwood Flooring we set out to establish new standards for this product.

We determined, first of all, that it would represent the greatest value on the market; that we would stand behind every shipment leaving our plant; and that we would give the dealer greater service and co-operation than he had heretofore received.

That this policy has met with the approval of the trade is best shown, we believe, by the increasing number of dealers who handle “Renfrew” Brand and the letters of appreciation constantly reaching our office.

If YOU haven’t investigated the possibilities of this product, let us forward full information now,

“Empire Brand” Hardwood Flooring

**MILLING
IN
TRANSIT**

Two facts stamp “Empire Brand” flooring as a good sales proposition for the lumber merchant. The first is this—it is a “quality” product and uniform. The second—it is sold at a very reasonable price.

Now you may have heard that kind of talk before. Sometimes it's true. Sometimes it isn't. Here is one case where it is.

You can come to us with confidence.

"DALHOUSIE" BRAND WHITE CEDAR SHINGLES

This brand has a reputation for its uniformly good quality.

Give them a trial. We guarantee satisfaction.

No doubt you hear a great deal more about "service" than you actually receive. Perhaps the service you do get is not up to the mark. If this is so, give "Dalhousie" a trial. Then you are sure of not being disappointed.

We particularly call your attention to our White Pine in the 1", 2" and 3" thicknesses. This, we are told, is not equalled anywhere in the lower provinces.

Quotations gladly forwarded.

BUY BRITISH COLUMBIA Red Cedar Shingles

The life of a British Columbia Red Cedar Shingle Roof can almost be gauged by the life of the nail with which the shingle is nailed in place. Judging from available data, the average life of the ordinary steel wire nail, which has been in such common use, is only from seven to twelve years. Some wire nails will last longer, depending upon the condition of exposure, climate and similar features, but considering our climate as a whole, at the end of from seven to twelve years a large percentage of wire nails will have rusted either completely through or so extensively that the first strong wind will complete the work. The shingles that have been held in position by such nails are then free to work down, permitting rains or melting snows to leak through and damage the interior of the structure. Examination will disclose that the fibre of the shingle itself is still in perfect condition, and a leaky roof, in the majority of occasions is due entirely to the use of faulty nails, but the average home owner, placed at such inconvenience, will not stop to reason this out and the poor wooden shingle comes in for more unjust abuse.

There are several kinds of nails which experience has proven will give lasting satisfaction, and the wise dealer will advise his customers of these satisfactory nails. A pure zinc shingle nail meets all the demands of durability required. Its principal drawback is its high cost and a slight tendency to bend under careless driving. Galvanized wire nails theoretically are rust proof, and if the galvanized coating is properly applied, and of sufficient thickness, such a nail will last as long as the shingle it holds in place. The life of this shingle roof, properly applied with these nails then is from 40 to 50 years. Pure iron nails, or the old cut or wrought nails are ideal but difficult to secure. Copper nails also constitute a perfect shingle nail.

Black Birch for Beautiful Floors

Wears as Well as the Hardest Maple

The increasing sale of Birch Flooring is due to its natural beauty and the fact that it holds and absorbs the finishing oils and stain better than any other hardwood. Black Birch yields wood of two colors—white and red. "Selected White" can be finished in any desired shade to harmonize with the interior trim. "Selected Red" becomes a rich mahogany floor and is being chosen for the drawing rooms of Canada's finest homes.

Clear, No. 1 and No. 2 Flooring which is sold irrespective of color, meets the requirements of schools, offices and public buildings where the wear is considerable. Muskoka-grown Birch wears as well as hard Maple and is much more uniform in color.

"Red Deer" Brand Birch Flooring is Birch at its best. It will increase your sales.

"RED DEER" BRAND FLOORING IS AN ALL-CANADIAN PRODUCT

*Link up with the
largest producers of
hardwood flooring under
the British Flag --*

SEAMAN-KENT HARDWOOD FLOORING

EVERY year, scores of dealers are recognizing the advantages of linking up with an organization which has become, through its successful sales methods, the largest producers of hardwood flooring in the British Empire. Every year, the dealers who carry Seaman-Kent Flooring find their sales jumping and their profits increasing as the tremendous publicity campaigns search out the buyers.

There are fifteen hundred of these dealers now, but they cannot cope with the demand. HERE lies your opportunity. Seaman-Kent Hardwood Flooring is known to your trade. It is consistently the finest obtainable and is backed by a real service. Begin handling it now and you cash in on a waiting market. Get this extra business. Particulars for the asking. Write TODAY.

Progress comes with organization.

Organization begins with an Ideal.

The Seaman-Kent Company's exhibit at the Canadian National Exhibition 1923. One of the forms of publicity adopted to keep "Beaver Brand" flooring before the public eye and to assist in the promotion of dealers' sales.

FEW business enterprises have shown such a phenomenal growth as that of the Seaman-Kent Company. From a modest beginning of but a few years ago, it has developed into an immense organization whose combined plants have a capacity of over half a million feet of hardwood flooring per day.

Mr. Frank Kent, president and general manager of this great organization, years ago visualized a popular demand and a tremendous market for hardwood

flooring. That his vision has been more than realized is evidenced in the widespread demand for Seaman-Kent flooring, and the great institution of workers and equipment organized to manufacture and distribute it.

The Seaman-Kent "Beaver Brand" trade mark has proved a dominant factor in developing the hardwood flooring industry, because it has been backed by powerful publicity, and is a hallmark of quality on every length of flooring that leaves any of the Seaman-Kent Company's factories.

**"EDG-GRAIN"
SHINGLES**

Can't Warp, Cup or Curl

A roof is only as strong as its weakest shingle. BRITISH COLUMBIA "EDG-GRAIN" INSPECTED SHINGLES are 100 per cent. edge-grain—they can't warp, cup or curl. An independent inspection is based on the following standard:

All "EDG-GRAIN" SHINGLES must be 100 per cent. edge-grain—free from knots, shakes, worm-holes and sap, with smooth surface and butts.

A national advertising campaign is familiarizing the home-builders with the superior qualities of British Columbia's 100 per cent. "EDG-GRAIN" SHINGLE. Dealers who stock BRITISH COLUMBIA "EDG-GRAIN" SHINGLES will reap the results of this advertising. Send us your name and address. We'll be glad to place you on our mailing list, supplying you with information from time to time regarding BRITISH COLUMBIA "EDG-GRAIN" SHINGLES.

British Columbia Red Cedar Shingles

NOTE—KEYSTONE BRITISH COLUMBIA RED CEDAR SHINGLES carry the registered Trade-mark "EDG-GRAIN." They are subject to an independent inspection which guarantees them to be 100% Edge-grain; consequently, cannot warp, cup or curl.

HOME-BUILDERS are demanding three essentials in building materials for roofs and side-walls. Low first cost, permanency, and attractiveness. KEYSTONE BRITISH COLUMBIA RED CEDAR SHINGLES comply with these requirements. THEY ARE MANUFACTURED from BRITISH COLUMBIA RED CEDAR—a Wood which Nature has endowed with a time-resisting preservative, making them immune to rot-promoting fungi and insects; the home constructed with KEYSTONE roof and side-walls costs less than the home constructed with any other building material; the beautiful redish-brown cedar shingle blends with shrubs and flowers in a manner that is most pleasing. Unquestionably, you are offering your customers the biggest value for their home-building dollars when you offer them KEYSTONE BRITISH COLUMBIA RED CEDAR SHINGLES.

HOCKEN PINE

Commands a Ready Sale

HOCKEN Red and White Pine are specialized products, manufactured from small logs cut in the La Cloche Hills district—limits famous for their clean, straight-growing timber. The consistent high quality of this pine and its freedom from defects quickly builds a reputation for the dealer who carries it and becomes apparent in increased business and profits.

How about you Mr. Retailer? Do you want this extra business? Hocken Pine is graded liberally and priced to leave a good margin for you. Shipments will be made promptly. Let us quote.

Quality Counts When the Price Is Fair

FOR more than half a century, G. A. Grier & Sons' lumber has established and maintained a reputation for consistent high quality. All local and British Columbia forest products are carefully selected, well manufactured and accurately graded. Buyers are thus assured of getting the finest lumber at prices which are at all times kept close.

These are facts which are well known to all who have used our service. They are facts which mean increased business and profits for you as soon as you put them to the test with an order. Get our quotations on your requirements, and learn what real lumber satisfaction is.

Timber Bargain on Waterfrontage

We have been authorized to sell Three (3) British Columbia water front timber licenses, located at the Head of Pipestem Inlet, Barclay Sound, Alberni Canal, Vancouver Island, B. C.

These properties are offering at a bargain price and we beg to submit for your consideration, a synopsis of the cruise made in September, 1913, by Brayton & Lawbaugh, Limited. Mr. John McShane, deceased, who was well known in Vancouver, also cruised these limits and his estimates are shown below.

PARTICULARS OF JOHN McSHANE'S CRUISE, August, 1910:

Lots 909 (T.L. 9547), 908 (T.L. 9545), and 907 (T.L. 9546), commence on the North shore of Pipestem Inlet, near the head. The ground is very good for logging as a whole; there is some steep ground in places, also some cliffy spots, but there are good chances for logging roads to nearly all of the timber. It is what would be known as a Cedar proposition, but the Hemlock, Larch and Fir are all a good clean run of timber and should cut well. The Cedar is of the first grade quality and will go well to clear; the Pine, which is scattered all through, seems to be sound and thrifty and goes from 12 in. to 2½ feet in the stump. There is a large creek flowing South East through Lots 907 and 908, also other smaller creeks flowing South through 909 to Pipestem Inlet, that will furnish plenty of fresh water for logging purposes. There is a total of 51,830,000 feet on these three lots.

SYNOPSIS OF McSHANE'S CRUISE:

Timber License 9545640 acres18,210,000 feet
Timber License 9546640 acres20,500,000 "
Timber License 9547500 acres13,120,000 "
TOTAL		51,830,000

SYNOPSIS OF BRAYTON & LAWBAUGH'S CRUISE, September, 1913:

T.L. 9545—13,400,000 feet.	Included in this estimate	Piling—7010 Pcs.	Av. length 45 ft.	"S" Dia. 14 in.
T.L. 9546—24,277,000 feet.	Included in this estimate	Piling—10620 Pcs.	Av. length 35 ft.	"S" Dia. 14 in.
T.L. 9547—10,550,000 feet.	Included in this estimate	Piling—4550 Pcs.	Av. length 45 ft.	"S" Dia. 14 in.

Total48,227,000 feet Total Piling.....22180 Pcs.

Cedar Poles: The above cruise also shows that there are in all, 11,960 Cedar Poles on these three licenses, with an average length of 35 ft., with an "S" Dia. of 14 in. **These poles are not included in the above total.**

TIMBER LICENSE 9545.	Cedar Poles—2670 Pcs.	Av. length 35 ft.	"S" Dia. 14 in.
TIMBER LICENSE 9546.	Cedar Poles—6600 Pcs.	Av. length 35 ft.	"S" Dia. 14 in.
TIMBER LICENSE 9547.	Cedar Poles—2690 Pcs.	Av. length 35 ft.	"S" Dia. 14 in.

Total 11,960 Pcs.

PRICES AND TERMS:

Taking an average of the above two cruises, you will find there is anyway 50,000,000 feet of timber on these three claims, and under the Brayton & Lawbaugh cruise the figures show 28,570,000 feet of Cedar. This 50,000,000 feet average, however, does not include the 11,960 Cedar poles.

We can deliver these three licenses at a price of 65c per 1,000 feet, figuring fifty million feet, or the sum of Thirty-two thousand five hundred (\$32,500.00) Dollars. We will make reasonable terms to suit the purchaser. **We will also entertain a lower figure for an all cash offer.**

COMMISSION:

We are prepared to pay a reasonable commission to any Broker who disposes of this timber for us at a price and on terms to be confirmed by us.

NECESSARY TIME TO MAKE CHECK CRUISE:

If we are satisfied that you are interested enough to send your cruiser to inspect this property, and desire sufficient time to make a check cruise, we are prepared to grant the necessary Binding Option to protect you for a reasonable period. This is a matter for negotiation at the time you wish to send in your cruiser.

ROYALTY CHARGED BY B. C. GOVERNMENT:

Grades 1 & 2—Fir, Cedar and Spruce—\$1.22 per 1,000 feet. All Hemlock, and Grade 3 of Fir, Cedar and Spruce, 87c per 1,000 feet. Shinglebolts, 25c per cord.

The above fees remain in force until the end of 1924.

COMMENTS:

The above price of 65c per 1,000 feet for water front timber, well located such as this, is considered today a bargain price on terms. If an all cash offer were made, you could figure roughly that the claims were costing \$1.00 per 1,000 feet for Cedar alone, and the balance of the timber, roughly 22,000,000 feet, would be secured free of cost, never to mention the value of 11,960 Cedar Poles.

IMPORTANT:

We have prepared an illustrated pamphlet which gives particulars of the above cruises, showing the various kinds of timber, quality and quantities. The pamphlet contains a map showing the exact location of the timber and also the cruise and elevation of each forty-acre section. This pamphlet will be mailed to you upon request.

This timber is listed subject to our confirmation, previous sale, change in price, or withdrawal without notice.

Please mention *Canada Lumberman* when writing any of these Advertisers

Mr. Lumberman!

RIGHT at this moment you are figuring on buying your rubber footwear requirements.

What you would like to know definitely is, what is the best brand of rubber footwear made? Where can they be purchased?

We have the answer correctly, an answer that is backed by a reputation that has been held amongst the lumbermen for over 70 years.

"Gold Seal" TradeMark is held in the same high esteem as the "Sterling" mark on silver.

American **"Gold Seal"** Brand Rubber footwear was the first—and is the last word in High Grade rubbers. Being superior in Quality, Comfort and Make, all we ask, (if this brand is not known to you) is to let us express you prepaid for your approval, samples of numbers used by lumbermen throughout the United States and Canada. Permit us to take the opportunity of proving to you the merits of **"Gold Seal"** Quality.

"LINCOLN"

in 18—10—12—14—16" high, in either black sole with black leather top, black sole with tan leather top, red sole with tan leather top, all red sole with tan leather top, can be had with and without heel.

"Gold Seal" will stand the test of comparison.

We also carry a complete line of **"Sturdy"** solid leather work shoes in all heights, Genuine Buckskin and Horsehide Mocassins, Drawstring Packs and Farm Boots, welt and tap sole, heavy, long and short Wool Socks.

"HURON"

A low shoe to be worn over heavy lumbermen's socks.

"SPORTO"

11" high, Pure Para Rubber. Reinforced and strengthened. No shoddy substitutes to peel or crack.

This is a sturdy real rubber shoe for lumbermen who give their shoes the hardest kind of wear.

Write for samples and quotations.

(Hotel size) Powdered Skimmed milk in 10 lb. tins with the blue and white label.

Camp Provisions

Pure - Wholesome - Economical

FOR seventy years, C.P.C. products have been the choice of an ever-increasing number of Canadian lumber camps.

For seventy years, men who are expert in the science of provisioning a camp, have been saving Canadian lumbermen untold time, trouble and expense.

This same house is at your service, too, anxious to give you the benefit of their long experience and extensive facilities.

Long Clear,
Barrelled Pork,
Barrelled Beef,
Hams, Bacon,
Lard, Butter,
Sausage, Eggs,
Cheese, Short-
ening, Canned
Goods, etc.

C. P. C. products cost no more than the others, yet their purity, wholesomeness and flavor are unmatched. Add to this the

company's facilities for delivering the goods promptly — anywhere in perfect condition, and you have the real reasons for their popularity.

This is the time of year when the question of provisions is in your mind. Why not settle it now by giving C. P. C. products a trial?

Paint Those Timbers!

Good Housekeepers Lessen The Fire Hazard— Prevent Oil-Soaked Timbers With Tropical Oil Resisting White

YOU are paying for Paint, you know, whether you use it or not.

Insurance costs you more. You waste oil without knowing it because excess oil soaks into the timbers—these are a constant fire menace if unpainted.

In many plants the oil waste from over-lubricated bearings is sufficiently great to pay for Tropical Paint in less than a year. Tropical's gleaming whiteness and its resistance to oil reveals this waste to oiler and clean-up crew. The timbers are regularly wiped clean of oil, dust and dirt.

Ask the Underwriters how much insurance you can save by using Tropical Oil Resisting White.

Return the coupon below for a test board which will show you what a difference Tropical Oil Resisting White will make in your mill.

The Tropical Paint & Oil Company
1241 West 70th St., Cleveland, Ohio

Approved by Fire Underwriters

Tropical is the only Oil Resisting White Paint approved by the National Board of Fire Underwriters, the U.S. Epperson and The Rankin-Benedict Underwriting Companies.

Oil Soaked Timbers are the most dangerous fire hazards in the mill. A spark or an overheated bearing and the plant's up in smoke in no time.

Borden's St. Charles Milk

Economical—Pure—Rich

Your Men Need Milk

Men work best when well fed—an abundant milk supply together with frequent servings of cream with dessert will keep them contented and willing.

It is a scientifically established fact that milk is an absolute essential in the diet of every man who does a hard day's work.

Therefore keep plenty of Borden's St. Charles Evaporated Milk in the cookhouse. Use it for cooking, dilute it with water for milk with the tea and coffee, serve it pure as cream with puddings.

Borden's St. Charles Milk is simply pure rich milk from which a part of the water content has been removed.

Keeps almost indefinitely. Needs no refrigeration. Put up in four convenient sizes.

Province of Quebec

TIMBER LANDS

License or permission to cut timber on public lands in this Province is acquired at public auction, after due notice has been given, subject to a yearly ground rent per square mile of \$6.50 for the years 1919-20 to 1923-24 both inclusive and of \$8.00 for the years 1924-25 to 1928-29 both inclusive.

The timber cut in virtue of such license is subject to a tariff of dues fixed by order in council.

Licensees are forbidden to cut on Crown lands trees less than a fixed diameter. The Regulations also provide that all timber cut on Crown lands must be manufactured in Canada.

In the event of a licensee wishing to transfer his rights, he is at liberty to do so under certain conditions, namely, the paying of a fee of \$4 per square mile.

There are at the present time about 75,000 square miles of forest lands under license and over 150,000 miles in the possession of the Crown.

WATER POWERS

To obtain authorization for the utilization of a Water-Power in the Province of Quebec, application should be made to the Honourable Minister of Lands and Forests.

Water-Falls capable of developing over 200 H. P. are granted under emphyteutic leases, the conditions of which are upon the following lines:

1—Duration of the lease, from 25 to 99 years, according to the importance of the water-power and to the amount of capital required for its development.

2—Payment of a yearly rental which does not vary during the term of the lease, for the land granted, counting from the date when the contract was signed.

3—An additional yearly charge of from 10 to 25 cents per H. P. developed, according to the geographical situation of the site of the water-power; such charge being payable from the time the power is produced.

4—The charge referred to in article 3 is subject to revision every 21 years, counting from the signing of the contract.

5—Delay of 2 years for beginning works and 2 further years for producing power.

6—The lessee to make a deposit in money or in securities as a guarantee of good faith for the carrying out of the contract. Such deposit may be forfeited if the conditions are not fulfilled; but, in the contrary case, it may be refunded after a certain time.

7—Lastly, the grantee must submit plans of his works, mills, etc., to the Department previous to their installation, and, when such installation is completed, he must keep the Department informed as to the quantity of power produced.

No. 18

Exponents of the Great Lumber Industry Have Faith in Its Future

Whirl Around the Arena Shows that Economic Conditions are Sound, that Confidence is Firmly Established and that Coming Year Should be One of Steady Business and Satisfactory Returns—Co-operation of the Various Branches Stronger Today than Ever

The annual number of the "Canada Lumberman" is always looked forward to with much interest and appreciation and this year's production surpasses all previous efforts in variety of editorial contents and volume of interesting advertising. For over forty years the "Canada Lumberman" has been the great national pioneer journal of forest products in the Dominion, being founded in 1880. Its growth has been steady and substantial and has kept pace with the advancement and welfare of the vast industry which it has represented. It is regarded by exponents of all branches of the business as an authority on lumber matters and is read by all those directly or indirectly connected with this national calling.

In this edition edifying articles are presented on topics interesting to the trade both from a practical and business standpoint and every effort has been put forth to publish information that will be found timely and helpful to lumber manufacturers, logging operators, wholesalers, retailers and others, and in its earnest effort to reach a higher standard of service and usefulness the cordial co-operation of many friends is gratefully acknowledged. Only through the support and goodwill of readers is it possible to keep a paper bright, attractive and instructive.

It is always interesting to read what the other fellow is doing and to learn the progress that he is making. The days of jealousy and jaundice have passed and men are learning to co-operate as well as compete. This is evidenced in association work on every side and there is not the old-time desire to get ahead of the other fellow or to put one over on him. To come out in the open and do things frankly and above board is the spirit of today. Honesty and integrity stand for something worth while and he, who pursues a straight course and renders good service and lives up to his word, is the one who wins out in the end. He may not accumulate the largest amount of money or live in the costliest mansion or arrogate to himself artificial airs, but when his course is run, it will be found that he has fought a good fight and men will pay tribute to his splendid record, his clean career and noble ideal.

Forging ahead at the expense of one's fellows, seeking to take a crack at the other fellow, rounding sharp corners and engaging in double-hand deals, may appear spectacular but, in the end, they do not avail a great deal. The things that are worth while are built up by slow process and earnest endeavor. The name and reputation of a firm, its standing in the community, the confidence which people repose in it, are not of a mushroom growth. They have a solidity of character which is more than a mere momentary creation.

There are names in the lumber line to-day that are household words of good repute and square dealing. Business has descended from father to son and even to grandson, and it must be a source of great satisfaction to those of the present generation to look back and see how well the founders of these businesses built. The lumber industry is one that requires patience and perseverance as it has many things to contend with from governments, legislatures, railways, municipalities and labor unions.

While this article is not intended to be a thesis upon this great pioneer industry, the arguments put forth may savor of something of

that nature. The lumberman, of course, has in the past been able to defend himself, but more misapprehensions exist in connection with his business than with any other vocation. He has to suffer the slings and arrows of attacks from within and without and there is a disposition to tax and assess him to the utmost. His calling is of a highly hazardous and venturesome character. No man, who halts or hesitates, and builds on his fears rather than his ambitions, will ever go far in becoming a successful operator. The lumberman has to take all sorts of chances with the elements, markets, transportation, legislation, labor, etc., and if his rewards are at times large, it must be remembered that he has toiled patiently for results with heavy odds and has taken "a long shot" in every instance. While he may make a fair sum this year, conditions are apt to be reversed the next and any advantage gained is lost and the operator finds himself under heavy obligation to the bank, or with a gigantic stock on hand for which there is no foreign or domestic demand.

Much might be said about conditions of trade during the past year, the present state of affairs and the outlook for 1924. Every lumberman is anxious to learn whether business will be good or bad and to what extent logging operations will be carried on this winter, whether structural activities will continue, how fall collections will be met and industrial revival develop. There are so many currents and cross-currents that it is not possible to make any authentic predictions. The war has upset numerous standards and theories, cast aside many precedents and uprooted every tradition and he, who would turn prophet in these days of shifts and shoals, is venturing upon thin ice or inviting trouble aplenty.

The exponents of the great lumber industry will continue to have faith in its future as they have had in its past. They will not evidence uneasiness or unrest but will press forward with calm assurance and tranquil mind conscious that business is going to be better this fall than it was a year ago and that production and consumption will be more equalized, that stocks in the majority of instances have been greatly reduced and the way is cleared for extension and expansion in every direction.

The uses of wood are increasing on every hand. Each fresh development in science or invention calls for a greater employment of the products of the forest in one shape or another. Canadian woods stand the test of time, wear and service and it is incumbent upon all branches of the lumber business to keep the three P's ever before them,—pep, push and production. One should remember while new methods have been created in order to widen trade and increase turnover in the lumber game, that after all, the closest cultivation must be with the retailer. He is the man who stands between the producer and the public, being the instrument of goodwill and the medium of distribution.

The retail lumberman can do much to encourage home-building and develop the community spirit. Without pride in one's environs and in one's own town or city, no real progress is made and no go-aheadiveness evidenced. More homes mean more industries and more industries spell more homes. They are closely related and have a most important bearing and association.

How Representative Manufacturers Arrive at Cost of Lumber Produced in Their Sawmills

—The Different Systems Employed—

The study of sawmills and logging costs is always interesting, and knowing how to figure them properly is most important. A new word was created in the realm of industrial estimates a few years ago, known as "guesstimating." In these days of keen competition and highly specialized methods, it is necessary that all the "guess" should be cut out and only facts known. There are, of course, different systems in arriving at the same conclusion as there are various roads that take one to the same direction. The main thing is to discover the quickest, safest and shortest route. Naturally there will always be differences of opinion regarding what should and should not be charged up as costs, how certain items of expenditure should be appropriated and what proportion of expense certain facilities of the mill should bear in relation to allied products, etc.

Many producers are losing money to-day because he does not ascertain what his costs are or should include. He thinks he is making a profit when he is really turning over his stock at a loss. He is drifting along without any definite means of knowing where he is at in the matter of reducing costs. In this respect he is not unlike the motorist hurrying along the road humming,—"I don't know where I am going but I guess I am on the way." Minus a speedometer the driver has no knowledge regarding distance, speed or location but thinks he is travelling in the right direction by viewing the sun or taking a look at the distant hills.

It is always best to know the when, and where, and the "Canada Lumberman" is devoting considerable attention to the application of "costs" in the production of lumber and by-products. Practical problems are always of intense interest and every man should know whether or not he is making money in the vending of his output. This is one of the first essentials of a successful business.

Recently "Enquirer" sent the following letter to the "Canada Lumberman":—

I am running a lumber business with a saw mill in which I have a lath machine, box plant, shingle machine, planing plant and the wood waste from the mill is sold for fire wood purposes and delivered by teams.

To arrive at the cost of the long lumber and the piling of it on the wharf, I deduct from the total wages paid at the mill the wages at the planing mill, lath machine, shingle machine and wages of the men employed in cutting the wood and also the teamsters and teams delivering, debiting these to accounts kept for each of these items, thus showing the actual cost to manufacture long lumber.

This method has been questioned by some manufacturers and they state that is not the way to figure out the long lumber but, that the whole cost of the wages of the mill including lath machine, fire wood and planing plant should be added; these others being by-products should not be considered in arriving at the other cost.

I would like to know how lumber merchants handle this cost accounting or if they do it the way I do it and if not, what method they employ?

Charge up Every Mill Item

Information on the foregoing points has been sought from a number of representative firms who, while their methods may differ somewhat, still in the end seem to have arrived at a satisfactory basis by efficient and definite meth-

ods of cost accounting. It is interesting to study the replies and the ideas that have been set forth.

A leading Montreal firm says:—We arrive at the cost of our lumber by charging to manufacturing, everything that cannot be charged to bush operations of payments for logs; that is, every expense connected with the mill, its original cost, keeping up, repairs, taxes, insurance, etc., are charged to manufacturing as well as all the wages. Hence, if it costs \$25,000 to manufacture \$100,000 worth of good, we have the real cost of manufacturing. The fire wood usually covers the expenses of teaming it.

As for the so called "by products," they are no more or not less than a certain proportion of the logs which are manufactured into these products instead of being sawn into boards and planks.

To arrive at the cost of producing shingles and lath, every mill has to do its own figuring, as this altogether depends on the quality of the wood supplied to the machines.

We however, emphasize the method of charging to manufacturing account, as already stated, everything that cannot be charged to the production or to the cost of logs, as this shows the exact amount to be added to every thousand dollars of goods, for its production.

Sawing lumber for the last few years has cost between \$3.00 to \$12.00 depending altogether from what point of the operations one begins and finishes to call it sawing.

As for ourselves, though we only run our saw mills from May until October, our sawing account runs from the first day of January to the thirty-first of December. Every day, there are expenses connected with our mills and even during the night, the watchman keeps them going.

Using this way of figuring, sawing lumber this year has cost \$12.00 per thousand feet or just about.

Getting at the Actual Cost

An Ottawa firm adopts the following:—With reference to the cost of production of lumber, will say that men are put into the woods, they take out logs, and when the season's operations are completed, these logs cost so much per thousand, delivered into the Ottawa River. Then, the Upper Ottawa Improvement Co., takes charge of all limit holders' logs delivered into the main stream and the driving charges amount to so much, to the point of destination. These driving charges are added to the bush costs, and that gives the total cost of the logs back of the saws.

The following Spring, these logs are sawn up, and at the end of the season, the total cost of sawing, including overhead, insurance and interest is charged against the lumber put into the piles. In our particular case, we contract and sell our firewood at the tail of our mill; the revenue derived from that firewood is deducted from the total sawing cost and the number of feet produced, divided into the total money expended, gives the cost per thousand feet, figuring lath at 5,000 pieces to a thousand feet of lumber. This we think is about the only way the actual cost of lumber production can be arrived at.

Cost of Sawing Against Various Products

Another eastern firm says:—The method used by your correspondent, in arriving at his cost, would seem to us to be correct. In our own case we charge the cost of sawing against the different products, based upon the number of actual hours worked. In addition we make a material charge for the laths and slabs, based upon production, and

for the shingles, on the actual lumber used. We also distribute the overhead expense proportionally between these operations.

The other method will give you the same result in the end, as regards profits, but it does not seem to us that a manufacturer, who is operating in this method, has got a sufficient grip upon his costs.

A Central Ontario lumber company remarks that "a man desires for his own information to know what all the different departments in his business cost and we think that your correspondent figures his costs correctly."

A Northern Ontario lumberman declares:—We believe that the inquirer is quite right in his method of book-keeping. In all of our operations we have always endeavoured to arrive at the net cost of all of our products be they, standard or by-products. If the by-products are not a seller on the market we do not consider them as an asset to us and add the cost of same to our standard products.

In all cases we try to get the different costs separated. We find this very useful when we are overloaded in any one kind of manufactured article, that we want to sell at a close figure. If our costs were lumped we would not have the information required, and then it would be a matter of hit or miss as to profit or loss. Our contention is that the moment you have a regular market for an article, that this article should not be considered as what is usually termed as a by-product as far as cost system is concerned.

"I have no intention of getting into a controversy on a question of cost accounting in saw mills," writes a lower Quebec man. "I have, however, read over the matter referred to, and would say that "Enquirer" is right.

Should Be Kept Under Six Headings

The manager of an eastern Quebec firm goes deeply into the question and offers some valuable suggestions. He says: I do not agree with either methods suggested by your correspondent. It is my opinion that the costs of such an operation as outlined ought to be kept under six different headings, viz.

First: Sawmill Expense. This account ought to include charges for labor and upkeep of the sawmill, including supplies, etc., which pertain to the manufacture of lumber only. This would be cost of taking logs from the pond to the piling of the lumber in the yard.

Second: Lath Mill Expense. This account ought to include the labor of picking out lath stock, the manufacturing and handling of the lath to the pile, and all supplies, as well as the upkeep of machines.

Third: Box plant. This account ought to include the labor of taking the lumber over from the mill or yard, whichever the case may be, as well as the labor of running this plant, the supplies and the upkeep of machines until the product is complete for the market. In either case the lumber ought to be measured as it goes to the machines, so that you would know the loss in cutting up, as well as the cost of manufacturing its product.

Fourth: Shingle Mill. This account ought to include the cost of supplying the logs or blocks (and measurement made of all stock supplied so you could include this in the cost of production), as well as labor and supplies in the actual manufacture, including the hauling of waste and the upkeep of machines.

Fifth: Planing Mill. The account ought to include labor for taking the lumber from the mill or yard until stock is actually ready for the market, as well as the supplies and upkeep of machines. It would, of course, be necessary to keep track of the actual quantity of lumber which goes through the mill, to arrive at the cost per M. feet.

Wood Account: This account ought to bear all the costs of handling the waste, such as blocks and slabs too small for lath, from the mill, picking them out, hauling and piling, and delivering at time of sale. Whatever waste that comes from the box plant, which would be marketable for wood, ought to be kept track of separately, and some allowance made this plant for refuse, of course after deducting the expense of handling it.

If the above plan was carried out one could readily see

what each product was actually costing the manufacturer, and of course to these costs it would be necessary to add each year a certain percentage for depreciation on the different plants.

I have not any methods to give you as I do not think one could be given satisfactorily without knowing the nature of the plant. It has been my experience that these accounts can be kept separately with a little care, and proper methods used.

Charge Only Labor and Expense

Another Quebec manufacturer says:—In our case, we only charge up the labor and expenses that go toward handling of logs and sawing them into lumber. As for any planing, we consider this an extra part of the business and increases our value for lumber that much more, and the cost can be more than taken care of, in increased prices we get for the stock. This also applies to laths; we figure our laths cost us so much a thousand and this is deducted when figuring on profits.

Regarding the system of finding the cost of sawmill operations, a Georgian Bay firm reply:—We think the system followed by your inquirer is the correct one, and that all the cost of putting by-products on the market should be charged against such material. We, however, do not pretend to keep any correct system of cost for our saw mill operations. We have only two by-products in our mill, one—wood that we sell to the public as fuel, and the other material consisting of waste, that is usable, in pine or hardwood for buttons and covers of the various articles we manufacture. We

think our own method of keeping track of such, would not be of interest to the other party, who would not be using the waste material in the same way as we do.

Keeps Record of Each Material Separate

The general-manager of a progressive Northwestern Ontario company gives his views on this important question as follows:—We have read with interest before the inquiry regarding the cost of lumber and of by-products. Here we endeavor as much as possible to keep the cost of each kind of material separate—that is all of the lumber goes into one cost and the by-products into another. In figuring the costs of the by-products we realize they are not entirely accurate as they do not take into consideration overhead or cost of power furnished, as with us the power is a small item and the overhead would be a small item to figure also; so that is all charged to manufacturing of lumber, except, of course, at the planing mill. There we have separate power plants and the cost of manufacturing in that department is kept entirely separate from the cost of the lumber. In our opinion the cost of the by-products should be kept separate. Often we think by-products are handled at a loss and would continue to be handled at a loss if one did not keep accurate cost of the expense of manufacturing and handling them.

We are enclosing a statement showing just what we charge to the manufacturing of lumber and to the by-products.

For the Cost of Lumber

To arrive at the total cost for manufacturing lumber, we charge up the following:

Plant Roadways—Other than lumber haulways.			Loss or Gain

yard foundations, labor and material depreciation on plant proper exclusive of planing mill or any property connected with shipping.

For Cost of By-Products

Lath:

We charge the following:—
Labor and supplies including oil and waste.
Labor for hauling and piling.

Wood:

We charge the following:—
Labor cutting, picking out, hauling and piling.
Planing mill cost is considered shipping cost and should not be added to cost of lumber in pile.

The Cost Price for Each Sub-Division

"We have been operating a sawmill, a planing mill, lath mill, box boards, plug-making, refuse grinding, slab selling, etc., and each of these by-products has its proper cost place kept separately. We have found this way of keeping an accurate accounting system very satisfactory," says an official of a large lumber company doing business in Central Quebec.

Continuing, the company says:—In our opinion, the proper and right way of cost accounting for lumber and its by-products is to figure each item with its proper salaries of operation and maintenance, material for same, fixed charges, auxiliary charges, administration, power, etc., in order to arrive at the exact cost price for each sub-division.

The saw mill and piling of sawn lumber (rough) are one operation. Planing mill, shingles and laths manufacturing, box plant, are separate operations for which it is

necessary to have a separate cost price with all charges appertaining to these accounts just as for the saw mill operations, and this, although these various sub-divisions are the fact of being by-products from the saw mill.

We do not see why the rough lumber should be charged with operation charges of its by-products which simply means a burden to the rough lumber and increases its cost price, without any practical results.

By-products Should Stand on Own Feet

An Ottawa Valley firm remark: While we believe that the sawing should bear the major part of overhead expenses still we are of the opinion that the by-products such as lath, pickets, box boards, etc., should stand on their own feet and should be charged with all expenses in connection with their manufacture. We figure our costs not by the month but by the four week period or covering two fortnightly pay periods.

We have daily reports taken at the sorting table of lumber sent to the yard and enter these in detail in a special book of record for this purpose, thus approximate total cut to the evening of the day previous is always available for reference of the different sizes and grades.

Besides the actual wages chargeable direct to sawing, sorting piling, shipping, etc., we estimate what is a fair percentage of such charges as office, general, river work, blacksmith shop, stable, power, oiling, millwrights, filing room, etc., is chargeable to each one of the main divisions

and, on this proportion at the end of each four week period it is so charged. This gives a fair approximation of the actual cost without overhead; such as superintendence, selling, insurance, etc. Lath, pickets, box boards and wood are also figured in the same manner.

How to Get at the Cost of Lumber

The accountant of an Ontario firm writes:—This is an attempt to answer "Enquirer" by describing how we arrive at the cost of lumber, and by inference our answer becomes a question for others to answer. All will agree it is a problem worthy of our best endeavors.

To arrive at the cost of any article it is first of all necessary to departmentalize the plant, and keep a record of costs by operations. We divide our costs under the following general heads, 1, logging; 2, sawing; 3, piling and shipping. Under these three divisions we have several subdivisions. In fact the subdivisions are only limited by the manager's desire for detailed costs.

Department A. Logging Operations

1. All Government charges, such as, stumpage, ground rent, fire protection, dues, etc.
 2. Interest on money originally invested in standing timber, if any of it is borrowed money. The carrying charges.
 3. Interest on working capital, if any of it is borrowed money.
 4. General salaries and expenses applicable to this department.
 5. Construction and maintenance of camps, roads, dams, slides, etc.
- Note. If a camp will be used for two years operations, we charge half the construction to the first year and carry over the other half to be charged to the cost of operation for the second year.
6. Wages, horse hire, camp supplies, etc.
 7. Equipment, to the original cost of this asset is added each year the purchase during the year. At the end of the year an appraisal is made of the equipment on hand, the value of this is credited to this year's operations and carried forward as a charge to the next year's operations.
 8. Driving or floating the logs to where they may be reached by the lake tugs, wages, tools, supplies, etc.
 9. Towing, tugs towing logs in rafts to the mill pond and spilling them into the booms at the mill, picking up stray logs.
 10. Proportion of original cost of the standing timber, cost of limit.
 11. General camp supervision, salaries of the superintendent and his staff.

The total of these accounts should give us the total laid down cost of the logs; that is, the cost of raw material f.o.b. the mill. From this we can find the cost per log, and the cost per foot in the log.

Charging Up the Raw Material

Now we come to the real problem, the cost of lumber, or as we prefer to think of it, the cost of lumber, lath, pickets, shingles, each as a unit having its own cost. No difficulty of a serious nature enters into the problem as far as costs of operations are concerned. There is, however, a question as to how we will charge up the cost of raw material. Can any person tell how many feet of lumber, or pieces of lath or pickets, or thousands of shingles a given number of logs, say a raft of 45,000 logs, will produce? If he can our problem is easy. We have yet to find the man who will even attempt this. The raft contains logs of all sizes and qualities, white pine, red pine, hemlock, spruce, cedar and ash, good, bad and indifferent. Then there is no knowing how many may have been lost in the towing. Hence, we charge all raw material to cost of lumber.

Now we enter upon the operation or operations of sawing. This we divide or rather subdivide, according to products. Therefore we have the lumber mill, the lath mill, the picket mill, the shingle mill, and perhaps we might even

say the wood mill. Each of these is a unit, can be and is operated as such. The only factor in cost common to all is power, but each mill is charged with the power it consumes as determined by the engineer and the millwright. So we figure that each mill must stand on its own basis, pay its own operating expenses and receive the credit for its own product. Now we have the following accounts for the saw mill, or rather lumber mill.

Department B. Sawing Operations

Subdivided into.—B 1, sawing lumber; B 2, sawing lath; B 3, sawing pickets; B 4, sawing shingles. Under each of these four subdivisions we have the following account:—

B 1 Sawing Lumber

Account No.

1. Repairs and replacements, including winter overhauling.
2. Depreciation on buildings and machinery (a percentage of the total).
3. Insurance on the buildings and machinery (its proportion).
4. Mill supplies.
5. Wages of lumber mill.
6. Wages in yard, piling and shipping lumber. A reserve is set up and credited to shipping to take care of this expense when it occurs.
7. Salaries of mill wright, estimators and inspectors (the proportion applicable to this department).
8. General salaries and expenses (a percentage of the total).
9. Financial expense, such as interest on loans and bank charges.
10. Trade discounts.
11. Insurance on lumber while in storage.
12. Raw material.—Total of Department A. Logging Operations.

Grand total of all these accounts gives us the cost of manufacturing lumber.

Getting at Basis of Other Products

You will note that we have not taken into cost of lumber the cost of lath, pickets or shingles; so we are at least saved the necessity of deducting these costs. Now to get the cost of each of the other products of the log. This is done by keeping the same set of accounts for each of the other mills,

with this exception, that there is no charge for raw material, hence no account number 12.

The wages and cost of carting and piling wood is charged to Wood Account. The net profits from sale of wood might be credited to lumber, but we prefer to credit this to the lath and picket mills as they really produce the wood. The foreman in these mills knowing that they get credit for all the short wood and slabs and edgings they can produce, see to it that as little as possible goes as waste to the burner. In most mills too much good wood goes to the burner.

"Enquirer" refers to a box factory and planing mill, from our system of departments as treated in this article, it will hardly be necessary to say that we would not consider their operation as a factor in costs of lumber. If lumber is milled or dressed that operation pays no part in the cost of lumber, and should be invoiced to the purchaser as a separate charge.

Dividing the Lumber Into Two Classes

So far so good. We know how much per thousand feet it costs to make lumber. Here is another problem. Supposing it costs \$10.00 per thousand for sawing the lumber, that is, before the cost of raw material is added. I suppose it will be granted that it costs as much to produce a 1000 feet of dead culls as it does to produce 1000 feet of select mill run lumber. Can we then sell the inferior grades at a profit, if we assess them with the cost to manufacture? With out going into this discussion I would lay down this basis of grading and fixing costs of lumber.

Divide the whole lumber out-put of the logs into two well defined classes of lumber, first, mill run and better, second, all inferior grades. As there is little demand for the latter, and every lumberman aims to produce only mill run and better, it is fair to treat the inferior grades as a by-product. Fix the whole cost of lumber on the better grades, ascertain what the inferior lumber may be sold for, and credit this to the cost of the better grades.

Let us leave this solution to the readers of the "Canada Lumberman," but with this parallel case to think over. A farmer sows a good grade of wheat. He reaps and garners no less than four grades of wheat. How is he going to arrive at the cost of producing a given quantity of each grade. That is a cost on which he can accurately base a selling price so that he can make a reasonable profit on each grade?

Standard Sizes Between East and West

—By Charles J. Brooks—

I was in an Ontario retail dealer's yard a few days ago, when a customer called for a strong piece of 2 x 8—12'. The yard man showed him a pile of B. C. fir sized to western standard, explaining that fir was the strongest material he had around the place.

"Looks pretty thin," observed the customer, "Let me see your rule." Measurement developed the interesting fact that the piece only stood up full 1½", and the prospective buyer looked sceptical and unconvinced when told that, even with the scant thickness, fir was stronger than hemlock or spruce of full size. He decided that he would rather have hemlock, on the ground that, admitting the contention in the matter of strength, he did not see why he should pay for 2" material and get only 1½". This incident is by no means unique, but is used as leading naturally to a discussion of Standard sizes as between East and West.

Making Concessions as to Quantity

The viewpoint of the ultimate consumer is an important matter to the retailer, and inspires, to a very large extent, the decided antagonism experienced in some sections of the country against the Western Standard Dimension sizes. Theoretically 2" lumber should measure 2", and a great many of us know from actual experience with the old hand plane, that lumber can be dressed—and used to be dressed in the good old days—without materially reducing its thickness. We are very human and we want to get what we pay for. But we have to remember, conservative though we may be by nature and inclination, that the past is gone taking with it the day of whip-sawn and hand-planed lumber; and that in order to get the quantity production which present day conditions necessitate, we have to make some concessions.

In the case of the Eastern manufacturer, these concessions by the consuming public have eventuated in the adoption for dimension lumber of 1¾" as the finished dressed thickness, which shall be the irreducible minimum. To the man unversed in the technicalities of lumber manufacturing, this can be reasonably explained. A saw-mill is, at best, a rough and ready institution. The speed with which operations must be carried out in order to make a profit on production, makes it inevitable that there will be slight variations in sawing; and ¼" on 2" lumber is well sacrificed to attain the blessings of uniform size and smooth surface. So the position of custom becomes consolidated.

Why the Deduction of Another Eighth

Perhaps the least understandable thing, in this connection, to the man in the East, who has made his adjustment with the mills on the basis of ¼" scant, is why the Pacific coast manufacturer with his immensely larger timber, wants to deduct another ⅛" from the product which he sells as 2" lumber. If, from the comparatively small logs available to the Eastern mills, it is possible to produce material, which when dry, will size to 1¾", why should the West Coast operators offer material sized green to 1⅝" which, when dry, will not measure much over 1½"? It doesn't look reasonable; but there are reasons—one of them being that, even as the 1¾" standard was adopted and sanctified by custom in the East, so the 1⅝" standard was established in the West long before there was any serious thought of attempting to market West Coast Dimension in Eastern Canada.

Not the least important in establishing the Western Standard was the fact that the mills were up against heavy freight rates, even to the Prairie towns, which were their first and their natural markets. This meant that any reduction in weight which could be effected by reducing the thickness of the material without seriously impairing its strength, was rendered inevitable by competition. Then there was the additional consideration that the mills in the States of Washington and Oregon had previously established the 1⅝" standard; and that the mills in British Columbia, when market conditions warranted, were competing with their American neighbors for the trade of the Middle West. Thus—

freight rates, and the fact that custom had already established the Western Standard across the line, were, undoubtedly, the greatest determining factors in bringing about the adoption of that standard by the operators in the Province of British Columbia.

Size of the Timber is Consideration

But, though the influence of these factors was of paramount importance, there remain considerations of a physical nature which cannot be ignored; chief among which is the size of the timber on the West Coast. It requires no great effort of imagination, even on the part of one not familiar with Western mill operations, to understand the effect on machinery, particularly the log carriage and track, of continually handling logs whose weight must be computed in tons.

The average log sawn will probably scale under 1,000 ft. but it is no unusual thing, in the average run of logs for several to go into the mill daily that will scale from 2,000 to 3,000 ft.; and such logs we may figure conservatively will run in weight from three to five tons each. These logs are thrown on the carriage by machinery, with a slam; they are turned, again by machinery, with a jolt; and a continued series of slams and jolts are not conducive to true sawing of lumber. It is, in fact, a matter of surprise that the Western mills, in the absence of shock absorbers on their carriages, turn out lumber as well sawn as they do.

Naturally where Eastern mills, operating in much smaller timber, are up against slight variations in sawing—the Western fellows have more serious trouble in the same way, for it is next to impossible to keep a carriage and track lined up true under the jarring weight of the heavy Coast timber; all of which would seem to justify the ⅛" allowance for straightening out the inequalities of sawing.

Another factor to be considered is the wide range of texture in West Coast fir. Standing by the sawyer in one of the mills, you will see a fir log almost as soft as white pine being sliced up, meeting the saw with a minimum of resistance; but perhaps the very next subject for operation will be a hard-grained, flinty, customer through which the saw will leave a trail like that of a snake through a half-dry mud puddle. And so it goes.

Dressing Dimensions Green From Saw

Still, the man of the East, having digested the foregoing facts and theories may say,—“Admitting all the difficulties in the way of the operator in big fir timber, why can't he dry his stock in the rough and size it when shipping, so that we will get he 1-5/8" thickness, at least?” The difficulty is that fir, like other woods when dry, will produce a very large percentage of degrade in dressing—a much greater percentage, in fact, than spruce or hemlock; and this consideration together with the common necessity of drying and selling his stock as quickly as possible, causes the average operator on the West Coast to dress his dimension lumber green from the saw.

It is readily understandable that the average mill man having his yard stocked with Western Standard dimension, and a market developed therefor, is not very enthusiastic in the matter of manufacturing ¼" scant for the Eastern trade. He has either to duplicate a portion of his stock in this thickness, or to ship green absorbing \$3.00 to \$4.00 per M. in freight on the excess weight. Even if he decided on stocking ¼" scant he has not such plain sailing as, theoretically, he ought to have. ⅛" difference in thickness is nothing in the life of his “heathen” labor. He goes down the yard in the freshness of morning and discovers Yong Kai piling 1⅝" and 1¾" stock promiscuously, his mind wandering somewhere in the home of his ancestors. Rather heatedly he commands Yong Kai's attention somewhat in this wise,—

“—you're piling that ¼" scant with the 1⅝"—”

Whereat Yong Kai mildly observes,—

“Wassamalla? Him inch Fiv eight. Nosabbe quar' scant.”

Hutcheson of Huntsville Has Put That Town On the Map of Northern Ontario

New Sawmill and Hardwood Flooring Factory Were Erected in Record Time and Embrace All That is Modern in Construction, Equipment and Operation—Expansion of the Industry

A hustler in the highlands of Ontario is R. J. Hutcheson, president of the Muskoka Wood Manufacturing Co., Limited, whose headquarters are at Huntsville. On May 29, 1922 the extensive plant of the organization was completely destroyed by fire and on August 17 of the same year, less than three months, a new sawmill had been erected with a larger capacity than the former one, and was in operation. This isolated incident affords some idea of the progressiveness and go-ahead character of Mr. Hutcheson. He is a man who has always kept himself largely in the background and his manufacturing interests in the foreground, and has done much to make Huntsville an industrial centre in addition to its attractiveness as a summer resort.

Mr. Hutcheson is a farmer boy. He was born in Bruce County, about 56 years ago, and, after moving from the farm, his father purchased a small sawmill which he operated successfully until the subject of this reference was 13 years of age. Hutcheson, Sr., then removed to Muskoka and owned a mill on Lake Rosseau for four years. Hutcheson, Jr., who was always fond of the woods and liked fishing and hunting, went along. He attended the public school and afterwards took advanced lessons for one or two winter terms. He loved the smell of pine and hemlock and spent a couple of years in the bush and around the mill at Lake Rosseau doing odd chores and generally picking up first principles in the profession of sawmilling.

The family came to Huntsville in 1885

where a general mercantile business was established by them under the name of Hutcheson & Son. Eight years later fire swept through the town and cleaned out the store. George Hutcheson, the father, then retired

R. J. Hutcheson, Huntsville, Ont.

and a new firm known as Hanna & Hutcheson Bros., was formed. In 1902, R. J. Hutcheson organized and formed the Muskoka Wood Manufacturing Co., the original directors of which were Dr. Hart, Huntsville, president; E. W. B. Snyder, St. Jacobs, Ont., W. E. Hutcheson, Huntsville, W.

Hanna, Port Carling, directors, and R. J. Hutcheson, vice-president and managing-director.

Owned the Fastest Circular Mill

The business flourished from the outset although the original cash capital was not large, being only \$36,500, and no further shares have been sold. A 15-acre site was purchased on the shore of Hunter's Bay, a part of which had originally been the location of the Whaley Lumber Co. A small mill and factory were erected and improvements made from time to time until 1914 the company owned the fastest circular mill in Ontario. Practically all the softwood lumber cut was dressed at the factory and their Red Deer brand hardwood flooring was well and favorably known from Coast to Coast.

In 1915 the three sons of R. J. Hutcheson enlisted, two of them going overseas and shortly after their return in 1920, the balance of the original shares, with the exception of 30, were purchased by the father and the boys. It may be stated incidentally that the shareholders, in addition to getting all these years reasonable dividends, sold out for several times their original investment. R. J. Hutcheson is today president and managing-director of the Muskoka Wood Manufacturing Co., Limited, and his sons, F. W. Hutcheson and H. M. Hutcheson are also officers of the organization, the former being vice-president and sales manager and the latter secretary-treasurer.

The Muskoka Wood Manufacturing Co. is a concern which has always looked to the

General view of the sawmill and yard of the Muskoka Wood Manufacturing Co., Huntsville, Ontario

future and today has sufficient timber to keep its mill occupied for 20 years. In the spring of 1919 the company installed a new Waterous 8 ft. band mill, which was operated during the entire season of 1921 with a total shut-down of only 5½ hours, a record which speaks for itself.

Quick Reconstruction After Fire

As already stated, the plant was destroyed by fire in May 1922, including the offices, stables, blacksmith and machine shop but, fortunately, the lumber owned by the company was saved. By the following August the new sawmill was erected and in operation. The machinery, with the exception of the edger and lath mill, including the boilers

H. M. Hutcheson, Secretary of the Muskoka Wood Manufacturing Co., Huntsville, Ont.

and engine, were made by the Waterous Engine Works Co., Brantford.

The capacity of the sawmill is 50,000 ft. a day and the size of the building is 40 by 134 ft. It is equipped with a double-cutting band mill. The mill was operated night and day until December 18th last when the 1922 stock of logs was cut out. The lath mill has a capacity of 30,000 4-ft. lath per day and was made by the E. Long Manufacturing Co., Orillia, Ont. The edger, which was also turned out by the same firm, is one of their heaviest and latest types. The slash table is of the overhead type and equipped with 9 saws. A remarkable record was made by the new mill in the latter part of 1922 in sawing logs that were uncut at the time of the fire, amounting to more than three

and a half million feet. The plant is at present running 20 hours a day.

The erection of the hardwood flooring factory, the main building of which is 80 by 250 ft. and turns out the widely-known brand of Red Deer hardwood flooring, was begun in October 1922 and was put in operation last February. The flooring factory is equipped throughout with American Wood Working Machinery Co. machines. No. 329 flooring matchers are now at work and it is the intention of the firm to add two more. No. 329 is the latest make, being equipped with feed table and each unit has separate end matchers. The material for the flooring is ripped with an American gang rip saw.

The plant of the company occupies some 17 acres and the office building on Main Street, overlooking the extensive yard, is a four storey brick structure, all of which is occupied by the firm.

In connection with the operations of the Muskoka Wood Manufacturing Co. there is installed in the power house three Waterous tubular boilers, 16 ft. x 66 in. and it is expected that another boiler will be placed in position in the near future.

The Motive Power of the Plant

The factory power is supplied by an Allis-Chalmers generator with a normal capacity of 500 h.p. directly connected to Goldie & McCulloch compound engine. This engine and dynamo weigh 100 tons and will furnish up to 750 h.p. Each machine in the factory is driven by direct-connected motor and the electric equipment was supplied by the Canadian General Electric Co., Limited. The heating and shavings exhaust system, which keeps the premises neat and clean, was supplied by Sheldons, Limited, of Galt, Ont.

The dry kilns are of the progressive type—150 ft. long and three compartments, each 20 ft. wide. They are built of cement and tile-lined, and have a capacity of 350,000 ft. to 400,000 ft. of lumber at one time. The John V. Gray Construction Co., of Toronto, was the builder and it is the intention to increase the kiln capacity in the near future. Sheldons, Limited, of Galt, Ontario supplied the kilns.

The storehouse will hold two million feet of flooring. The flooring is loaded inside the storehouse into railway cars, steel rails being laid the entire length of the building. Hardwood cuttings are conveyed from the factory into a wood chute and can be dropped into railway cars or delivered by wagons to customers around town. All hardwood logs are rafted on cribs to the mill and, in the accompanying picture, the tug of the Muskoka Wood Manufacturing Co.

is seen taking away empty cribs to be re-loaded.

It may be added that Mr. Hutcheson has taken every precaution against fire and, to that end, the most modern safeguards have been installed. The plant is equipped with a Grinnell Automatic Sprinkler System, which was installed by Purdy-Mansell, Limited, of Toronto. The pressure from the waterworks system of Huntsville is 100 pounds to the square inch and this is supplied by an eight and four inch main. There is also installed one, 1,000 gallon Worthington fire pump.

Annual Capacity of Ten Million Feet

It may be stated that the present capa-

F. W. Hutcheson, Vice-president of the Muskoka Wood Manufacturing Co., Huntsville, Ont.

city of the factory is about ten million feet annually of 13/16 hardwood flooring, the firm specializing in birch, which is all grown in Canada, although other lines such as oak, maple, etc., are also manufactured.

The main factory building of the company was erected by day labor. William Hunt, of Huntsville, had the contract for the construction of the big storehouse. All departments of the Muskoka Wood Manufacturing organization are busy at the present time and some two hundred men are given constant employment in the sawmill, yard and flooring plant. The outlook for fall business is bright and the company will carry on extensive camp operations on its limits this winter in preparation for an active season during the year that is ahead.

Building Still Shows Good Increase

During August, construction contracts awarded in Canada, according to MacLean Building Reports, Limited, amounted to \$27,488,700, compared with \$25,187,500 a year ago. Residential building accounted for 31.3% of the August total, and amounted to \$8,630,900. Business building amounted to \$7,762,500, or 28.2%; industrial building \$1,778,500 or 6.5%; public works and utilities, \$9,316,800, or 34%. The value of contemplated new work reported during August amounted to \$32,374,900.

Construction contracts awarded during the first eight months of 1923 amounted to \$223,654,400, compared with \$184,333,700 during the corresponding period of last year. The increase amounts to \$49,320,700, or 26.2%. Residential building during the first eight months shows a falling off of 4% compared with last year, but continues to dominate the various types of construction, with a total of \$68,326,400 for the year to date. Business building shows an increase of 17%, and the industrial group reflects the steadily improving economic situation with an increase of 66% over last year. Public works and utilities have been undertaken in large volume and record a gain of

55% for the period under review, which certainly is gratifying.

Ontario continues to show the greatest activity, and during the first eight months accounted for 50.7% of the Dominion total, compared with 56.3% during the same period of 1922. Quebec has had a very substantial rise in activity, the percentages of the Dominion total being 31.2% compared with 22.8% last year. Construction in the Maritimes has fallen off from 7.9% of the total last year to 2.7% this year. The Prairies and British Columbia remain at approximately the same percentage of the total, viz., 15.4% for 1923, as against 16.7% for 1922.

The trend of the business cycle with regard to the building situation indicates that new construction will continue in considerable volume. There is a great deal of work in prospect and long continued period of prosperity in view for the building industry. Prices and wages are sufficiently stabilized to make it safe for contractors to bid on new work with the assurance that it can be carried through to completion and yield a reasonable profit. The mortgage market is still comfortable enough to permit a good volume of financing. Labor is fully employed at good wages.

Canada is Fast Approaching the Time When Supplies of Raw Wood Will be Difficult to Maintain

By Edward Beck, Montreal
Manager, Canadian Pulp and Paper Association

The pulp and paper industry of Canada, which rests upon the utilization of the country's pulpwood resources, ranks second in point of capital investment among the industries of the Dominion. Its capital amounts to close upon four hundred million dollars. It ranks next to agriculture and the breeding of live stock in its contribution to the external trade of Canada.

The value of its annual exports amounts to more than one hundred millions. It comprises over 100 establishments, scattered throughout the country, principally in Quebec, Ontario and British Columbia. It gives regular employment to some 25,000 operatives, exclusive of woodsmen, who, at certain seasons, number as many more. It pays out in salaries and wages some \$35,000,000 annually and produces commodities valued at over \$150,000,000. Its greatest growth has taken place within a comparatively few years and has been due in part to the waning supply of pulpwood in the United States, which has made it necessary for that country to look to the Dominion for a considerable part of its requirements of pulp and paper. Water-power developments has had much to do with the growth of the industry and other favorable factors have played their part.

It is becoming more and more evident that its future rests upon the degree of scientific management which can be applied to the forests and this, in turn, depends upon the measure of support accorded by the governments responsible for the protection and conservation of the country's resources.

Increasing Consumption of Pulp Wood

Since 1908, which is as far back as reliable records are available, the consumption of pulpwood in Canada has shown a remarkable increase. In 1908 the Canadian mills used 482,777 cords of wood in the manufacture of pulp and paper; in 1920, the consumption of pulpwood amounted to 2,777,422 cords, or almost six times as much. While the dollar value of the wood has not increased at the same ratio, there has been a considerable increase as shown by the fact that the average value per cord in 1908 was \$6.07 while in 1921 it was \$17.55, an increase of approximately 190 per cent.

The year 1920 witnessed the greatest consumption of pulpwood by Canadian mills, amounting to 2,777,422 cords. Consumption in 1921 declined somewhat, owing to the business depression, but when the figures for 1922 become available it will be seen that the consumption was greater last year than in 1920, and will probably exceed 3,000,000 cords.

In the last fifteen years the Canadian mills have consumed approximately 25,000,000 cords of wood. The larger part of this wood was spruce, although of late years the percentage of spruce has not been so high as it was at the beginning of this period. In 1908 spruce formed 87 per cent of the total wood consumed, while balsam formed 12 per cent; in 1921, the last year for which figures are available, spruce accounted for 69 per cent of the total and bal-

sam 25 per cent, hemlock ranking third with about 5 per cent.

In addition to domestic consumption a considerable quantity of wood has been exported during this period. In 1908, 885,409 cords, having an average value of \$5.47 per cord, were exported; in 1922, 1,011,332 cords with an average value of \$10.24 per cord. Total exports of pulp-wood during the past fifteen years amounted to 15,377,000 cords or a yearly average of 1,025,000 cords. Combining domestic consumption with exports we have a total for this period of over 40 million cords, of which our own mills have consumed 62 per cent and our exports were 38 per cent.

How Pulp Wood Exports Grow

It is of interest to note that whereas in 1908 we exported 65 per cent of our cut of pulpwood and consumed only 35 per cent, this ratio gradually changed until in 1921 we exported 33 per cent and consumed 67 per cent. Since in 1922 our exports were smaller and our production of pulp and paper greater than in 1921 the production consumed at home as compared with the volume exported will be found to have increased.

Since 1902 Canadian exports of pulpwood have all gone to the United States. Our exports supply about 20 per cent of the total pulpwood used in that country. This, however, does not represent our entire contribution to their pulp and paper supply as that country also takes about 90 per cent of our pulp and paper exports, which have also increased very considerably in the past few years.

Expansion of Great Industry

Canada's increasing consumption of pulpwood is, of course, reflected in the large

increase in the manufacture of pulp and paper which has taken place in the last fifteen years. The annual report of the Forestry Branch showed 40 mills producing pulp in Canada in 1908; in 1921 the report shows 67 mills engaged in the manufacture of pulp. In the earlier year the total quantity of pulp produced was 306,738 tons valued at \$2,931,653, in 1920 the total production amounted to 1,960,102 tons valued at \$141,553,000.

In volume of production mechanical pulp with about 1,500,000 tons per annum leads. Production of this grade of pulp increased from 325,609 tons in 1908 to 1,090,114 tons in 1920. Of the total production in 1920, 703,000 tons were made for use in the domestic mills and 304,000 tons were exported. Since 1908 Canada has exported 3,929,000 tons of mechanical pulp, of which 2,764,000 tons have gone to the United States and 935,000 tons to the United Kingdom. Of the total production of 1,090,014 tons in 1920, 558,000 tons, or over one-half, were produced in the Province of Quebec and 394,000 tons in Ontario.

The total production of chemical pulp in 1909 was 120,000 tons of which 115,000 tons was sulphite pulp. In 1920, production of chemical pulp amounted to 848,528 tons, of which 654,273 tons was sulphite and the remainder sulphate, with the exception of 5,800 tons soda pulp. Previous to 1909 no pulp was produced in British Columbia but in that year the province manufactured 644 tons, all sulphite with the exception of 44 tons of soda pulp. In 1920 British Columbia produced 108,774 tons of mechanical pulp, 92,466 tons of sulphite and 17,242 tons of sulphate; a total of 218,482 tons.

The total production of chemical pulp in 1920 was 848,528 tons, of which Quebec produced 400,355 tons; Ontario 256,317 tons and British Columbia 109,708 tons.

The Export of Chemical Pulp

Canadian exports of chemical pulp have risen from 40,687 tons in 1908 to 507,827 tons in 1922. Of the total production we export about 60 per cent, most of which goes to the United States with smaller quantities to England, France and Japan. During 1922 Canadian exports of chemical pulp amounted to 507,827 tons at \$31,567,044 divided as follows: bleached sulphite, 151,048 tons valued at \$12,112,408; unbleached sulphite 208,445 tons valued at \$10,377,746 and sulphate 148,335 tons valued at \$9,166,818.

According to the latest census report the Canadian mills in 1921 had an annual capacity of 1,320,344 tons, dry weight; mechanical pulp and of 1,039,866 tons of chemical pulp. While the figures given indicate that the largest cut of pulpwood in any one year has not greatly exceeded four million cords, the probabilities are that the current year will witness a cut somewhat in excess of five millions. New mills which have come into operation or are in progress of building, will materially increase the domestic demand. Exports are also increasing. From January to June, inclusive, this year Canada exported 731,162 cords of pulpwood as compared with 462,196 cords during the corres-

Edward Beck, Montreal

ponding period last year, an increase of 58 per cent over 1922. The indications point to a still greater rate of increase during the remainder of the year. It is safe to assume that the annual drain upon Canada's pulpwood resources will amount to not less than 5,000,000 cords a year as long as that amount of wood is available.

How Much Further Can We Go

The question arises as to how much farther Canada can go in the development of the pulp and paper industry with reasonable assurance of being able to find the required raw material for its maintenance and without jeopardizing the enormous amount of capital already invested. This brings up the subject of Canada's pulpwood supply, concerning which there are as many and as varied opinions as there are authorities. Some official statistics have already been placed before the Conference. Unofficial estimates vary. Some of them say there is enough pulpwood in Canada to last all reasonable requirements for centuries; others that, even should there be no increase in the present rate on consumption there is not enough maturing pulpwood to serve the existing industries for more than a comparatively short period and that if fire and insects are allowed to continue their destructive work the life of the existing supply will be shortened still more.

It is unfortunate that there is not available any authentic and complete inventory of Canada's pulpwood supply, and that most of the estimates that are available cannot be regarded as altogether reliable or up to date. One of Canada's first necessities in dealing with the pulpwood problem would seem to be the securing of reliable data as to the standing supply of wood.

Some Figures Regarding the Future

In 1919, Mr. F. J. Campbell, then president of the Canadian Pulp & Paper Association, in an address before the Canadian Forestry Association, after a study of available statistics, stated that 15 years previously the life expectancy of the pulpwood areas of Quebec, according to the best authority then available, had been placed at 334 years. By the simple method of deducting the known consumption of wood in the meantime, Mr. Campbell showed that the life expectancy had been reduced by 1919 to 95 years, and he indicated that by 1928, or 24 years from the time of the original calculation, the expectancy of supply would have dwindled to 45 years. His figures allowed nothing for losses from extraneous causes and took only the actual increase in consumption as a basis.

"In the year 1890, the value of the output of the pulp and paper industry in Canada," he illustrated, "was \$3,633,257; in the year 1915 this output had grown to \$40,348,021. In 25 years it had become eleven times greater than it was. The figures mentioned regarding our wood supply allow for an increased consumption that in 24 years, or in the year 1928, only nine years ahead, will be $5\frac{1}{2}$ times greater than in 1904, but it is evident that at the prevailing rate of development, the consumption will be at least ten times greater than in 1904, or $5\frac{1}{2}$ million cords per annum. At that rate the remaining supply would be about 121 million cords, or, without allowing for further increase, sufficient for only 22 years more.

Constantly Accelerating Consumption Rate

"We cannot get away from the constantly accelerating rate of consumption and as our supply, whatever it may be, is not

at present increasing, the need of conservation and reforestation is daily becoming more urgent."

The significance of Mr. Campbell's statement lies in the fact that whereas he figured that by reaching an annual rate of cutting of $5\frac{1}{2}$ million cords by 1928, Quebec's available pulpwood would be reduced to 22 years' supply, instead of the 334 years' estimate made in 1904, we have already, as previously pointed out, practically reached that annual cut in 1923, or five years ahead of the time calculated by Mr. Campbell.

Mr. George Cahoon, Jr., another former president, in a bulletin issued by the Association in 1920, emphasized the rapidly dwindling supply of pulpwood, its rising cost and the vital necessity of taking adequate steps for its replenishment.

"The pulp and paper companies have foreseen the difficulty which confronts them in the waning supply and the increased cost of logging and transportation, and have given much study to its solution," he said. "This great industry has organized and perfected a system of fire protection and has obtained from the government the enactment of better laws for the protection of the forests. It has proposed legislation for reforestation and is urging the government to pass it. It has spent money for experimental work, so that there would be a sound basis of facts on which to lay down rules for forest management and on which to base a wise forest policy. Experimental plantations have been made to determine the best species to plant and the proper soils on which to plant them.

Government Must Manage Forests

"This whole question of managing the forests for a sustained yield and for the good of the country at large cannot, however, be left to private or corporator effort. Since the forests actually belong to the Dominion and Provincial Governments, it is their plain duty to manage them properly. Then, too, the long term investment required, the length of time necessary to raise a crop of trees, the low rate of interest which must be charged against the principal invested, must be undertaken by the only certain long-lived agency capable of such work—the Government. In all the provinces a large part of the general expenses of Government are taken out of revenues, and in no instance is a reasonable or properly adequate sum being used in the upkeep and perpetuation of the property. Our legislatures and administrators are beginning to realize the situation, and much progress has been made in the past five years. There is much need of further progress and in this work, both the governments and the public can be assured of the broad-minded and public-spirited attitude of the pulp and paper industry and can be assured that it will co-operate in every way to develop forest policy which will place Canada on a firm and solid basis as the greatest pulp and paper producing country in the world."

The Constantly Deminishing Supply

Dr. C. D. Howe, Dean of the Faculty of Forestry of the University of Toronto, is also on record as to the probable duration of Canada's pulpwood supply. He says:

"Estimates have been made which extend all the way from 15 years to 1,000 years. About 30 years ago a prominent lumberman predicted that the timber supply of Eastern Canada would not last 25 years—and we still have some timber left. Yet his prediction came true. Using the standard

of his time he was right. In those days they were cutting trees two feet in diameter. It apparently did not occur to him that the use of smaller trees would become profitable. If we were today dependent upon trees two feet in diameter for our timber or pulpwood supplies we would be facing a famine. Except in protected places, softwood trees of that size are gone from the forests—and they never will return. There are very few areas of commercial timberlands in the St. Lawrence drainage basin and in the Maritime Provinces that have not been cut over at least once—most of them several times and some of them five or six times in the past 60 years, and each time smaller trees and more inferior material were taken. Rising prices of lumber made this possible. The higher the price of lumber, the closer the utilization of the forest. Trees too small to be utilized today and in all probability, will be used 10 or 20 years from now. Estimates as to the continuance of the spruce pulpwood supply are usually based on trees 12 inches or more in diameter, for this is the diameter limit below which spruce trees may not be legally cut in Quebec, where the pulp and paper industry is centred. Personally, I believe that the supply of spruce trees of that class will not last very much longer at the present rate of increase in pulpwood production in eastern Canada. In fact, the diminishing of the supply has already begun.

Pressing New Woods into Service

"Woods not now extensively used may be pressed into service, such as poplar and birch. Enormous quantities of these species as yet practically untouched are to be found in Eastern Canada. The making of pulp from poplar requires a different process from that of birch and each in turn a different process from that of spruce. So if the hardwoods were used instead of spruce, the pulp mills would have to be reorganized, new machinery installed and new processes established. This would be expensive, but it would be done if necessary—and the consumer of pulp products would pay the cost.

"The other alternative before the pulp companies when the supply of 12-inch spruce gives out, would be to move northward into the Hudson Bay region and utilize the small undersized spruce to be found in the north country where thousands of square miles are covered with spruce from 4 to 8 inches in diameter. It has attained full growth; it will never be any larger and might as well be cut. As you know, the northward migration of pulp and paper mills has already begun. I believe it will continue. I believe the next generation will see the centre of the spruce pulpwood industry on Hudson Bay waters instead of on St. Lawrence waters. The manufacturing costs will be high, the transportation charges will be heavy—and the consumer will foot the bills."

Public Interest is Being Aroused

These views are typical of all those in Canada best qualified to deal with the subject. They all agree on the premise that so far as Eastern Canada is concerned we are rapidly approaching the time, when the industries which owe their existence to coniferous woods, will experience great difficulty in maintaining their supply of raw material. The hopeful thing about the situation is that public opinion is being surely and certainly aroused in behalf of scientific methods of dealing with the remaining forests and that the governments, both federal and provincial, are actively interesting themselves in bringing about an improved condition.

Comfortable houses erected for married employees and large commodious sleep camp recently completed at Dalton Mills, Ont.

New Sleep House with Reading and Writing Rooms and Barber Shop for Mill Help

Construction of Large Dormitory at Dalton, Ont. Marks Advancement in Comfort and Convenience for Employees—Austin & Nicholson Have Also Erected Several New Houses for Married Men and Built Cable Bridge Across Narrows—Considerable Addition to the Plant

This is an age of progress, not only in sawmill installations, labor saving methods and distribution but also in the equipment and convenience of camps, sleeping houses and domiciles for those engaged in lumbering activities. Among the firms, who have kept to the forefront in all matters of advancement are Austin & Nicholson, Limited, of Chapleau, Ont., who have mills at Dalton Nicholson and Devon, in the Algoma district. Considerable new equipment was added recently to the mill at Dalton and several houses have been built in the village for married employees. Among the constructions was a 100-roomed sleeping or lodging house with barber shop and reading rooms and a double deck steel bed unit in every bedroom. This demonstrates that Austin & Nicholson have the comfort of their employees at heart and are doing all that is possible to give tangible expression to their ideas and ideals.

The firm, as already stated, are constantly enlarging their facilities for efficient production which has been rendered necessary in these days of keen competition and diminishing supplies of raw material. At the Dalton mill the new equipment consists of a burner, 30 ft. x 70 ft., a tie edger, of double special design, supplied by the E. Long Mfg. Co., of Orillia, Ont., an alligator named "Alice," from West, Peachey & Sons, Simcoe, Ont., while an extra slab slasher has been placed behind the tie edger.

Reverting to the new sleephouse or camp, with its splendid equipment, it may be stated that the layout of the building is U shape, comprising a front wing and two side wings with a ground area of 90 ft. x 100 ft. Each of the side wings is 30 ft. wide, leaving a space of 30 ft. between the wings and giving plenty of light to the rooms facing the court between wings. Each wing has a central corridor 7 ft. wide.

Interior Arrangement is Admirable

There are two entrances in front of the building, each opening into a large lobby or rotunda which is fitted up with seats and forms a smoking or rest room. These rotundas are one, practically speaking, only that two writing rooms, each 8 ft. x 10 ft., have been built off the middle in front. The wash room 10 x 30 ft. adjoins that part facing the court between the wings. This leaves an actual lobby of 28 ft. x 79 ft. less 460 ft. of floor space which is taken up by the aforementioned rooms. The lavatory is supplied with running water pumped from a pump house to a storage tank built in the court in front of the apartment.

There are 44 bedrooms on the ground floor, each being 7 ft. 4 in. x 10 ft. 6 in. There is a window to each room and a fanlight over every door, affording plenty of ventilation. Access to the upper floor is gained by two stairways, one to each wing, these leading out of the

lobbies downstairs. There are 56 bedrooms upstairs, of the same size and fitted up in the same manner as those below. The equipment of each bedroom consists of one, two-deck unit, steel camp bed with spring and mattress and necessary bedclothes, a table and bench. No washing is permitted in the bedrooms. The construction of the entire building is of lumber, the whole of the interior being finished in V-joint pine.

The village consists of 36 residences, one tie inspector's residence and office, the new sleep camp, the cookery to feed 200 men, store, school etc. The houses are of two classes, the 4-roomed cottage and the storey-and-half house containing six rooms. These are all finished off with V-joint and make a most comfortable dwelling, being nicely located and looking out over the lake. The ten new residences erected this summer face the sleep camp, the intervening ground having been converted into a baseball diamond.

New Cable Bridge Across Narrows

Another feature carried out at Dalton last summer was the cable bridge across the narrows of the lake with a span of 150 ft. First, two large heavy concrete piers were constructed, one on each side of the narrows, and as they were built, 2-in. pipes were inserted in the concrete at the right angle to draw the cables; then at the water's edge a heavy timber bent 10 ft. in height, was built each side. The cables, (six in number) were next placed in position over the bents. Attached to the ends of each cable is a heavy steel rod threaded at one end and placed through the pipes in the piers; then the rods were tightened up and the proper tension placed on the cables. On the three quarter inch cables were placed 4 in. x 4 in. stringers, 8 ft. in length, spaced equally apart on these stringers the deck was laid. The cable bridge is a great improvement as previously the employees had to cross the narrows on planks placed on the boom.

The accompanying pictures afford some idea of the splendid sleep camp and type of houses erected at Dalton Mills by Austin & Nicholson, and also indicate the extent of the activities of the firm at this point. There is noticed a view of the new Kipawa dam, which was built last winter and cost about \$10,000. This dam holds back the waters on the Shikwampa Lake for a distance of six miles. It will be observed in the picture showing the sorting shed of the mill that the lumber is handled from the sorting table in an expeditious manner. The table is built high enough for the tracks and cars to pass under. This enables the cars to be placed and loaded at one end and then pushed out and loaded at the other end. In the left-hand corner of the illustration is seen a subway track which passes under the table and on into the lath mill. The tracks are standard gauge and standard 36 foot cars are used.

New storage dam, busy sawmill and large sorting shed of Austin & Nicholson at Dalton Mills, Ontario

A Bungalow that is Different

Bungalows are usually thought of as small and often built more for looks than for every-day use, but not so in this attractively different bungalow and practical home. Constructed even in a city residential district where beautiful homes are numerous, it would have a distinct individuality of real grace in line and design.

Though a bungalow plan, this one takes the liberty of lifting a good portion of its rear roof and thus making itself into a regular full-grown house of really seven large rooms, including the sleeping porch, and, a wealth of storage space, linen presses and closets.

A study of the floor plans will indicate that this home should be adequate for a large family, and withal it remains a bungalow. The architects are Olsen & Urbain, of Chicago. The plans call for a complete hollow tile structure, with an exterior finish (according to specifications) of Portland white cement stucco and brick. This home also would look well with tile walls exposed or with walls faced entirely with brick.

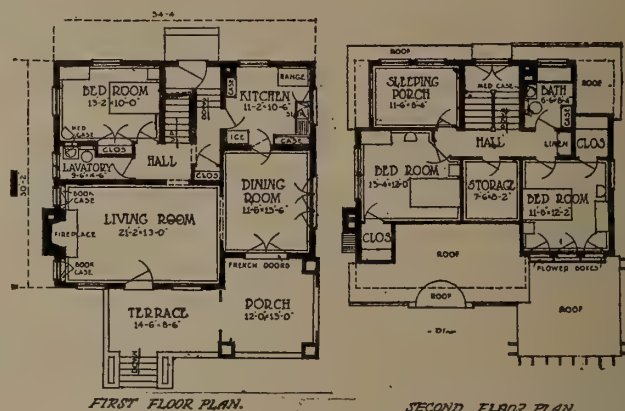

With a cubical content of 280,700 cubic feet, it is estimated by the Home Owners' Service Institute that this bungalow can be built to-day at a cost of between \$11,000 and \$14,000. Locality, exact type of construction decided upon, fixtures and equipment selected, heating system, roof surface and the like determine exact costs of home building to-day, and these decisions, with consequent cost, always are up to the owner.

One of the exterior features of this home is the large porch which lengthens itself out into a terrace when it emerges from beneath the pergola roof. The front entrance leading directly into the living-room from the terrace is convenient. If desired, a vestibule entrance could be added. Good-looking seats, jardinières and plant boxes will add to the homey entrance effect, as shown on the accompanying architectural sketch.

The downstairs bedroom is a floor plan feature. It would remove a climb from first to second floor for one member of the family, or could be used as a maids' room. The ground floor plan shows living room, dining room, kitchen, bedroom and lavatory. The second floor has two bedrooms, a sleeping porch, storage room, clothes closets, linen space, and tiled bathroom.

Somehow, a home doesn't seem quite a home without a real fireplace. Here the fireplace is trimmed with brick and is built along the living room outer wall. Bookcases flank it on either side, and above it are two windows providing just the right reading light.

Cased openings between the living and dining rooms are becoming more and more popular again, principally for the splendid effect of spaciousness produced, to say nothing of the added light and perfect ventilation thus obtained. The kitchen, as planned in this home will be a constant delight to the thorough and efficient housewife. She will revel in the wall cases, which replace the pantry and which certainly are easier of access and more readily kept in order than a pantry, in which anything and everything is hastily set down, to be put in place later. In these cases, there is a place for

everything and everything is quite naturally put in its place. And at the same time when the help problem is such a serious one, the saving of steps and having the table service handy to the dining room are big items. Because of improved and scientific methods of refrigeration, it is now necessary to have the ice box accessible from the back porch. It may be placed wherever most convenient, which generally is near the dining room.

Here we find the ice box handy even for the ice man, by way of the rear hallway, handy to the dining room, and far enough away from the cook stove so that the heat of the stove will not reach it. In short, the kitchen arrangement is scientifically correct.

And because this home is built entirely of hollow tile—outer walls, interior walls and floors, it is fireproof with the exception of doors and windows; and weather proof, for hollow tile provides perfect insulation against heat and against cold and dampness.

Complete plans and specifications by the architects are available at low cost through the Home Owners' Service Institute, 37 West Thirty-Ninth Street, New York City.

Outline of Specifications

Masonry—Footings and foundation walls of concrete. Basement floor of 2-inch concrete, with $\frac{3}{4}$ inch of cement finish, all properly damp-proofed.

Hollow tile walls to be laid up according to detail working drawings. Exterior stucco of white Portland cement. If brick veneer is used either selected common brick or face brick is appropriate, with color and band as selected by owner. Chimneys to be of hard burned common brick and similar brick trim for window sills, entrance stairs, brick copings, as indicated on drawings. Terrace and porch or face brick, according to owner's choice. Detailed specifications and blueprint working drawings describe fully. Living room fireplace of face brick, as specified and detailed. Lining of fire brick, with damper and ash dump provided in hearth.

Carpenter Work—All framing timber specified Norway pine of proper size as marked on drawings. Brick walls to be furred to receive lath and plaster. All outside finish of

clear white pine thoroughly seasoned; to be of stock mill work, or in accordance with detail drawings.

Underfloors to be laid under finished first and second floors. Kitchen floor specified white maple; balance of first floor selected red birch, with vestibule and coat room having tile floor. Second floor finished flooring of red birch or comb grain pine at owner's option; bathroom tiled.

Exterior trim of clear white pine for paint of stock design or accurately worked to scale and full size details. Wood mantel to be placed in living room over fireplace. Miscellaneous cabinet work to include kitchen dresser, bookcases and seat, medicine cabinet, etc., all shown on detail drawings. Stock designs will be found equally effective and probably less expensive than special millwork.

Lathing and Plastering—Walls and ceilings above basement to be plastered two coats on wood lath and a smooth white finish. Metal lath walls, 4 feet 6 inches high, should be provided in bath and kitchen for Keene's cement. Metal lath also shall be used for fire and crack prevention as specified.

Roofing—Roof of house to be of red cedar shingles.

Sheet Metal Work—Copper or zinc leaders, gutters, down spouts and flashings are recommended.

Painting—Strictly pure white lead, zinc and linseed oil in proper proportion shall form the basis of all paints unless otherwise specified, all colors to be selected by the owner. White pine to receive three good coats of paint and one coat of flat enamel, color as directed. Finished floors throughout to be stained and filled and given a two-coat finish, the last coat to be rubbed with pumice stone and oil. All outside woodwork to receive three good coats of lead, oil and zinc, of color selected.

Electric Work—Wire for lights, base plugs and switches and all openings as per plans. Equipment to meet approval of the National Fire Protection Association, subject to the local board of inspection.

Plumbing and Gas Fitting—Complete sanitary and rain-water drainage system, with hot and cold water supply; brass piping for the hot water system minimum. Fixtures, as shown on drawings and listed on specifications, to include two compartment laundry trays in basement, bathtub, lavatory, water closet, sink and built-in bathroom accessories. Gas outlet in kitchen and basement, with gas range and laundry stove.

Heating—A warm-air furnace or steam heating system specified, at option of owner.

Re-organization of Niagara District Planned

Retail Lumbermen Will Gather at Welland on September 22 to Formulate New Boundaries and Consider Live Issues—Strong Committee Has the Work in Hand—Trade Ethics Discussed

The Niagara District of retail lumbermen, which was formed three years ago, will be reorganized. The territory is at present rather large and unwieldy; in fact the various districts throughout Ontario may be divided into subsidiary ones of two counties each where local meetings can be held to discuss matters of a purely domestic character. Then there will be larger district gatherings which will be held possibly every three months and questions of more general import discussed. It is expected that the local bodies will prove acceptable aids to the district and the districts will keep alive the work in the larger sphere of activity, with the O.R.L.D.A. as the source of inspiration and centralization.

At a meeting held at St. Catharines recently a committee was appointed to reorganize the Niagara district, and, with this end in view, a representative gathering will be held at the Rita Hotel, Welland, on Saturday September 22nd. Dinner will be served at 1 o'clock, after which there will be a general session of lumbermen and many matters of vital interest will be taken up. Officers will also be elected for the coming year. The present president of the district is S. L. Lambert, of Welland, and the secretary O. W. Rice, of Welland.

Trade Questions up for Discussion

The reorganization committee, which has the matter in hand and was named at St. Catharines, is composed of K. J. Shirton, Dunnville; John Davis, St. Catharines; James Harriman, Niagara Falls, and A. M. Wise, St. Catharines. These men have promised to see that everything is done to arouse greater interest in the work along the lines proposed, and there is no doubt

S. L. Lambert, Welland,
Chairman of Niagara District

that the gathering at Welland on Saturday, September 22nd will be representative and enthusiastic.

At the meeting in St. Catharines when this step was decided upon, several matters were discussed in regard to the outlook for trade. It was stated that the retail business had fallen off considerably in the Niagara district during the past few weeks and that there were several cases of price-cutting. One delegate remarked that three lumbermen had gone to the wall in one of the counties within the past few years through slashing prices. There were a few others who

seemed to think it a mark of ability to get rid of their stock at the lowest possible value and undersell the other fellow.

"In the lumber business to-day," said one member, "wholesale prices on white pine, hemlock, spruce, etc., are about 20 per cent higher than they were last year at this time. The manufacturer's prices have been going up and the retailer has not been able to raise his fingers accordingly. The result is that the most of us are doing business at a less profit than we have in a long period. Now, I don't mind being frank with you and telling you that the retail prices are not as high as they should be, considering the cost of doing business, wages, taxes, insurance, etc., but, honestly, I am afraid to raise quotations. The result is we will not make any money this season although we did pretty well last year. I had no kick coming in 1922. There are still a few price-cutters in our district who think that if they make five or six per cent on their money, they are playing safe. They will however, find out their mistake before very long. They evidently know very little about overhead costs or the costs of unloading, piling, storing, handling and delivering stock. We are selling hemlock to-day at \$48, and it is too low."

Buys Only Best Grades of Hemlock

Another member declared that he was getting \$50 for hemlock and that he had decided to purchase No. 1 exclusively. When mill run or merchantable was frequently offered to him and guaranteed not to contain more than 10 per cent of No. 2, he found that a greater proportion of No. 2 was included in the stock. The result was that a large part of the hemlock was merely suit-

able for culls; in fact he had been forced to sell a lot of this material in one big pile at a bargain sum last year in order to get rid of it.

Most of the others present stated that in their opinion there was no money handling hemlock other than No. 1. Some preferred to pay a dollar or two more and get spruce, or purchase Georgia pine on both of which in quantity lot sales they could make a better profit.

Another matter which came up for discussion was the question of advertising and service. Some declared that they used the "builders' page" in the daily or weekly papers and got good results. Others found that a small advt. in the telephone directory was a ready reference and brought in a number of inquiries, while those, who have adopted the building plan service, inaugurated by the Ontario Retail Lumber Dealers' Association and have sent out colored cards, presenting cuts of attractive homes and stating that they could supply the material for the same, have discovered that this evoked considerable interest.

One delegate stated that a man came into his office the other day, stating that he had received a large contract for concrete work and required some lumber for forms. The outsider started off by stating,—"I understand that your prices are a little higher than Mr. So and So's, whose name has also been furnished to me, but I am told that you give service and that is what we are after at the present time. We desire prompt deliveries as the work we have in hand cannot be held up."

How Service Will Capture Customers

"Now," continued the speaker, "I got that business simply on service although my price was higher than that of the other fellow, and service is the way I like to have my name brought before the public. It means something after all to keep your word and make your deliveries when you say that you will."

One other matter discussed was that of manufacturers or wholesalers selling to contractors in a town or city. This practice has been pretty well eliminated although there are occasional violations on the part of wholesalers, but where these become known, the retail dealers, not only in that town but district, refuse to buy from such firms. It was pointed out that, as a contractor had no expensive yard or mill equipment to maintain and no heavy overhead, he could do business on much less capital investment than a retail yardman. In one or two cities in Western Ontario where wholesalers had sold contractors, the matter has been investigated by the O.R.L.D.A. and the offenders written and now there are few breaches of legitimate transactions. Association work and united effort have done this for the retail lumberman. Mr. H. Boulton, secretary of the O.R.L.D.A., who was present, asked all those who knew of any breaches of trade ethics to report them in order that action might be taken.

The matter of the Mechanics' Lien Act was also discussed, the necessity for prompt collections, living up to all agreements, the cultivation of a closer community spirit and the general benefits of organization. Most of these subjects will be dealt with in greater detail at the reorganization meeting which will be held in Welland on September 22nd, when definite recommendations will be presented regarding the future scope and character of the work.

One lumberman stated that he had never been stuck for material in his own town as he would not make delivery of lumber, lath, shingles, etc., to anyone except to the owner of the property or the man who had the deed for the real estate, and thus he did not have to resort to the Mechanics' Lien Law for protection. Delivering material to other men, contractors, speculative builders, etc., was where many losses were contracted. Most of those present thought that the building material man should have a greater protection than the present law offered and that the time for extending and putting on a lien should be more than thirty days. Another member stated that the fees of lawyers were too high and there was not much satisfaction in putting the lien law in operation as anything secured was swallowed up in costs.

Operation of Mechanics Lien Act

Secretary Boulton explained the workings of the measure, passed at the last session of the Ontario Legislature, which gives a judge wider power to use his discretion in seeing that all parties get just treatment; this, notwithstanding the way in which the contracts may have been worded

O. W. Rice, Welland,
Secretary of Niagara District

and the previously accepted principles of the Act. A judge is now able to exercise a larger measure of common-sense and not be bound down by rigid limitations and can render decision upon the real merits of a case.

It was explained by the Secretary that this was important first, in overcoming obstacles experienced under the old Act in cases where a ridiculously low contract price was agreed upon between the owner and the contractor, thus, under the hold-back, reducing the liability of the owner; second, in overcoming difficulties in connection with an unreasonably high price mentioned in an agreement of sale under which the purchaser is to erect buildings upon the land sold. If the latter went back on his agreement, liens were filed and the lien claimants discovered, under the old Act, that the seller had a prior claim for the unpaid portion of the purchase price. As this figure was absurdly high, all the available money was eaten up and the claimants under liens got little or nothing.

The Responsibility of the Owner

Two sections of the new Act deal especially with the owner's responsibility. Sec-

tion 10 says,—“Save, as here and otherwise provided, the lien shall not attach so as to make the owner liable for a greater sum than the sum payable by the owner to the contractor.” This section was also in the old Act. Section 6, however, has considerable bearing upon Section 10 and it contains important additions and amendments. This section gives the wage earner or material man the right to a lien, and the new portion of the section states that this lien shall be “limited to the sum justly due to the person entitled to the lien and the sum justly owing by the owner.” This portion, with the word “justly” in two different places, is new and the manner in which this word “justly” is expected to be interpreted by the court is clearly indicated by changes which have been made.

One section instructs the judge or officer trying the case as to his duties. It is in much the same language as the corresponding section of the former Act but it contains, Mr. Boulton said, a new clause (a) as follows: “The form of the judgment may be varied by the judge or officer in order to meet the circumstances of the case, so as to afford to any party to the proceedings any right or remedy in the judgment to which he may be entitled.”

Fraudulent Agreements Checked

Continuing Mr. Boulton said that legal advice has been obtained as to the interpretation of these clauses that may be expected after the new Act comes into force. We are told that “Because of the joint operation of Section 33, Sub-section 1, and Section 36, Sub-section 3, the officer trying the case has jurisdiction to deal with a fraudulent agreement and, if it does not express the true consideration, Sub-section 3 of Section 36, allows him to give the necessary relief to a lien holder and declare that the agreement for purchase shall have priority only to the extent of the actual amount justly owing by the owner to the contractor.” Further, legal advice contains the following: “If, in fact, there was a fictitious contract price mentioned in the contract (too low for completing the work) and a lien holder establishes this fact at the trial, the judge or officer can give him a lien upon the full amount justly owing, notwithstanding the wording of the contract.” It will be seen, therefore, that, if our advice is accurate, a fictitiously low contract price will not in future relieve the owner of any liability short of the actual amount justly owing for work done and materials supplied.

In connection with the delivery of material to a job, a change has been made in the wording of the new Act. An amendment that we advocated in 1918, and which was carried, provided that delivery upon a lot adjacent to the job should be a good delivery for the purpose of establishing a lien. The new Act, while continuing this principle, seeks to regulate it to some extent. The words used in the new Act are as follows: “The placing or furnishing of such materials to be used upon the said lands, or such other place in the immediate vicinity of the said land designated by the owner or his agent, shall be good and sufficient delivery for the purpose of this Act.” It will be noted that, in the case of delivery upon land “in the vicinity,” the new Act requires it to be “designated by the owner or his agent.” It will, therefore, be necessary for the material man to have the owner or his agent designate the place of delivery if it is not upon the actual lot on which the building is being erected.

Z. Mageau, Sturgeon Falls, Ont.

Finely Equipped Sawmill at Field

New Plant Erected by Mageau Lumber Co. in the Nipissing District to Replace the Mill Burned Down Last Year, Possesses Many Features of Interest—Rapid and Economical Production and Model Arrangement of Equipment—Cutting Capacity of 60,000 ft. Daily—The Personnel of the Organization

H. O. Tremblay, Field, Ont.

Up in the Nipissing district a new sawmill started operations recently with a cutting capacity of 60,000 feet a day. The plant is that of the Mageau Lumber Co. and the location is at Field where the first mill was built by the firm in 1914 with an output of 16,000 feet daily. This was increased to 22,000 feet two years later and a new mill was built in 1917 with a production of 36,000 feet. Two years later the circular saw was changed to a double cut band which increased the output to 45,000 feet. This mill was burned in October 1922, and reconstruction operations were soon started on the same site.

The main part of the new mill is 36 x 132 feet and the lath mill annex 28 x 44 feet. The engine room is 24 x 28 feet; the boiler room 32 x 42 feet and the sorting sheds 26 x 146 feet. The output of the mill is chiefly white pine with a small percentage of red pine, and the equipment, which was supplied by the E. Long Mfg. Co., of Orillia, consists of a double cut band saw, 8-foot wheel; 40-inch heavy duty carriage; steam set works; heavy duty centre drive gang edger and a lath mill and bolter. Power is supplied from two Frost engines 18 x 20 feet.

"The band mill has been giving the very best of satisfaction since the first day we started operating our new mill and has not required one minute's special attention. We do not think it would be possible to get better service," remarked an officer of the Mageau Lumber Co.

The company has ample yard accommodation and can take care of about 15,000,000 feet on the premises. The firm piles from high cars and has two standard gauge trucks throughout the yard, the cars being hauled to any desired point with horses. Shipments are made by rail only. The Mageau Lumber Co. handle about 1,500,000 feet through their own planing mill each season and operate all their own camps and drive the logs to the mill by water.

The Mageau Lumber Co. own timber limits in the townships of Bastedo, Fell, James and Pardo in the district of Nipissing.

All the output of the mill is disposed of down to No. 3 culls, and as there is no market in the district for slabs or trimmer ends, a large proportion of these is consumed in the burner. The sawdust is burned in the boilers and the refuse in the burner which is 21 feet in diameter. The lath department of the mill has a capacity of about 45,000 pieces a day.

Prices and Production Costs

The company markets all its output principally through wholesalers and states that prices just now are proportionate with the cost of production. Wages, however, have a rising tendency which can only be covered by a higher figure for lumber in order to operate at a profit.

The Mageau Lumber Co., as already stated, operate a planing mill in connection with their plant which is equipped with a matcher, sticker, 4-foot band saw and self-feed rip saw, which were supplied by the A. R. Williams Machinery Co., Toronto. The planing mill is 60 x 72 feet, and the engine and boiler room 20 x 60 feet.

The company report that they have all the labor that they need just now. Wages range from 25 to 75 cents per day more than last year for ordinary labor. Skilled help is continually on the rise and many skilled men seem to prefer working as ordinary laborers unless they get the figure they demand.

The Mageau Lumber Co. operate a general store at Field. From 1914 until 1918 the organization was known as the "Field Lumber Co.," but in the latter year the name was changed to the "Mageau

Lumber Co., Limited," under which title it has remained up till the present.

The head of the concern is Zotique Mageau who is a former Mayor and a prominent resident of Sturgeon Falls, and has for many years occupied a seat in the Ontario Legislature. Mr. Mageau was born in 1865 at St. Julien, Que., and has always been a progressive and public-spirited resident of the north. He has been in the lumber business off and on for the last quarter of a century. Mr. Mageau was re-elected in the Liberal interests in the late Ontario elections.

H. O. Tremblay is the secretary-treasurer of the firm, which position he has occupied since 1916. He was with the late Alex.

The new sawmill of the Mageau Lumber Co.

Lumsden and his successors from 1903 to 1912, and later with the Abitibi Power & Paper Co. until assuming his present position.

D. Thibert is the manager of the woods department and has been with the firm for the last eight years.

J. U. Lamarre is vice-president of the organization and manager of the well-equipped general store which is run in connection with the business.

The Mageau Lumber Co. is a well-managed and enterprising concern which in the last eleven years has rapidly come to the front. Its new mill is splendidly equipped and is laid out with a view to economical operation, rapid production and model arrangement.

The Lumberjack is Always Shifting

At a recent meeting of the International Association of Public Employment Services, held in Toronto, one of the questions discussed was migratory labor. T. A. MacDonald, employment supervisor of the Abitibi Power & Paper Co., Iroquois Falls, touched upon the employment problem in the lumber industry and described the difficulties experienced in retaining help for any length of time in the northern districts of Ontario. The difficulty of providing accommodation for families accounted for the reluctance of married men to stay in the industry, while the unattached men with a wandering penchant were hard to retain for any lengthy period. August was a difficult month to get men, as they were leaving then for the harvest fields. Last year, stated Mr. MacDonald, 2,900 new men were taken on by the company and 2,700 men left. Many of the men who left, however, returned the next year.

How Live Owen Sound Firm Has Branched Out —In Wood Products Activities—

For twenty-seven years Keenan Bros. Limited, of Owen Sound, Ont., have been producing and selling hardwood lumber and today are going stronger than ever with wider interests, increased output and enlarged market. It was in 1896 that James E. Keenan, who had spent some years in the bush, and had a practical acquaintance with the industry, started in a small way in the progressive northern town. He was soon after joined by his brothers and the first undertaking was a water mill of limited capacity which they rented and stocked during the winter of 1896-7. This was run continuously until 1902 when Keenan Bros. acquired the plant of the Goderich Lumber Co. who had bought out the Pickard & Rowan Co. some years previously. This was a circular mill and was removed to and operated as such in Owen Sound until 1912 when Keenan Bros. installed a 12-inch double cut band saw manufactured by the William Hamilton Co., Peterboro, and two years later put in a 10-inch horizontal band resaw manufactured by Clark Bros., Olean, N.Y.

Some time ago Keenan Bros. bought the Rixon-Ainslie plant which they acquired for the land alone and with no intention of removing their own mill. "However," said Mr. Keenan, "we decided later that it was more advantageously situated, being in the centre of the property and that it had docks out in the water, making a good safe place for holding our logs. We decided that it would pay us to spend the necessary money to make the change, abandoning our own mill and using this sawmill site."

John C. Keenan who is associated with his brother, James E., in the various enterprises in Owen Sound, ably looks after the lumber sales of the firm, shipments, etc. His voice is the one heard by the caller on the telephone and his signature appears generally on letters

lands of Grey County to the waters of Georgian Bay, has two rivers, the Sydenham and the Pottawatamie, flowing through it. The former really forms an inner harbor, on either side of which are located the terminals of Canada's two great railway systems, the C.P.R. and the Canadian National.

Keenan Bros. now have about 1,200 feet frontage, both water and rail, with docks for loading by boat, if necessary. Each season the firm cut from 3,000,000 to 4,000,000 feet of hardwood and about 1,500,000 to 3,000,000 feet of pine, spruce and hemlock. Last year Keenan Bros. took out about the usual stock of 3,000,000 feet of hardwood. They operate one camp and sometimes two on the North shore, having been located on McGregor Island since 1912. They have bought other adjoining properties, besides smaller quantities of hardwood scattered throughout the country.

Bringing Hardwood Logs By Barges

The firm also operate the Keenan Towing Co., Limited, with the tug "Keenan" and the barges "McGill" and "Dan Proctor." The latter is a 1,500-ton barge, equipped with hoisting engines to swing booms which are 18 inches in diameter and 76 feet long. These barges are loaded with logs, ties and timber, and will carry sufficient material to produce about 400,000 feet of lumber and can be unloaded in less than ten hours. This method of bringing in logs to the mill has proven to be efficient, safe and economical and has put Owen Sound on the map as a milling centre for hardwood lumber long after the adjacent territory has been stripped.

The pine and softwood logs are floated in the customary way by being enclosed in booms and towed by the tug "Keenan." The

dealing with the lumber end of the business. John C. Keenan is well and widely known in the lumber arena and he is always active in the advancement of its welfare and development.

Plant Overhauled and Improved

The fact that Keenan Bros. can bring hardwood from the North shore to Owen Sound in safety, was one of the main reasons they decided to rebuild their mill, which work was carried out during the past winter. The plant, which was overhauled and put in good shape, is now in operation. Power is supplied by two 6½ x 16-foot boilers and two engines 16 and 20-in. stroke. The machinery consists of a double cut band mill and horizontal resaw, trimmers, edgers, slasher and all the other equipment that is generally found about a modern mill. There are both lath and shingle departments but these are not being used at the present time. In connection with the sawmill, no burners are employed. The sawdust is consumed in the boilers and all other refuse is kept for fuel for the other factories of the firm, or is sold as wood. The capacity of the mill is about 50,000 feet of hardwood each day of ten hours, or 75,000 feet of pine, and the average cutting season is from April till November.

The townsite of Owen Sound, gradually sloping from the high-

company are now bringing hardwood logs from Manitoulin and St. Joe Island, on their boats to the extent of nearly one and one-half million feet.

The "Dan Proctor," is considered the finest wrecking outfit on the great lakes, having since last fall lightered and freed two steamers that got on the rocks around Tobermory. The first one by taking with her clam shells, a few hundred tons of wheat and putting it in her own hold and later when the steamer was released, putting it back on board. Last spring, on account of having nearly a full load herself and time pressing, the boat was released by clamping the coal and dropping it in the lake to the extent necessary to relieve the vessel.

The Keenan Woodenware Mfg. Co., which is an allied industry, manufactures tubs, pails, kegs, baskets, crates, veneer, etc., and last, but not least, tooth picks, and skewers, while the Eureka Refrigerator Co., Limited, another Keenan subsidiary, turns out grocers', butchers' and household refrigerators, butchers' blocks, counters, ice cream cabinets, red cedar chests, etc. The trade mark of the latter is Kaybee, being the initial letters in the firm name of Keenan Bros. In the woodenware factory the firm use all the refuse from their sawmill making baskets or crate bottom stock or heading and bottoms for pails and tubs, while in the refrigerator plant the com-

pany use all the spruce logs they are able to secure in the north. It may be stated that the Keenan Woodenware Mfg. Co. are the only manufacturers of tooth picks in Canada. They are also the sole Canadian producers of natural ice cold storage houses. Keenan Bros. specialize in wood products from the stump to the finished article in the hands of the consumer.

In reference to their output of lumber, Keenan Bros, who are wholesale lumber dealers as well as millmen, cover all Ontario in their operations, and in normal years their sawmill activities are only a minor part of their lumber business.

Develop Demand for Lower Ends

So far as the hardwood market is concerned, Mr. James E. Keenan stated recently that the situation was not any too reassuring as, until a reasonable price could be obtained for the lower grade stock, the higher grades must bear the burden of producing a fair average figure. The firm have found a ready sale for the better ends of all hardwood stocks that they can secure but the discouraging feature has been that buyers do not wish to use the low ends. "The difference between firsts and seconds, and the lower grades" added Mr. Keenan, "is all too marked and we consider that under the best of circumstances of the average run of good logs, not more than 40 per cent of the log is saleable as No. 1 Common and better, and with only an indifferent market for the remaining 60 per cent at any price."

This point was also stressed by Mr. Keenan in an address at the last annual meeting of the Canadian Lumbermen's Association in Montreal. He said the spread in prices between No. 1 Common and better and the low ends is altogether too great and yet the latter had to bear its proportion of the cost of production. In softwoods the manufacturer could sell 99 per cent of his product and knew where he was at in setting the market figure. Conditions in the latter arena were much more stable and the demand steadier, and he believed that softwoods yielded a better average figure. In hardwoods it was impossible to get anything like a fair quotation for the low ends and a market had to be developed for the product.

How Producing Costs Ascend

Mr. Keenan said that Canadians were not going to have in the future any cheap lumber in the better grades as the expense of manufacturing was constantly advancing. Overhead costs, selling, wages, operation, Workmen's Compensation Act, taxes, etc., were all advancing and the producer was not getting the profit today that he should in view of rising costs and the amount of money invested in equipment, yards, limits, etc.

Keenan Bros. are energetic and progressive citizens of Owen Sound who lose no opportunity in boosting their city. They take an active interest in the Board of Trade and other public bodies, and at the Made-in-Owen Sound Manufacturers' Exhibit, the Keenan Woodenware Mfg. Co., and the Eureka Refrigerator Co., made imposing and attractive displays.

Important Practical Pointers on the Better Fire Protection in Yard and Mill

— Prevention — Operation — Organization —

— By C. J. DeFields —

Chief of Fire Department, Windsor, Ont.

Owing to the close relationship that it bears to the vital interests of every community the question of fire protection, fire prevention and the organization of plant fire departments must be handled without gloves. It is not my intention to try and make my views and opinions coincide with the views and opinions of the other fellow. Some fire prevention officials differ as to how far we should go when making suggestions or recommendations along fire prevention lines.

They seem to think that if they ask the proprietor of a plant to spend a little money in making his factory safe that they will scare the fear of fire all out of him. That has not been my experience. When I go into a factory or mill with the intention of suggesting changes that will better the existing conditions, from a prevention standpoint, I go the limit. It is left to the owner or manager to decide whether I am right or not. If he disagrees at the time, which he sometimes does, and eventually finds out that I was right, it is usually too late for conversion to do him any great amount of good.

The suggestions and advice that I have to offer, are not founded upon theory or from a knowledge gained from books but established facts coming under my own observation during a quarter of a century service in fire fighting. After all experience is the best teacher. Coleridge says that experience to most men, is like the stern lights of a ship, it illuminates only the path that has passed. It am afraid that he is right. A great many of us do not seem to profit by it as we should.

Fire Losses Steadily Increase

In spite of the united efforts of the different fire prevention organizations throughout the Dominion (and this applies to America also) the fire loss is increasing daily, and, out of all reason when compared

with the gain in population and commerce. ~~I do not intend to quote any figures on our annual fire loss.~~ It is sufficient to say that the fire tax is the heaviest tax we have to pay and, unless you and every other member of your community do your share of fire prevention work every day in the year, relief is far distant. Do not forget that even if the

Chief C. J. DeFields, Windsor, Ont.

war is over the bill is not paid. Conservation is vital to the life of the nation. Conservation, Fire Prevention and Fire Protection are blood brothers and it is poor business to preach one and fail to recognize the other two.

The more common and frequent causes of fires and large losses in mills and other industrial plants might be classified as follows: construction, heating, lighting, power, outside exposure and the human element. When you start out to reduce the fire hazard in your mill or yard you must give each

cause individual attention and consideration. When you build, build as near fire proof as possible. I feel safe in saying that at least 50% of the fire danger can be eliminated in construction.

All large floor spaces should be subdivided into smaller spaces by fire walls. Fire walls should extend to a distance of, at least, three feet through the roof. All openings should be provided with automatic fire doors. Openings for the admission of shafting, piping or other power transmissions should be made as small as possible. Remember a fire wall with unprotected openings is no longer a fire wall. The power plant should be housed in a separate building and all openings leading to other parts of the plant should be protected with fire doors.

The roof should be constructed of fire proof or slow burning material as a protection against sparks or other outside hazards. A platform should extend the full length of all peaked roofs and water barrels should be placed at intervals of 50 feet, three buckets to each barrel. Keep the roof clean and free from wood dust and in a good state of repair.

Cleanliness is Good Fire Preventer

In plants where steam or hot air is used for heat keep all pipes from contact with wood or other material. Where they pass through floors or walls see that they are protected from contact with wood or other material. Above all, keep all pipes carrying live steam or heat free from dust. A mixture of mill dust and hot steam pipes will very often cause spontaneous combustion. Where electricity is used for power and light all wiring should receive careful attention. Wires should be protected from friction contact with belts, pulleys or any other part of the machinery or building. Inexperienced workmen should never be permitted to tamper with, alter or experiment with elec-

trical equipment and the man in charge of this equipment should be a responsible employe, one who appreciates the dangers arising from overloaded circuits and make-shift fuses. Protect your portable lights with wire cages over lamps and use the best drop cord that money will buy.

The outside exposure hazards are many and should be guarded against at all times. If the fellow next door has a fire hazard on his premises see that he removes it. Place the matter in the hands of the local fire chief who, under the fire marshals act, has almost unlimited powers in matters relating to fire prevention. If you fail to get action in this way take the matter up with the Provincial Fire Marshal and you will get all the attention the case deserves.

Bear in mind that fundamental ground-work of all fire prevention work is cleanliness. The condition of a factory or the surrounding premises is usually typical of the organization that manages it. If you want results in fire prevention work, you must keep clean all the time. Don't remove rubbish once a week; remove it every day and never let it accumulate.

Sprinkling Yards and Piles is Good

Keep the machinery free from the usual accumulation of saw-dust shavings or other waste. An overheated bearing buried in saw-dust shavings is a direct invitation to the Insurance Adjuster, providing there is anything left to adjust. Provide metal safety cans for oil, metal receptacles for the storage of waste or wiping rags and see that all oily rags or waste is destroyed after use.

Yards should at all times and especially during the dry season be kept free of weeds, grass or other useless growth. Keep the under side of all piles free from any thing that will burn. Keep your yards and piles sprinkled during the hot dry season, it will be good practice for your plant department.

Last but not least we will deal with the human hazard. Careless handling of the "strike-anywhere" match, gasoline, oil or other combustible or inflammable material and the don't-give-a-cuss attitude of the careless smoker, are all causes that materially contribute to annual fire loss. A smoker will smoke and you cannot stop him. The only protection that I know of is to provide a safe place for him to indulge in the habit. Provide a room for the men to smoke in. Let it be the room where they eat their noon-day lunch and see that they use it at lunch hours and at other times, if they must smoke between meals. To my mind, it is far cheaper for the men to take ten minutes of the firm's time in a safe smoke than for you to spend ten years of your time replacing what has been lost through an unsafe smoke.

Provide a safe place for the men to hang their oily clothing after the day's work is over, this room should be outside the plant.

Should Have Own Fire Protection

Every plant no matter how small should provide some manner of fire protection of its own. It has been my experience that a blaze usually starts at the unexpected time and just when you are least prepared to handle it. The local fire department, if you have one, may be out attending another man's property when the invitation to yours arrives, or again bad road conditions may delay them and remember the first three minutes of any fire are the vital three minutes that spell success or failure. If you

are sincere in your desire to protect yourself from the fire danger it is up to you, Mr. Owner, to provide some means of holding the fire in check until the city department arrives. One pail of water at the start will prove more effective than a river full a few minutes later.

The only 100% efficient fire protection that I know of is the automatic sprinkler. I have yet to see it fail. In every case on record where it has failed, it has not been the fault of the system but of those in charge, closed valves or some reason for which the system could not be held responsible. It is the watchman that never sleeps, smokes or takes a vacation. When your plant is sprinkler equipped there is no guess work, you know that you are safe.

Recommends Standard Fire Hose

When the sprinkler is out of the question other means of protection must be considered. For plant and yard protection I would recommend standard fire hose of the type used by the local fire department. Hose can be either carried on a reel or attached direct to the plug.

Yard hydrants should be so placed that the part protected by any individual hydrant could be covered by using not more than 300 feet of hose. All hydrants so situated should be equipped with 350 feet of line. Yard hydrants should be distant at least 75 feet from any building or pile and housing over hydrants and hose equipment should be fire proof and ventilated and care should be taken that hose is perfectly dry before putting back into service.

Subdivide your yard with wide roomy alleys and keep them free from any obstruction. Soda and acid extinguishers should be placed throughout the plant.

Organization of Plant Fire Department

The manner of organization of any plant fire department will of course depend a great deal on the size of the plant. The first thing to do is to appoint a chief. This man should have some executive ability. He should be one who is thoroughly acquainted with the plant and water supply, and should be clothed with unlimited authority in all things connected with his office. It would be well for him to take up the matter of organization and drill with the local fire chief as his knowledge will be of great assistance in getting started right. If the advice of such a man is not available a letter to this office stating the size of the plant, available water supply and, if possible, a plan of the yards, will bring a plan of plant organization. It has been my experience that a small crew of well trained men is more efficient than a large crew only half trained.

Figure out the number of available fire streams and allow three men to each stream, two for the nozzle and one for the valve. The valve man should never leave his post until he turns on the water or is told that it will not be required. One man should be detailed for every 5000 feet of yard space to act as a fire patrol. It would be his duty to patrol the yards during the progress of the fire and protect the plant and other parts of the yard from flying sparks.

Ascertain by frequent tests and examinations that every member of your crew knows the location of all hydrants and extinguishers. Their care and operation. Detail two members of your office crew as signal men to alarm the local fire department by box as

well as telephone should a fire occur. Valuable time may be lost through delayed transmission of the alarm to the fire department headquarters. Where the city or town has a standard fire alarm system a private box should be installed in the plant. When this is done and the local fire department receives an alarm from this box, the chief knows just what to expect and takes the necessary apparatus to handle the situation.

Night Watchman is Important Employee

Do you realize that one of the most, if not the most important man in your plant organization, from a fire prevention standpoint is your watchman? When you appoint a man to take charge of a desk in your office you satisfy yourself beyond a reasonable doubt that he is efficient before he lands the job. Do you employ the same tactics when you engage a night watchman? The man on the desk is directly under your personal supervision during his hours of labor. It is not so with the night watchman. For sixteen hours out of the twenty-four, his honesty, alertness and good intentions are all you have to depend on as a protection against the fire danger. A great many plant heads when engaging a night watchman, accept as his chief recommendation the fact that he will work for small pay. This is poor business. Satisfy yourself that the man holding down the job in your plant appreciates the responsibility attached to the position. If he does not replace him with one that does.

Impressing Fire Preventions Upon Employees

Fire prevention propaganda in the form of DONT'S printed on red cards scattered throughout the plant are all right as far as they go, but they don't go very far.

Hold monthly fire prevention meetings in your plant; take the men into your confidence; show them that your interests and theirs are identical; tell them just what their co-operation in fire prevention work means to you and to the business. The results will more than repay you for your effort.

Inspect your plant yourself and if you see a fire hazard, point it out to the man in charge, warn him of the danger but don't have a cigar in your mouth when you tell him.

Try and realize that the fire god does not limit his greed to the destruction of property. He very often demands human life as a sacrifice. During the past ten years this demon of destruction has left as a memorial a pathway lined with blind and crippled children that extends from the Atlantic to the Pacific. Are you sure that yours are safe?

Remember that your responsibility does not end when you have made your factory safe. When you go home to-night carry the fire prevention message to your home. Every sputtering light switch, pile of rubbish, defective chimney or heating apparatus acts as a danger signal that demands immediate attention.

When the fire chief calls to inspect your plant or home greet him as a friend and you will find that he is a pretty good fellow. Follow out his suggestions and assist him to eliminate the fire from your plant, your home and your city. Adopt the words, "Fire Prevention," as a business slogan. Practice it every day in the year and you will make your community or city a safer place to live in and yourself a better citizen.

ILLUSTRATED NEWS OF GREAT INDUSTRY

Newest Lumber Industry in Quebec City Now Operating to Capacity

Bridgewater Lumber Co., has Splendid Modern Equipment and Excellent Shipping Facilities and Does a Large Dressing in Transit Business—Electrically Operated and of Steel and Sheet Iron Construction

The Bridgewater Lumber Company, Limited, was recently organized in Quebec and, since its inception, has met with a gratifying measure of success. The company was formed through the vision and foresight of W. Gerard Power who has many extensive interests in the timber and sawn lumber trade. He is the president of the new concern which was formed last spring by a group of young business men with experience in the lumber line to take care of the sawn lumber trade between Quebec and United States in co-operation with the firm of Power, Moir & Stocking, New York, importers of Canadian wood for American market.

The Bridgewater Lumber Company, Limited, though in existence only a few months is doing a fine business. at present sixty men are in the employ of the mill but it is expected that before the end of 1923 this number will be increased to approximately 200.

The new planing mill building located at Cap Rouge in close vicinity to the Quebec bridge, is an ideal situation for such an enterprise. It is seven miles from the City of Quebec, with easy access to the river St. Lawrence and in close proximity to all railways running east, west, north, and south on both sides of the river St. Lawrence and in connection with the American interests of the New England, New York and Western States.

The planing mill building with railway siding at each side of the mill is 105 x 75 ft., all steel construction, sheathed and covered with corrugated sheet iron. The steel work on the structure was contracted for by the Eastern Canada Steel & Iron Works Co., of Quebec City, and the sheet iron supplied by the Montreal firm of W. McNally & Co.

Walter Walsh, for over twenty years in the employ of the Power Lumber Co., as engineer, wheelwright and superintendent of operations, had charge of the construction of the mills of the Bridgewater Company.

In connection with the mill erected on the latest plans for accommodation and efficiency, there has been built a shaving house a short distance from the mill into which the shavings and sawdust are blown into a baling press, baled and sold for various purposes. This installation was placed by Henderson, Barwick Co., of Montreal. The whole plant is operated by electricity and is clean and inviting at all times.

Most of the machinery in the planing mill was supplied by the

P. B. Yates Machine Co., of Hamilton, Ont., including the heavy No. 91 planers, which are the last word in planing mill equipment. The Simonds Canada Saw Co., of Montreal, furnished all the necessary filing room machinery, saws, etc.

There are extensive private and railway sidings on both sides of the mills and yard and in close proximity to the railway station. The plant also includes a small sawmill of wooden construction with good machinery. This mill is not required to run the whole time as most of the stock coming to the plant is already sawn into lumber ready for dressing and milling. The sawmill turns out excellent work and is a handy addition to the plant. This also is run by electricity. In connection with this plant there is also an immense all-steel water tank 95 feet in height with a running capacity of nearly 6,000 gallons per hour. It is kept full all the time.

Ample Yard and Storage Room

The company is operating under the style of Bridgewater Lumber Company, Limited, and is located at Bridge, Que. Mr. Power succeeded in leasing 50 acres of land from the Canadian National Railways to locate the new mill, and its storage yard with transportation facilities are unsurpassed. The plant has been completed and is now running to capacity and the immense piling ground adjacent will enable the organization to store millions of feet of lumber.

The company has already secured orders from Ontario and U. S. firms for the dressing of their lumber in transit and are doing excellent work and giving great satisfaction. There is installed up-to-date machinery for the planing and dressing of all kinds of lumber and the plant is in a position to do any work in this line of business to the satisfaction of their customers.

The main purpose of the organization of the company and the building of the planing mill was to handle the output of the sawmills of the companies in which Mr. Power is interested, but the Bridgewater Lumber Co. also handle stock as well and the facilities are open to all dealers who may wish to have their lumber dressed in transit. The Bridgewater Lumber Company are also carrying on a general wholesale lumber business.

The directors of the company are W. Gerard Power, president and managing-director; Thomas McCarron, vice-president and treas-

Part of the interior of the dressing mill of the Bridgewater Lumber Co., showing some of the machines.

surer; P. J. McGoldrick and John J. Power, directors, and J. H. Fugere, secretary and director. J. A. DesRoches is the manager of the plant and the capital of the company is \$100,000.

Mr. Power is widely known in the industrial arena and founded the River Ouelle Pulp & Lumber Co. in 1902, of which he was manager until 1920 when the Power Lumber Co., Limited, was organized to succeed the River Ouelle Co. Mr. Power possesses splendid business ability and initiative and was with the firm of W. & J. Sharples from 1897 to 1902 and the River Ouelle Pulp & Lumber Co. from 1902 to 1920 when the Power Lumber Co. took over all rights and interests of the River Ouelle Co. He was also a trustee of the Na-

tional Wholesale Lumber Dealers' Association, New York City, from 1917 to 1920; President of the Woodlands Section of the Canadian Pulp and Paper Association in 1919; Honorary President of the Southern St. Lawrence Forest Protective Association, Limited; Chairman of the Canadian Lumbermen's Association 1919 and 1920; President of the Peninsula Lumber Co., Quebec; President of Power, Moir & Stocking, Inc., of New York; President of the Province of Quebec Limit Holders' Association; Chairman of the Quebec Harbor Commission; President and Managing-Director of W. & J. Sharples, Limited, of Quebec.

Is Our Educational Policy Helping Industry?

The need of vocational training to enlist interest of younger generation in wood manufacturing.

Secondary schools should make the course attractive by closer co-operation with the industry itself.

There is a grave menace threatening Canadian industry today in the lamentable shortage of young Canadians entering industrial lines of work. To supplement this serious situation there is another angle to the problem which strikes at the very pride of the people of Canada. Foreign people coming to Canada from European countries skilled in their various lines of industry, will in a few years, inevitably control the country unless young Canadians are taught to work with their hands as well as their brain.

Every thinking Canadian engaged in the manufacture of wood products and who employs mechanics, should give every possible assistance to the association to which his is connected in launching some practical plan of selling young Canadians the honorable and valuable proposition of making and doing things with their hands.

School Trustee John Wanless of Toronto at the first meeting of the committee appointed recently by the Board of Education to survey secondary school education in the city schools, stated that the average child of fourteen is in the fourth book and from there he should go on to learn his trade or business. "As it is, we allow pupils to drift on through two or three years of high school training. When they have finished that, most of them simply will not work with their

hands," he declared. Collegiate institutes are, it was pointed, primarily design for those learning a profession—and professional people number about ten per cent of the total population. The manifest unfairness of catering to this ten per cent by building and maintaining expensive colleges is flagrant, while at the same time, the remaining ninety per cent are allowed to start out in the world without any particular training for a useful life's work.

These remarks are significant and illustrate that educational bodies are realizing the need for practical and specific training. Lumber associations in Canada, who have as a continual discussion, at their gatherings, the problem of securing apprentices, should recognize that the educational boards throughout the country are ready to co-operate with the various industries in teaching children to respect and become interested in industrial work. This respect must be fostered by the schools instead of being discouraged by them. It is incumbent upon the woodworking and allied trades to take the initiative if progress is to be made in revising the educational policy in Canada, so as to interests youths in the wood manufacturing industry in the secondary schools.

At Kitchener and Waterloo, Ontario, a new collegiate institute was

If the educational system of this country is not promptly revised so as to give the native-born Canadian both the desire and the ability to do real, hard work, the control of Canada will pass out of the hands of the present generation into those of the incoming foreigners.

John Wanless

Before the first meeting of the Toronto Board of Education to survey secondary school education.

completed and opened early this month and will include several vocational departments among which will be one for teaching furniture and cabinet making. Behind this valuable adjunct is an advisory committee selected from the personnel of the many furniture companies in the Twin Cities to assist the Board of Education in framing a suitable course and deciding on the necessary equipment. While it is not the intention to turn out mechanics, yet the course is expected to provide a start which will elevate the furniture and cabinet making trades in the minds of the younger people of the district, so they may voluntarily choose it as a life's work. This is an instance where an industry, strong in the community, has taken the initiative and, by its influence and the co-operation of the Board of Education has planted a seed that will fructify and before many years, prove a boon to both the industry and community.

The Widening of an Important Work

Vocational training is not a new thought, but it can certainly be more widely entertained in collegiate institutes where, as has already been stated, many pupils wander along a couple of years and decide to leave school. Whose fault is it? Mr. Wanless states that it is a defect in the educational system. The educational system is certainly in error when ninety per cent of its adherents are not considered. It rests with the employers of industrial artisans to see that the schools are in sympathy with industry instead of working against it as most of them are.

The woodworking trade, although hard pressed for suitable apprentices, is really in a better position to gain the interest of the younger generation than the majority of trades. Working in wood is first of all, the cleanest of occupations. It requires skill and training to correctly judge, prepare and utilize the different commercial wood to the best advantage. No field of industry presents greater opportunity for a youth to exercise his power of originality, his taste for the artistic and the commendable craving for planning with his brain and executing with his hand some article that will be an object of decoration or service in the home or other building. There is no valid reason why the secondary schools of Canada should not make the course of working in wood in their vocational departments really attractive by close co-operation with industry itself. The fault with most manual training courses in the schools, is that the pupil is not told of the splendid woodworking industry which is really the advanced work of that which he is taught in his elementary studies of wood. If youths were afforded some idea of the great business of which they were just touching the fringe, it would be an added inducement for them to proceed with their studies and practical knowledge of wood manufacturing.

The "Canada Lumberman" would be glad to hear opinions from readers who have ideas which they would like to see put in operation along the line of practical instruction in woodworking in the secondary schools of Canada.

Construction work on one of the twenty cottages put up this summer at Elsas

The Rapid Development of Elsas

Continental Wood Products Company is Constructing Model Town in Sudbury District and Will Add Large Kraft Pulp Mill to Its Other Enterprises

—What Has Been Done in Housing Line—

Elsas, Ont., will in the near future have a large kraft pulp mill which will be erected at a cost of \$1,500,000 by the Continental Wood Products Co. This organization was a few weeks ago awarded the right to cut pulpwood and timber on the area situated in the watershed of the Trout and Chapleau Rivers in the district of Sudbury, comprising a territory of 1,049 square miles. Construction will be started within the next few months on the new mill and before June 1924, \$500,000 must be expended. The capacity of the mill must be 75 tons a day and 100 persons must be employed. The company, which is a subsidiary to the International Paper Co., is a concern which is doing things and may be relied upon to carry out faithfully and efficiently its agreement with the Department of Lands and Forests of Ontario in the erection of the enterprise in hand.

Expansion is the watchword of the Continental Wood Products Co. which this summer built 20 cottages at Elsas, while others are in course of erection, together with a school and clubhouse. The cottages are finished with Beaver Board and hardwood flooring consisting of two bedrooms, one sitting-room, one dining room, kitchen, pantry and toilet with a large covered verandah in front.

The company operates a sawmill, lath mill and barking plant at Elsas which live centre takes its name from Mr. Herman Elsas, president of the Continental Paper & Bag Mills, New York, with which the Continental Wood Products Co. is directly connected. The sawmill of which W. J. Palmer is superintendent is equipped with a double cut band and has a capacity of 70,000 ft. per 20-hour day,

while the lath department, which has a lath machine and bolter, has an output of 40,000 pieces within the same time. There is installed in the barking mill a large Paulson drum with a capacity of 200 cords of wood per ten hours. The sawmill is situated at the confluence of the Trout and Kapuskasing Rivers in the township of Kapuskasing about one quarter of a mile from the Canadian National Railway.

The major buildings in Elsas consist of bunk house, cook house, store and office building and the residence of the manager. The bunk house has sleeping quarters for 150 men with a new annex for accommodating another 50. The cook house has a dining room which can take care of 200 men at one sitting and the upstairs part has 12 individual bedrooms which are occupied by the kitchen staff and general foremen.

All the larger buildings are equipped with steam heating, running hot and cold water and lavatories, all of which are connected with the main sewer to which is attached at a distance from the plant, a triple septic tank capable of taking care of 250 men. The water for the town and major buildings is provided by a large steel tank 80 ft. high with a capacity of 40,000 gallons. It is supplied by a 200 h. p. Sterling engine with a Cameron pump, capable of filling the tank at the rate of 800 gallons per minute. This means of water supply is reinforced by a steam auxiliary 200 h.p. pump with a capacity of 1,000 gallons per minute.

The entire mill site is covered by eight hydrants with hose boxes, containing one fire lantern, one fire axe, one nozzle and 300

On the left is seen the store, bunkhouse and office building of the Continental Wood Products Co., at Elsas, Ont. Next appear several of the attractive cottages put up for the workmen and on right is the busy plant of the company

ft. of 2 ½ in. hose which is always in readiness in case of an outbreak of flames. The company has installed at the intake of the water supply a chlorine plant to ensure that the water is in fit condition for the men and their families.

The entire cut of the sawmill and lath mill for last year and this year was sold to the Canadian General Lumber Co., of Toronto, and the pulpwood is being shipped direct to the company's own mills in the United States. It is loaded into cars by the aid of two electrically-driven loading conveyors.

The present holdings of the company consist of 1,049 square miles of pulpwood and timber concessions, covering 17 townships, which as stated was purchased at the recent sale in Ontario conducted by the Department of Lands and Forests. It also has 117 square miles of timber licensed land composed of the township of Sherlock, 81 square miles, and the township of Borden 36 square

miles and also 125 square miles of freehold lands.

As power is an important element in the production of pulp or paper, it is of interest to note that on the Kapuskasing River within twelve miles of Elsas, there are available for use two water power sites, one of 33 feet head and the other 73 feet head with splendid storage facilities, capable of being developed for 8,500 h.p. at economical cost.

The establishment of the 75-ton per day kraft pulp mill at Elsas will remove any difficulties that may crop up regarding the disposition of pulpwood from the Continental Wood Products Company's freehold lands. In the past it has shipped this wood to the parent concern in the United States but, if the proposed embargo on pulp wood exports is put into effect, such shipments would not be possible. With the establishment of the big pulp plant all of the company's wood could be cared for in Canada.

No Extensive Operations for Export in Quebec But Pulpwood Cutting in Burnt Areas Will be Heavy

The Quebec lumber interests are looking forward to an early clearing up of the European political horizon that will enable an economic recovery and the amelioration of the world's interchange of industrial and commercial relations to assure peace and confidence in the entire world. Heartened by this prospective change, the Quebec lumber operators and exporters anticipate a reaction for which they are preparing to participate in the year 1924.

The firm stand taken by the British Government to bring about an agreement on the reparation question, leaves no room for doubt that England's attitude in this regard is backed by the world's public opinion, including the United States and the possibility of the United States lending its official influence to put an end to the economic war between France and Belgium with Germany, and the menace of a European cataclysm to endanger the economic equilibrium of the entire world. It is quite possible that before the second week of September will have expired that the government, in order to avert civil war which threatens Fatherland, will approach Premier Poincare, of France, with a proposition that will bring about negotiations for a settlement of the reparations difficulty on which the entire civilized world is interested and hope for an issue of success.

Is Ending of Chaos in Sight?

Taking into consideration these signs for a settlement of the Franco-Belgium and German difficulties and the disappearance of the dark political clouds which have been hovering over Europe during and since the end of the war and the prospect of stability in the rates of exchange, have caused the business public to look to the ending of the chaos which has so upset and demoralized the commercial world for the past eight years.

The end of the dockers' strike on the Thames and the latest advices cabled by the United Kingdom agents of the Quebec lumber interests, have added a feeling of encouragement that augurs well for the export shipment of Canadian wood to the United Kingdom market in 1924.

In the meantime the Quebec limit holders have not up to the present made an estimate of the logs they intend cutting in the woods this coming winter. Discussing the question with several of the Quebec lumber operators the correspondent of the "Canada Lumberman" was informed that they had come to no conclusion as yet. Nor had they drawn up any estimates of the logging to be carried on in the woods for 1924 export to the United Kingdom. While they feel assured of the efforts being put forward by the British Government to end the Ruhr situation and the political difficulties in general in Europe, they fear that the scarcity of labor for logging in the woods this winter, will cause such a demand for increase of wages as to compel them to curtail the cutting for shipment to the British market. Besides the demand for manufactured lumber from the United States market in which the Canadian mills are deeply interested, still continues and with every prospect of being maintained throughout 1924.

Survey of Probable Conditions

One of the most astute business experts in the Quebec district, on being requested to give his opinion on the situation said:—"It is rather too early as yet to give a forecast as to the logging that will be carried on in the Quebec woods this coming winter, I may say,

however, that the time has passed for pessimism in the Canadian lumber trade. We are now looking forward for a long season of good business but as yet have not prepared estimates for the work we intend carrying on in the woods this coming fall and winter. In the meantime, I fully realize that the political difficulties in Europe are nearing the end to reopen all the avenues of commerce which have been closed on account of the war and its aftermath by the near settlement of the reparations and, when this vexed question is settled by Germany approaching France and Belgium in accordance with present appearances, the Europeans will come back to the road of normalcy, stabilize the rates of exchange and rejuvenate business in general.

"But we must consider that after a settlement is reached over the European political situation, it will require some little time to adjust the economic conditions and the credit of the nations that have been involved. Again, it must be recognized that the dockers' strikes in the seaports of England have caused more or less harm by retarding the commerce and building industries of Great Britain. This can be readily understood when we come to consider the several hundred ships, including over sixty lumber-laden vessels that have been held up in the shipping ports which will take time to unload and months to adjust the embargoes caused in construction work as well as general business. Hence, while I am optimistic regarding the near future in the ultimate settlement of the Ruhr question and the adjustment of economic conditions in Europe followed by a renewal of trade and industrial prosperity in England, I feel that it will take many months to ameliorate the situation to produce the stability so necessary to instil confidence in the financial circles of the United Kingdom and the European world in general.

No Extensive Cutting for Export

"In the meantime the Canadian lumber trade, as far as it regards the Quebec interests, have the aspect of their home conditions to study,—the forest fires of the spring and early months of summer of the present year that caused so much destruction and the cost of lumber operations in the woods this fall and coming winter. This leads me to believe that there will not be any extensive cutting for export to the United Kingdom market this winter but instead there will be the customary logging to supply the American market demand for manufactured lumber and an abnormal cutting of pulpwood. I am informed, however, that extensive logging operations in timber for export to England, will be carried on in the Ottawa district during the coming winter.

As regards the cutting of pulpwood in the province of Quebec arrangements are being made by the different pulp and paper interests for operations on a large scale. The burnt forest areas will have to be exploited for all they are worth to save the wood from the worm and, in addition, to this limit holders, who have had surveys made of their forest properties, have come to discover that they can log 50 per cent of the stands swept by fire to be sold as lumber culls.

"One of the formidable difficulties the Quebec lumber operators will have to contend with this coming winter will be the cost of logging. The unusual cutting of pulpwood will cause a big demand for labor which in these days is scarce. This naturally will create a higher cost of labor that is likely to cause a curtailment in the logging for export to the United Kingdom.

New Circular Gang Saw for Small Logs

John M. Maclean, of Campbellton, N.B., who is with Stetson, Cutler & Co., is the inventor of a circular gang sawing machine which has attracted considerable attention. One of these saws has been installed in the Stetson, Cutler mill and in other plants. The machine was designed for manufacturing the smaller logs that are now so largely cut in eastern mills in order to get bigger production and a more accurately sawn product.

Mr. Maclean believes that his circular gang saw can be adapted to mills of any capacity. One of the most important features of the equipment is that, owing to the arrangement of the feeding in

General view of Maclean circular gang saw

press rolls, stocks can be sawn with only a slight slab taken off one side of the log, thus allowing the carriage to handle over twice as many logs as could be done when both sides are slabbed in supplying the stock.

The Kendall patent arbor and guides are used in this machine and the inventor says they have proved the most efficient for the successful operation of circular saws in gangs, ensuring evenly sawn lumber.

The capacity of the circular gang saw depends on the number of logs that can be supplied it. It can take care of any quantity up to 3,000 in a ten-hour day and from 3 inches to 10 inches in thickness. The saws used are from 24 to 32 inches and of 10 gauge.

Mr. Maclean, who resides at Campbellton, N.B., states that he will be pleased to give any further detailed or technical information to interested parties regarding the operation of his machine which has been working to advantage for some time.

Ford Conserves Lumber Supply

Salvaging of approximately 90,000,000 feet of lumber annually at its Highland Park plant is the Ford Motor Company's contribution to national forestry conservation.

Aside from the wood used in manufacturing automobiles, the company's requirements for packing and shipping run into enormous figures and to provide lumber for this purpose every scrap is utilized through the salvage department, even to the smallest possible pieces.

The department, formed principally as means of reducing waste, is conducted purely as a conservation agency. While it was not the intention of the company to make it profit-producing, yet by putting it on an efficient basis, it has progressed to the point where it is now self-sustaining.

An average of 800 men are employed, working twenty-four hours a day in three eight-hour shifts, and the work includes the operation of the lumber yard, saw mills and the handling of all new and old lumber for shipping.

While every day the Highland Park uses more than 200,000 feet of new lumber in making shipments, the salvage department daily re-claims nearly 300,000 feet of old lumber and converts it into boxes, crates, cleats, braces and other pieces.

Every factory unit in the Ford organization constantly strives for 100 per cent. lumber salvage. At the River Rouge plant, the Lincoln plant and at all branch plants throughout the country, every bit of lumber possible is used for shipping and what remains is sent by the carload and the truck load to Highland Park where facilities

permit the utilization of smaller pieces than at any other place and where salvaging is carried to the extreme limit.

Employees engaged in unpacking incoming shipments are instructed to carefully remove all board with as little damage as possible, thus permitting the salvage department to utilize them to the utmost.

Lumber from more than 1,500 worn-out box cars from the D. T. and I. has found its way to the salvage mill to be converted into boxes and crates and other pieces needed for shipping.

Standardization of shipping packages has done much to bring greater efficiency in the lumber conservation program.

Three years ago the company was using 600 different sized boxes and crates for shipping. Today 95 per cent. of the same shipments are being made in boxes of 14 different sizes, some filling as many as 100 different needs, and 45 boxes and crates of different sizes meet all the other shipping requirements.

At present the salvage department is turning out an average of 15,000 boxes and crates a day and it is not uncommon for a box or crate to have three or four kinds of wood in its make up. Recent introduction of burlap bags for making certain shipments cut the box requirements down about 5,000 a day.

Salvaging proceeds, in a building 80 feet wide by 700 feet long, on the well-known Ford continuous production system. As old lumber salvaged from boxes, barrels, boards and scrap wood of every imaginable kind comes in, it is sorted and placed on a continuous conveyor which carries it past various sawing stations. Workmen on the line pick out boards of most desirable size for their needs, the aim being to always saw the longest pieces from the available boards.

Scraps move on to the end and into great shredders where they are cut into small pieces, then caught up in a suction tube and blown over to the furnace rooms to be used as fuel. Complete boxes move on to departments requiring them.

Crate pieces, cleats and braces are sawed to proper sizes and are sent to the several departments, each assembling its own crates.

Two departments may be used to illustrate the great daily requirements for this kind of lumber. The radiator assembly department utilized twenty-two pieces of wood in every shipping crate and an average of 2,200 of these crates are sent out every day.

In the carload shipment of 100 motors, 750 feet of heavy lumber is required for proper bracing and packing. With more than sixty-four of these cars going out daily, a total of over 50,000 feet of lumber is required every day for the shipment of motors alone.

Lumber conservation as practised by the Ford Motor Company, has proved a practical business investment, but of far greater significance is the saving in forestry it makes possible, and the example it sets for private and public enterprise throughout the country.

Heavy Loss in New Castle Mill Fire

Fire broke out recently in the old Hickson mill property at the upper end of Castle St., Newcastle, N.B., and for a time threatened the entire business section of the town. The mill had not been in use for some years and it is thought the blaze originated from a spark from a passing tug. The flames wiped out the mill and its contents and about 500,000 feet of sawn lumber and 1,000 cords of pulpwood. The loss suffered by those interested is between \$75,000 and \$100,000 and is partly covered by insurance. The principal losers are, James Robinson, Millerton, and the W. A. Hickson Estate, joint owners of the mill; H. V. Berry, Fort Plain, N.Y.; W. Malcolm Mackay, St. John; Moses Schaffer, Blackville, and Chas. Sargent, Newcastle, owners of the lumber, and Alex. R. Voyer, of Fredericton, who owned the pulpwood.

High Honor for Thomas A. Low

Hon. Thomas Andrew Low, the new Minister of Trade and Commerce, is a practical business man who should have a thorough grasp of the affairs of his department from the standpoint of Canadian manufacturers and exporters. He is a lumberman and manufacturer, being president of the Renfrew Machinery Co., president of the Renfrew Flour Mills, president of the Renfrew Refrigerator Co., president of the Renfrew Electric Manufacturing Co., president of the Renfrew Manufacturing Co., president of the Opeongo Mica Mines, president of the British-Canadian Export Co., and a director of the Renfrew Power Co. Born in Quebec and educated in the Renfrew Public and High Schools, he has been connected with the lumber business since 1889. He organized the Renfrew Machinery Co. in 1909, for the manufacturer of cream separators and gasoline engines and employs 350 hands. In 1904 he organized the Renfrew Manufacturing Co., for the manufacture of sash, doors and blinds and general contracting. In 1902 he organized the Renfrew Flour Mills and in 1912 the Renfrew Electric Manufacturing Co.

Handling Lumber with Speed and Efficiency

Travelling Cranes Used to Deliver Unit Packages in Yard—Quantity Piling is Economically and Speedily Carried Out—Well Kept, Uniform Stacks

New methods of handling lumber are always interesting and much progress has been achieved during recent years in sorting, piling, unloading and distributing forest products. This means speed, efficiency and lower cost of handling. Great success has been attained in an effective, economical and quantity piling of lumber particularly hardwoods through the installation of industrial locomotive cranes.

Plenty of air space and narrow piles and complete elimination of rotting stack bottoms contribute materially to a well cared for stock. The lumber has every opportunity to dry thoroughly and flat and there is no guess-work about the product or a sense of indifference or neglect. No loose sticks or stray boards are scattered around. Everything is neat and attractive and the visitor to any retail, mill or factory yard is impressed with the well-kept, uniform stacks of lumber and long, regular alleys free from weeds or litter. The foundations are even and firm, the piles straight and erect and the surroundings pleasing and inviting.

So far as the modern handling of hardwood lumber is concerned, one of the most progressive firms in this line is the Voth Hardwood Co., of Voth, Texas, which is a subsidiary of the Kirby-Bonner Lumber Co., of Houston, Texas. Their mill has a capacity of 100,000 feet a day and it is interesting to describe how the lumber is handled through the installation of three industrial locomotive cranes.

Arthur M. Bowen, manager of the Hardwood Sales Department, in a recent letter to the "Canada Lumberman," relating to the system, says,—"It is rather difficult to outline its operation showing the system which the company uses in handling lumber with industrial cranes. The company are operating at present three E. A. standard industrial oil-burning locomotive cranes and are handling to and from the yard approximately 5,000,000 feet of lumber per month."

The company state that their experience

has been very satisfactory and owing to the size of their operation, they do not believe they could have handled the lumber as efficiently under any other system as by means of industrial cranes.

The lumber, after it is properly segregated and stacked on the stacking platform into packages four feet wide by six feet high, is handled in these packages which contain approximately 1,300 feet each. Each locomotive crane is equipped with a short flatcar coupled in front, and another one in the rear, upon which these packages are placed, enabling them to carry at one trip from the mill to the yard, or vice versa, four packages to the car, or a total of 10,400 feet of lumber at one trip.

These machines operate on a geared turn-table, enabling them to turn completely around if necessary, and they are also geared to the driving trucks, moving from the mill to the yard, or from place to place under their own power. The company have been handling in the neighborhood of five million feet per month with these cranes, with a crew to each crane of three men—the operator and two laborers.

From the mill the lumber passes to a double-deck sorting table two hundred feet long, the sixteen foot lengths passing over the upper deck, the shorter stock going to the lower deck. On the sorting table the lumber is separated, each kind, grade, length and thickness going into a separate package of uniform width and height.

The packages are picked up by an "Industrial Works" eighteen ton, specially built locomotive crane and loaded on flat cars set fore and aft of the crane, each flat car carrying seven packages. Each package rests on two pieces of three by three oak, about six inches longer than the width of the package. These bearings fit into stirrups on the crane chains. Packages from the upper deck are picked up direct, while those from the lower deck are run out on to a transfer car.

The crane conveys these bulk packages to the stacking

Yard alley showing lumber stacks neatly built up on special foundations and how each pile is erected by means of unit packages

An industrial crane delivering unit packages of lumber in yard

platform which is provided with fifteen separate trackways. Six of these are built with a slight incline toward the stacking table at the rear. The crane places the bulk packages on short dry kiln trucks. These packages are run to the stacking table as required, and the empty trucks returned to the front. There are six stacking tables, two under each shed, which are so arranged that the stacked lumber may go to the dry kilns or to the yard for air drying as desired. Two men work at each stacking table.

Uniform stacking has long been desired and under the arrangements at the Voth plant it comes very near realization. A gate that can be raised or lowered to fit the height of the stack, carries slots spaced on two foot centres for the placing of the sticks, each gate carrying two sets of slots, one perpendicular for kiln stacking, the other slightly inclined for yard stacking. Eight foot stock is stacked with the sixteen-foot, and six foot with the twelve foot, with a doubling of sticks occurring at the centre of each stack, so as to leave

Making solid foundations with concrete and steel rail stringers

no loose ends. Each stack rests on two pieces of three by three oak, and these in turn rest on short dry kiln trucks. Each stack or package is exactly four feet wide, and contains thirty-three layers of inch boards for the yard stock, or forty-eight layers when stacked for the kilns, and is an absolutely perpendicular stack for the kilns, or with a "lead" for the yard. A single cover of No. 3 boards is placed on each package of No. 2 and better. The sticks in the slots eliminate guess work and the sticks are always in a uniform line. Stacked packages are built on tracks having a slight incline toward the main yard line.

How the Packages are Handled

When a package has been stacked it goes to the transfer car, if for the kilns, which transfer is made direct without any crane lift. If the package is for the yard it is rolled back to the track end of the platform, where it is again picked up by the crane and transferred to flat cars. So far only two bearings have been found necessary for inch lumber, and there has been no trouble about sticks dropping out even with sixteen foot stock.

When the two flat cars have been loaded, the crane proceeds to the yard with its cars, travelling under its own power at the rate

of eight miles per hour. Arriving here, each package is picked up in turn and set on its proper foundation, or on the top of the proper uncompleted stack, three units making a complete stack. The two bearings sticks remain as they were, and three more are added to afford proper base support. When a package rests on another in the yard two pieces ten feet long are used fore and aft, as a tie bar for two stacks. Views of the yard show that it is possible to build these packages so as to have a stack with uniform pitch and "pull" from top to bottom. In shipping from the yard this process is merely reversed, the crane handling each package as before, and conveying it to the shipping dock, where the inspector takes charge, putting the coverings and sticks into racks which the crane later returns to the stacking platform. The shipping dock has a capacity of ten freight cars under roof and has ample space for storing lumber found above or below grade.

Way the yard is Laid Out

The yard has streets thirty-five feet wide with a standard gauge track laid with 60- pound rail, extending down the centre of each street. While it may detract from the symmetry of the yard, it has been found advisable to place stacks with their "tails" toward the street. Alleyways ten feet wide separate the stacks at the rear, allowing plenty of air space. The streets and alleys are north and south, with the stacks placed east and west giving the prevailing south winds free access between the layers. The stack bottoms are so built that there is also an abundance of free air space under the stacks.

The general plan and construction of the yard is of particular interest. There will be no stray odds and ends at any time about the yard and at no time will there be more than four men at work on the yard, and these men consist of the locomotive crane crew.

The foundations are all of concrete, and the stringers are steel rails cut to sixteen-foot lengths and embedded in the concrete base. Each pair of foundations measures ten feet in width, accommodating two four-foot stacks with two feet of air space between. The outside blocks of each foundation are single, twelve by fifteen inch tops, while the inside ones are double, fifteen by thirty-six inch tops, and carry the two outside rails of the two stacks. Four feet of space is allowed between each set of foundations. The rear block is sixteen inches above the ground and the front block thirty-two inches high, conforming to the standard pitch of one inch to the foot.

During the time this yard was building many operators both pine and hardwood, who visited the plant, voiced some doubt as to the ability of the crane crew of four men to stack the product of such a large mill, and send in sufficient quantity of stock to the loading platform, but it has been demonstrated by actual experience that the plan is a feasible one, and it works admirably in every particular.

Experiments already conducted to ascertain the drying properties of the yard and yard arrangements have proven that the plans of those designing the yard have not miscarried.

Industrial locomotive cranes are built by the Industrial Works, of Bay City, Mich., and operated by steam, gasoline or electricity for yard service, construction and many other purposes. The cranes have a capacity ranging from 5 to 60 tons, with suitable booms varying from 40 to 140 feet in length.

Yarmouth Woodworking Industry is Busy

One of the oldest firms in the forest products line in the Maritime Provinces is the Canadian Wood Working Co., Limited, of Yarmouth, N. S. The business was established as early as 1855 and incorporated in 1902. The industry covers over three acres and the location is an ideal one on the waterfront. Excellent transportation facilities are enjoyed by means of the company's wharf and railway siding. On the property is located a six-storey factory with basement 60 x 100 feet, another building 50 x 100 feet, with a wing 40 x 60 feet, a planing mill and cooperage, the whole embracing a floor space of 55,000 feet. About 100 persons are employed with an annual payroll of \$50,000. The output, viz., 40,000,000 feet is sold in the Eastern provinces, Ontario and the British West Indies.

The Canadian Wood Working Co., manufacture oak and birch flooring, doors, sash, moulding, boxes and box shooks, light and dark cooperage and other woodworking products as well as church and school furniture, bank and office and store fixtures. L. K. Lanigan, who has had a wide experience in the lumber and manufacturing line, is the aggressive general manager of the company which is very busy at the present time.

There are two present day needs; one, for rich men to learn how poor men live; two, for poor men to know how rich men work.

Bushmen Are in Active Demand

There is a heavy demand for bushmen, according to the Government Labor Bureau in Montreal. The big lumber companies have been engaging men for the bush and the prospects are that the demand will be sufficient to make fall and winter conditions good.

Wages paid this year by the lumber companies are higher than last year, the rates paid being \$40, and \$45 per month, whereas a year ago the schedule was down to \$26 a month. Wages include board and lodging, and this year the companies are also engaging to refund transportation, one way, for men who stay the whole season, which means until next spring. The increase in wages is looked upon as a sign of a heavy cut this year, and a recognition that the unemployment situation has improved considerably as compared to last year. Bushmen wages are taken to be a good indication of the general labor situation. During the war, when newsprint prices were high, wages went to \$60 and \$65 a month, and even to \$75, in some cases, while the very experienced men who were given piece work made \$80 and \$90. It is quite possible, according to indications at labor employment offices that there will be a shortage of labor this year, both as to bushmen and men for railway construction.

The volume of oak flooring has increased ten fold during the last twelve years; from forty million feet in 1909 to 400 million in 1922.

Comprehensive Survey of Forests of Canada Needed for Permanent Development of Industries of Country

By Roland D. Craig, F. E., Ottawa

Though the aborescent flora of Canada includes approximately 160 species of hardwoods and only 31 conifers or softwoods, 80% of the standing timber and 95% of the lumber and pulpwood produced, is coniferous. Of the hardwoods there are only about 50 species, which attain saw-timber size, and less than one half of these are utilized to any great extent in the forest industries. The conifers are represented by ten genera but the species of the genera *Taxus* and *Juniperus*, occurring in Canada are small and of little value. The following is a list of the coniferous species of commercial importance.

Eastern Species—White Pine, Red Pine, Jack Pine, White Spruce, Red Spruce, Black Spruce, Hemlock, White Cedar, Tamarack, Balsam Fir.

Western Species—Western White Pine, Western Yellow Pine, Lodgepole Pine, Sitka Spruce, Engelmann Spruce, Douglas Fir, Western Hemlock, Western Red Cedar, Western Larch, Alpine Fir, Lowland Fir, Amabilis Fir, Yellow Cypress.

Though the term "softwoods" is generally accepted as including all coniferous species and "hardwoods" the other species which are generally deciduous, these terms are not entirely accurate as far as some of our Canadian woods are concerned. For instance the wood of larch and Douglas fir are harder than poplar, basswood, black ash and several other species classified as hardwoods. However, as long as it is understood that all the conifers are considered "softwoods" and all other species "hardwoods" the terms may be used without misunderstanding.

Too Little Data on Forests

For a large proportion of the forest area of Canada, there is very little reliable information regarding the nature and extent of the forest resources. A knowledge of the amount and location of the remaining stands of mature timber and of the extent and character of the young growth from which future supplies may be expected, is essential as a basis for federal or provincial forest policies and for the permanent development of the industries dependent on the forests.

Comprehensive surveys of the forests have been completed only for the Provinces of Nova Scotia and British Columbia. Reports of these surveys have been published by the Commission of Conservation. An inventory of the forest resources of Ontario commenced by that Commission is being completed by the Forestry Branch of the Department of the Interior, in co-operation with the Ontario Department of Lands and Forests. The Dominion Forestry Branch has examined extensive areas of forest land in the three Prairie Provinces but the information is still incomplete as to the total resources of these Provinces. For several years the New Brunswick Forest service has been engaged in making a thorough

survey of the Crown Lands of that Province and about 60% of these lands have been covered, but for 40% of the Crown Lands and the greater part of the Private lands, little definite information is available. The Quebec Forest Service is also collecting data as to the forests under its control, but as yet, only a relatively small portion of the forest area of the Province has been reported on.

Forest Area of the Dominion

Of the total area of Canada, 3,729,665 square miles, a large proportion is covered by the numerous lakes and rivers, leaving a land area of approximately 3,600,000 square miles. About 12% (431,700 square miles) is considered to be of agricultural value, but in 1921, less than $\frac{1}{4}$ of the area or only 93,180 square miles, was under field crops. There is estimated to be about 1,195,925 square miles of forest land in the Dominion, on 456,800 square miles of which, there is timber of merchantable size, suitable for pulpwood or other commercial uses, but only 240,000 square miles is the timber of saw-material size. On 60 to 65% of the forest land, the timber of commercial size has been destroyed by cutting or fire—chiefly fire. Natural regeneration has been effected on a considerable proportion of the logged-over and burned-over lands, but on thousands of square miles repeated fires have so reduced the recuperative powers of the forest, that only sparse and inferior stands can be secured by natural agencies.

From the information available which is frequently incomplete or conflicting, it is possible only to estimate in a broad way, the probable amount of timber in the Dominion. The figures given in the accompanying tables are, therefore, subject to revision when more definite knowledge is obtained.

TABLE I.

	Softwood Resources of Canada		Pulpwood Ties		Total
	Saw Material		Poles, etc.		
	1000 Ft. B.M.	1000 Ft. Cubic Meas.	1000 Cords	1000 Ft. Cubic Meas.	1000 Ft. Cubic Meas.
Eastern Provinces	76,101,000	16,666,115	552,210	64,700,590	81,366,705

Roland D. Craig, Ottawa, Ont.

The Situation is Not Without Hope

It is but natural that, with the apparently unlimited forest resources with which nature endowed this country, we should have been wasteful in their exploitation, but the time is not far distant when it will be no longer possible to move to new virgin tracts when the old are exhausted, and the forest industries will be dependent on the current growth. Owing to the time required to grow a forest crop, provision must be made now for future supplies. After a careful study of the situation I am of the opinion that there will be a period when the supply of accessible mature timber in eastern Canada will not meet the demand and the resources of British Columbia will have to be drawn on to an even greater extent than they are at present. The situation is not without hope, however, for there is a steadily increasing appreciation on the part of the citizens of Canada of the value of the forests in the industrial development of the country, and when sufficient public support is secured to prevent forest fires and to regulate the cutting with the production of future crops in view, we have the lands and the climate to grow the timber which will support an immense forest industry and provide a great and dependable source of wealth to the people of Canada.—Roland D. Craig.

Softwood		1000 cu. ft.	1000 cu. ft.
Spruce	25,264,715	44,783,154	70,547,869
Balsam	10,516,820	19,203,440	29,720,260
Jack Pine	3,996,530	25,254,492	29,251,022
Cedar	17,979,240	4,065,761	22,045,001
Douglas Fir	16,512,600	374,400	16,887,000
Hemlock	14,879,518	1,265,136	16,144,654
White Pine	3,627,025	4,559,958	8,386,983

Larch	732,115	710,184	1,442,299
West. Yellow Pine	876,000	117,000	993,000
Yellow Cypress	876,000	117,000	994,000
Total	96,326,708	102,083,260	198,409,968

Pulpwood

The total amount of timber suitable for the manufacture of pulp and paper is estimated to be as follows:

Estimate of the Pulpwood Resources of Canada**TABLE III.**

		Spruce 1000 cu. ft.	Balsam 1000 cu. ft.
Eastern Provinces		37,532,369	21,120,835
Prairie Provinces		14,773,500	713,925
British Columbia		17,742,000	7,885,500
TOTAL		70,047,869	29,720,260
Equiv. in Cords (117 cu. ft.)		598,699,735	254,019,316

Hemlock	Jack Pine	Poplar	Total
1000 cu. ft.	1000 cu. ft.	1000 cu. ft.	1000 cu. ft.
1,402,126	5,999,372	10,457,210	76,511,912
	19,497,450	18,902,900	53,887,775
14,742,520	3,754,200	190,000	44,314,228
16,144,654	29,251,022	29,550,110	174,713,915
137,988,496	250,008,735	252,565,043	1,493,281,325

Included in the above there are 264,358,000 thousand cubic feet as shown in Table IV which is of saw timber size and quality and undoubtedly a large proportion of this will be used for lumber.

TABLE IV.**Saw Material of Pulpwood Species**

		Spruce 1000 cu. ft.	Balsam 1000 cu. ft.
Eastern Provinces		6,321,215	3,426,695
Prairie Provinces		2,956,500	82,125
British Columbia		15,987,000	7,008,000
TOTAL		25,264,715	10,516,820
M. 1000 cu. ft.		115,364,000	48,022,000

Hemlock	Poplar	Jack Pine	Total
1000 cu. ft.	1000 cu. ft.	1000 cu. ft.	1000 cu. ft.
838,900	1,241,730	634,880	12,463,510
	1,992,900	777,450	5,808,975
14,040,528		2,584,200	39,619,728
14,879,518	3,234,630	3,996,530	57,892,213
67,943,000	14,770,000	18,259,000	264,358,000

Accessibility of Present Supplies

Accessibility is a most important factor which must be con-

sidered in connection with a discussion of forest resources, but it is very difficult to determine, since accessibility is dependent on conditions which are constantly changing, such as transportation facilities, methods of exploitation, market standards, the price of the products, cutting regulations, etc. Timber, which a few years ago was considered of no commercial value, has been made accessible by the building of railways or the improvement of water-routes. The rise in the price of forest products has increased the amount of timber, which is accessible, by permitting greater expenditure in exploitation and by encouraging the sale of lower grades which formerly could not be marketed at a profit. There is still room for much greater economy in utilization, for in the manufacture of lumber at present only about one third of the wood content of the tree is utilized, and the other two thirds is wasted in the woods or in the mills. The opening up of new industries, such for instance, as the pulp industry, has provided a market for woods which were formerly considered valueless. Before the establishment of pulp mills in British Columbia, western hemlock was of practically no value and now over 200 million board feet of this wood is cut annually and hemlock stumpage at the Government sales brings over \$2.00 per 1000 B.F.

Several of the governments impose restrictive cutting regulations in their timber sales and these, while in the interest of future production, reduce the amount of timber available for immediate utilization.

It is impossible therefore, to state with any degree of assurance, what proportion of our timber resources should be classified as accessible and there is room for great differences of opinion on this subject. With this understood I would venture an estimate that under the present transportation conditions, market standards and regulations, the following amount of saw-material might be exploited—

TABLE V.**Accessible Saw-Material**

	Softwood		Hardwood		Total	
	Million Ft. B.M.	1000 Cu. Ft.	Million Ft. B.M.	1000 Cu. Ft.	Million Ft. B.M.	1000 Cu. Ft.
Eastern Provinces	75,000	16,425,000	10,000	2,190,000	85,000	18,615,000
Prairie Provinces	10,000	2,190,000	3,000	657,000	13,000	2,847,000
British Columbia	160,000	35,040,000	600	131,400	160,600	35,171,400
Total	245,000	53,655,000	13,600	2,978,400	258,600	56,633,400

On the same basis I would estimate the accessible pulpwood supplies in the Eastern Provinces to be 250 million cords of spruce and balsam and 70 million cords of jack pine, hemlock and poplar; a total of 37,440,000,000 cubic feet; in British Columbia 125 million cords of spruce, balsam and hemlock which are the principal woods used, and 10 million cords of lodgepole pine, poplar and cottonwood, equivalent to 15,795,000,000 cubic feet.

In the absence of any pulp industry in the Prairie Provinces, it is difficult to express as to the proportion of the timber which could be used for this purpose. The development of a pulp industry is dependent on other factors than a supply of timber and the transportation charges on rail shipments of pulpwood to existing manufacturing centres would preclude the immediate use of much of the timber for pulp which could be profitably utilized in local mills. Most of the timber in these provinces is of species which can be used in the manufacture of pulp, and there are undoubtedly large amounts which may be available for this purpose when a market is provided for the wood.

The supply of easily accessible timber, especially of the more valuable species, such as white pine, is rapidly diminishing, and each year the lumbermen are forced to go back farther from transportation, to operate lighter or more difficult stands, and to take out lower grades of material.

FOREST CONSUMPTION

Statistics as to the cut of all forest products are secured only in connection with the decennial census. The data collected for 1920 shows the cut approximately as follows:-

TABLE VI.**Products for the Forest in 1920**

Type of Product		Used Volume 1000 Cubic Feet	Equivalent in Standing Timber 1000 Cubic Feet	Value
Under State Control and Other (No division possible)	Lumber	4,298,804 (M.B.F.)	359,067	\$168,171,897
	Lath	762,031 (M.Pcs.)	10545	5,248,879
	Shingles	2,855,706 (M.Pcs.)	23,798	14,695,159
	Square timber, exported	45,510 (M.B.F.)	3,793	1,899,444
	Logs, exported	65,505 (M.B.F.)	5,459	1,836,315
	Railway Ties	16,845,000 (Pcs.)	50,535	13,405,473
	Posts	14,136,397 (Pcs.)	21,204	1,396,751
	Poles	571,111 (Pcs.)	5,711	655,467
	Pulpwood	4,024,826 (Cords)	362,234	61,183,060
	Firewood (Cut)	8,656,669 (Cords)	779,100	37,436,000
	Miscellaneous, other		35,740	6,754,974
TOTAL		1,657,186	2,616,131	312,683,509

It is with great diffidence that I venture to make a statement of our resources in softwood timber. So little is known of a vast extent of the timber land, or for that matter of the timber at the doors of the industries, that at best I can give only an estimate based on a compilation of information supplied by the various forest authorities, lumbermen and others who have specific information concerning certain portions of the Dominion. It must be admitted at the outset, that the estimates are based on scant and often conflicting data, but believing that it is in the interest of forestry, not only in Canada but in the Empire, to crystalize the vague generalities in which we have indulged, into concrete figures, I offer the results of my compilations, reserving the right to amend the figures when more accurate information is available.

I may say that it is very difficult to convert our factors of measurment into cubic feet, especially since the used volume is often very little indication of actual volume of standing timber, but I have used for the most part the conversion factors used in the United States, which were based on considerable study. These will be found on Page 37, in the "Forests of Canada".

Roland D. Craig: Ottawa

The amount of timber utilized represents only a portion of the drain on the forest resources of the country. Fire, insects, fungi, wind and wasteful operations result in the destruction of several times the amount of timber annually used by the industries.

Fire and Insects Work Havoc

Though of late years with the development of more efficient fire protective organizations, more complete information has been secured as to the damage done by fire, the records are still incomplete but for the years 1918-1922, and it is estimated that, at least, 790,000,000 cubic feet of merchantable timber has been destroyed annually by fire. Most of this was coniferous.

The loss due to insects is much greater than has been generally realized. During the last ten years the spruce budworm has destroyed, at least, 100 million cords of pulpwood in Quebec, and 15 million cords in New Brunswick. This would be sufficient to provide for the present annual cut of pulpwood in the whole Dominion for a period of 29 years. The larch saw-fly 30 to 40 years ago killed practically all the larch or tamarack from the Atlantic coast to the Rocky Mountains. Just how much of this valuable timber there was, is not known, but it was probably not less than 30 million feet, board measure. Of the other numerous insect enemies of the forest, various species of bark beetles and borers are perhaps the most destructive, and are annually inflicting serious loss to our forest resources.

Loss from Fungi—Exploitation Waste

That the loss due to fungi is serious, is apparent to everyone who handles forest products. The butt rot in balsam and other forms of rot which attacks the trunks of trees or nearly every species, not only causes the destruction of countless trees but reduces the quality of the products. The white pine blister rust, a disease imported from Europe, is doing a great deal of damage in the United States, and promises to become a serious menace to our pineries, especially the young stands. It is already thoroughly established in the coastal region in British Columbia, and though it has not yet been found on the pines in the northern part of Ontario and Quebec, there is danger of a serious infection at any time. It is becoming recognized that fungi are perhaps as destructive as either fire or insects.

Another source of loss is the waste in operation. Frequently up to 25% of the stand is left in the woods in logging operations to become a prey to the almost inevitable fire or to be windthrown. In the manufacture of lumber a further loss of from 30 to 40% of the wood content of the logs occurs. One of the most prominent features of a sawmill in America is the refuse burner.

Time Supplies Will Last in Canada

In estimating the time our timber supplies will last; one must consider not only the capital stock but the present consumption and loss as has been the usual practice. Accessibility, growth and future markets are important factors. It must be pointed out too, that it is quite probable that our estimates of mature timber may be reduced when a careful inventory is completed. There is a very considerable amount of timber for which, as far as we can see, there is little chance of operating profitably in the near future. The virgin timber within the reach of the established industries is certainly rapidly becoming depleted, as evidenced by the long drives, sometimes occupying even two and three years, and the constantly increased cost of woods' operations. The situation has led several of the pulp

companies to undertake reforestation measures. To an industry entailing large capital expenditure such as the pulp and paper industry, the maintenance of appurtenant supplies of timber is of paramount importance.

To offset the annual drain of our forests, there is the natural growth. There is very little information regarding the rate of growth of the different species under the varying conditions of the forest, and this can be determined only by intensive research. However, since there is no increment in mature virgin stands and the cut over and burned-over areas have been treated in such a careless manner, it is extremely doubtful that the growth throughout Canada is keeping pace with the annual depletion.

Increasing Demand for Forest Products

There is every indication that the demand for our forest products will increase more rapidly in the future than in the past. With the increase in population our home markets will demand more wood.

The forestry situation in the United States indicates that there will be constantly increasing demand from that country. The original forest area of 822 million acres has been reduced to 463 million acres of which only 137 million acres carries virgin timber. This is being cut at the rate of 5.5 million acres per year, so that, exclusive of growth, there is 25 years supply in sight. The standing timber is being cut at the rate of 26 billion cubic feet per year, which is more than four times the estimated annual growth, and the timber of saw-material size is being cut at the rate of 56 billion feet, board measure, per year and the growth of such material is estimated to be 9.5 billion board feet per annum.

From a great exporter of forest products, the United States has become a large importer. Already Canada supplies in the form of pulpwood, pulp or paper, two thirds of the newsprint used in the United States. Our exports of wood, wood products and paper to the United States in 1922 were valued at over \$175,000,000.

With a constant increase in population and decrease in supplies of timber, the United States will provide an expanding and profitable market for the products of our forest which we should be in a position to take advantage of.

Canada is the principal source of coniferous timber in the British Empire, and with the growth of trade within the Empire, our forests will undoubtedly play an important part. In the Orient, South America and South Africa, important markets for Canadian woods are being developed.

Vast Area for Reproductive Purposes

There is in Canada a vast area, over six hundred million acres, which though of little or no agricultural value, is capable of growing excellent stands of softwood timber. If the forests on this land were maintained in a productive condition and effective protection from fire provided for the young growth, as well as the mature timber, it would be possible with the most rudimentary silvicultural management to produce in perpetuity three or four times the present annual cut. Under the existing conditions, however, it is doubtful if any material increase in the forest industries is justified, at least until more of the young, second growth has reached maturity. Though there are portions of the Dominion where the forests have not been extensively exploited in which increased utilization is desirable, in the older districts where operations have been conducted for some time, the scarcity of mature timber is already felt, and in many places where the forests have supported thriving industries, production has already had to be curtailed or entirely suspended as a result of not providing for a balance between growth and use.

Canada Has Not Only the Moral Right But it is Her Bounden Duty to Place an Embargo on Export of Her Raw Materials

By Fred. Brown, Fort Frances, Ont.

Fred. Brown, Fort Frances, Ont.

Judging from recent articles in the press during the past few weeks the pulp and paper interests of the United States are greatly disturbed over the proposed embargo on raw pulpwood. In true characteristic fashion the representatives of the so-called vested rights are trying to deny to the Canadian people the rights to protect their remaining forests to the best interest of the present and coming generation. Having started out and acted on the principle that the public must get rid of its holdings as soon as possible, the Eastern and Northern States are admittedly very short on pulpwood and saw logs; especially is this true of New York, New England, Pennsylvania, Michigan, Illinois.

Having accomplished the unbelievable in a comparatively short time, and having described the honest efforts of conservationists for protection and perpetuation of the forest wealth as dogmatic, unpracticable and idiotic, the operators of pulp and paper mills in these States are attempting to deny to Canada the right to deal with its natural resources as the people of Canada see fit.

Prompted by the principle, that it is better to destroy our neighbors' forests than to go to the rather heavy expense of reforestation, protection and cutting for a sustained annual yield; the charge is made in the press that Canada is prepared to put an embargo on pulpwood solely for the purpose of giving Canadian labor the wages now earned by the workers in the United States.

This is one of these half truths that are more dangerous than a deliberate falsehood. No doubt in the world, Canada has not only the moral right but it is her bounden duty to protect for her sons and daughters to the fullest extent of her ability the raw materials which, by their conversion, furnish them with a livelihood. Canada, in order to keep her working men and the influx of population, must keep her forests green and productive.

First, now and always first is the consideration of the nation's common weal. Surely, the exponents of the vested rights cannot have the cheek to tell the people of Canada that they must let go on unrestricted the destruction of her forests, just because Northern States, Eastern States, and New England did not heed the warnings of such eminent and patriotic citizens as Dr. Fernow, Gifford Pinchot, Dr. Reeknagel, et al, and made ducks and drakes out of the forestal patrimony.

Would any of these operators on Canadian soil undertake to regulate cuttings on a 110 year rotation? Would any one of these operators agree to a cutting policy of annual sustained yield? No—they would not; they would argue that the cost of cutting for an annual sustained yield would be prohibitive. They would insist that conservative forestry is not essential, they would try to convince us by all the wiles of rhetoric that our pulpwood supply is unlimited, and that they have as good a right to it as the people of Canada. They would go and rob the country by wasteful logging methods of millions of dollars, leaving in the woods material that could be used if Canadian pulpwood would be manufactured at home—not mentioning the fire hazard and the debris left.

An embargo on Canadian pulpwood will be one of the greatest blessings in disguise for those States affected. As long as pulpwood can be bought cheaper than it can be grown at home, none will be grown. This much is proven by the fact that the area in the United States where trees once grew, but which is barren to-day, is greater than the combined lands of Belgium, France, Holland, Germany, Switzerland, Portugal and Spain.

An embargo will have the effect that planting and conservative Forestry will be speeded up tremendously all over the United States.

For Canada the embargo on pulpwood is not a question of retaliation for the Fordney-McCumber Tariff. It is simply and purely a measure of protecting the national life. For this reason alone it would be better if the forests would be owned by the common weal, and the Dominion would be better fitted for the practice of forestry than the provinces.

The advocated retaliation on the import of coal and other necessities are to all thinking Canadian nursery stories. The United States have coal for sale and are in the market to sell. Canada's pulpwood is to all practical purposes exhausted. Should the United States retaliate with an embargo on coal, Canada can produce her own coal and develop an industry which has up to now received more or less the treatment of a stepchild. Would it not be to the interests of the American investor to have these Canadian mines working full time and to have them fully developed?

What Factory Equipment Should Retail Lumber Dealer Install?

By WM. ALEXANDER

I put this question to a number of retailers recently, and find that most of them consider it necessary to have some machinery. How much it is advisable to install depends almost entirely on the location of the yard. In the smaller communities the situation is much different from larger cities. Retailers in cities are usually able to have their machine work done at mills close by their yards at charges that they would be unable to reduce by undertaking themselves. On the other hand, some retailers located in the suburbs feel that it is essential for them to have some equipment in order that they can do their own work.

Let one of these speak for himself: "I am starting up in a new district which is growing rapidly, and feel that I could not conduct my business as profitably as I do now if I had no machinery. When a customer comes to my yard with a bill of material and I am able to give him an immediate figure on his entire bill and assure him that he can secure prompt delivery he feels at once that there is no need for him to go further. Were I able to quote him only on the rough lumber he would in all probability take his rough lumber order to the same place as his finished stuff. True, I can buy finished material in a wide assortment, but I cannot buy in car lots, each kind of trim as some of the larger yards do, and even if I take advantage of the service rendered by some of the large wholesalers to buy a car of assorted trim, (which I frequently do), I may run out of one particular item. That means sending my customer somewhere else for that item, or obtaining it for him. I cannot always wait for the arrival of another car, and I may not be in a position to buy another car, being stocked up sufficiently on everything but that one item.

"That is why I find it profitable to have machinery. At least, I should say that is partly where the profit lies. I also find that I can frequently buy No. 1 and 2 mill culls from firms, that experience has shown me give me a good grade, in which there is considerable clear stuff that can be worked up on a moulder into profitable selling stock. I often find that there is as high as forty per cent. clear stock in the No. 1's. I am able to rip good clear stock from the edges for mouldings, and there is a lot of it suitable for door jambs, etc.

Wherein the Moulder is Handy

"I buy all my dimension, sheathing and flooring already run. I also buy Georgia pine and chestnut trim, but for my class of trade I have to be careful not to understock on these items. By having a moulder I never have to turn a customer away, because if I happen to be without what he wants along these lines I can make it for him.

"My trade calls for a lot of fir trim, but while I buy this material ready run I am always careful to have a few thousand feet of rough fir on hand to run any material I may be out of. In short, I would not be without a moulder. I may be losing money on the actual running of my stock, but I am satisfied that, by having it, I am getting a much greater volume of business than I would be without it and, therefore, making money on the extra volume.

"I would like to add that I was successful in getting hold of a first class moulder hand, one who has had experience in some of the big mills, but who prefers to work in a smaller shop. I just have two machines, a moulder and a power feed saw, which are operated by a twenty h.p. motor, but I plan to add one or two other machines as I see I can use them to advantage. At present I haven't any definite idea which machines these will be."

The equipment just discussed by this retailer may not constitute a factory in the generally accepted sense of the word, but I consider his comments well worth recording. He has had many years' experience operating yards for other men and is now working up a business for himself. He

studies his trade closely, and is developing an outfit to suit that trade. His judgment is worth paying attention to, and many readers of this paper may be catering to a similar class of trade.

A retailer located in a town some distance from Toronto has a plant equipped with a twelve inch moulder, power feed rip saw, surface planer, six inch moulder, jointer and cut-off saw. He has no opposition in the town itself, but there are well equipped plants in places a few miles distant. These firms encroach on his trade to a considerable extent, which makes it absolutely necessary for him to maintain a planer. Asked if his plant paid him he replied that he had never looked at it in just that light, because he figured that if he did not have a plant he would not be able to stay in business. He receives numerous requests to figure on jobs consisting almost entirely on detail stock. Plainly, if he did not have the necessary equipment to handle this class of work he would only get the leavings, which would not be sufficient to provide a living. His trade in stock finish is not heavy enough to warrant him buying in other than mixed car lots. He also finds himself occasionally out of one or two particular items, with the demand not great enough to buy a car. By having machinery he is able to manufacture the stock called for and give prompt delivery.

No Customer Wants Two Accounts

Several other retailers in towns served by two yards stated that they were forced into installing a plant because their opposition had one. If a bill of material was submitted to them they could not pick out the items they wanted to supply and let the customer go elsewhere for the rest. A customer would not want to maintain two accounts, and besides he could not expect to get the same service by dividing the material for a job between two yards.

The two yards I have in mind both have about the same equipment, with one difference that I will deal with shortly, a moulder, twelve inch machine, for large stock, six inch for small mouldings which cannot be run to advantage on the big machine, power feed rip saw, surface planer, bandsaw, hollow chisel mortiser, variety saw table, tenoner, sash and door clamp and turning lathe. The difference that I spoke of is a big matcher, and the firm that have it are seriously considering getting rid of it. In its place they contemplate installing a sander. They are undecided whether a drum sander or a belt sander would best serve their purpose and have talked of putting in both. One machine they both have that I omitted to mention is an elbow sander for sash.

Whether it is profitable to bother with sash or not is a question that has troubled a good many retailers. Practically all admit that there is no money in them, and one retailer, whom I questioned on the subject, stated that he had got rid of his sash machines. Others, again, say that for all the additional machinery it requires to make sash it is just as well to keep it if you already have it. There are times, they say, when the customer cannot be induced to accept stock sizes and a delay might cause the buyer to take his requirements elsewhere if the yard could not furnish them promptly. Special sizes can be secured from the large mills, but it takes a few days to get them.

Favors Buying of Sash Outside

Those who are not in favor of making sash at all state, on the other hand, that if the order for sash is placed along with the other stuff that even special sizes can be obtained before the building has advanced to the stage where it is necessary to fit the sash. This sounds like a very logical argument. After weighing all the evidence for and against I would be reluctant to advise any retailer to bother with sash equipment. The big firms catering to this business are equipped to handle it in a manner that should make it unnecessary

for any retailer to add to his worries by attempting to make his own. If you are buying sash you know what they are costing you, which is something the retailer making his own in a small way cannot always be sure of.

There is another angle of the manufacturing end of the retail lumber business that I came across recently. A retailer in a town where the opposition had a mill, found he was up against it, and being steadfastly opposed to putting in machinery, got around it in an interesting manner. His reason for not wanting to put in machinery was that he did not know anything about it himself and didn't want to have to depend on hired help when he was in a position to know whether they were putting it over on him. There was a competent mechanic living in the town, and the retailer induced him to open up a small shop, furnishing some financial assistance. He pays for having his work done, but is a shareholder in the shop enterprise. He says he does not anticipate any large dividends, but feels that if the shop is soaking him for doing his work he will get some of it back in profits. In this way he has no responsibility on the machinery end of the business, and is fairly well safeguarded against overcharging. This seems like rather a good arrangement for the retailer, more so than for the mechanic, but it is the retailer we are considering.

Local Conditions Must Govern Decision

His own particular trade must govern any retailer's decision on the question of operating a plant. He must take into consideration where he is located and whether he can get his machine work done efficiently and economically in the vicinity of his yard. The point I want to make will no doubt be clear. Avoid putting in a plant if you can. If you can have the work done for you at a reasonable price and can get satisfactory service, why invest your money in a plant? But if conditions are such that you must put in machinery to conduct your business profitably, the information regarding what others are doing will no doubt be of some help to you. Figures of savings in one plant, if such were available, would rarely be of use to any other retailer, and would more than likely be misleading.

While I have suggested keeping away from the installation of machinery if possible it is only an odd retail yard that is so fortunately situated that it is able to do this. The size of the outfit to be put in, then, will depend on the volume of business done and the requirements of your customers. A power feed rip saw is the most essential machine. It is difficult to get along without one of these because the amount of sizing there is to be done in any yard, is sufficient to justify the installation of one; at least, that has been the experience of every yard that I am acquainted with. New yards starting up are only operating a short time before they decide they cannot get along without a saw.

The next essential, if other machines must be added, is a moulder. It is generally agreed that a twelve inch machine is the best suited to the requirements of a retail yard. This machine will make all kinds of mouldings, and will dress stock four sides by putting straight knives on the heads. Some firms get away without putting in a surface planer by doing their surfacing on a moulder, using only one head if the stock has only to be dressed on one side. It will nearly always be found, however, that a planer is worth while having. If a moulder is set up for mouldings it is quite a job to take off the knives and put on straight ones for surfacing, whereas a planer is always ready to dress any boards that may be required. If only two or three boards, or one as often happens, are to be dressed it would certainly not pay to bother trying to do it on a moulder.

The Rip Saw, Moulder and Planer

These three are the really essential machines. Sometimes the moulder can be dispensed with if the demand is all for stock patterns, which can be bought more cheaply, as a rule, from one of the large firms specializing in that class of stock. If a planer and saw are installed, however, it is just as well to have a moulder. The average retail yard has not enough work to keep a machine hand on those two machines and he might as well be earning some money by

utilizing some of the low grade stock, as mentioned at the beginning of this article, for items that will fetch a higher price.

A cut-off saw of some kind is almost an essential. There are three types in use, the swing saw, familiar to all, the lightning cut-off saw, which is a table saw on which the saw is brought forward by the operator's foot, and the roller table cut-off saw which, as its name implies, is a machine having a table operating on rollers. Part of the table is stationary, and the other part rolls. The stock is laid on the roller table and the table pushed forward past the saw. This is a very handy machine, in some respects preferable to the swing saw. However, the swing saw will be found to fill the bill, and it is cheaper.

Whether a bandsaw should be added or not must depend on the amount of bandsawing to be done.

A jointer, or buzz planer as some choose to call it, is handy around a shop if it is desired to straighten the edge of a board or to take the wind out of one before putting it through the surfacer. Here also the man putting in the plant must be guided by the class of work he is doing. For the ordinary retail yard catering to the building trade I think this machine would stand idle most of the time.

A variety saw table for ripping and crosscutting will be necessary if it is proposed to make frames, and do other general jobbing work. This is another case where the class of work to be done must be the deciding factor.

Believes Electric Power is Best

This outfit of machinery will be about all that the retail yard will require, unless there is enough small mouldings to be made to justify the installation of a six inch moulder. I think this can be done without though. If anything more elaborate is desired in the way of a plant than this it will be for a large factory, and anyone going in for a large factory will have his own ideas based on expert knowledge of the work he proposes to tackle.

On the question of power I think the retailer would be well advised to stick to electric power. A boiler and engine, which is sometimes suggested on account of the fuel likely to be available from shavings and cuttings, involves considerably more of an initial expenditure than motors. A much more substantial building is required, and the expense of a fireman and engineer would, I think, more than offset any saving.

One suggestion I would like to offer if motors are to be installed, is to construct a shavings bin a few feet distant from the factory and at wagon height from the ground so that shavings can be carted away easily. I have seen this idea in several yards and it appears to be a good one. The wagon is backed up to the bin and the shavings loaded into the wagon by means of a chute. Usually it is not a difficult matter to find plenty of persons willing to take the shavings. In most places they get them for the hauling.

The shavings are carried to the bin by the blower system. It is always advisable to install this equipment as it keeps a plant much cleaner, permitting men to work to better advantage, and it greatly reduces the fire hazard.

Furthest North Sawmill is Run by Police

A portable sawmill is operated by the Royal Canadian Mounted Police at Aklavik, on the delta of the Mackenzie river. It was purchased primarily with the intention of squaring logs for new police posts in the Arctic, but lumber is also cut, and if the guardians of the North were to fill all the orders received, every Eskimo along the Arctic coast would be possible customers, and they would not object if fifty per cent. was waney or "thirds."

The mill is run by Sergeant Anderton, who prior to joining the force, was a millwright in civil life. Logs are procured in the delta country, but owing to the fact that these are wind twisted, further supplies will come from the Peel river, one hundred miles distant.

Though far beyond the Arctic circle the spruce here runs well up to fourteen logs to the thousand, and makes excellent lumber.

Says Planing Mill Eats Up All Profit

Made on the Lumber End of the Business

By Chas. P. Lucas

When a retail lumberman starts to consider the installation of a factory to handle his own work he would be well advised to let it remain in the consideration stage for a considerable period. There are times, of course, when no other course is open to him, but in nearly every town of any size it is possible to find someone with an outfit of machinery who will do the work at a minimum charge. There are always mechanics who put in some machines and buy one or two cars of lumber with the expectation of furnishing all the material required for the building trade, but who fall down for lack of business ability and, eventually, are glad to accept the mill work offered by some progressive retailer who has started up beside them.

The dividing line between the businesses that we know as planing mills and retail lumber yards is often hard to find. Generally speaking, however, it will be found that the planing mill was launched by a man with machine experience who started with a factory and attempted to work up a retail yard, many times, it must be admitted, he has met with success, whereas the retail lumber yard started with a stock of lumber to cater to the requirements of the community for all kinds of lumber, and perhaps, found after a time, that it was necessary to install some machinery in order to function properly. That means that one man started out with the ideas of a mechanic and the other with the viewpoint of a merchant.

It has been my observation that the fellow, who started out with the viewpoint of a merchant, to render a service to the community by carrying a stock of rough and dressed lumber for all classes of buildings, invariably surpassed the fellow who started with a planing mill, the result being that the planing mill had to be satisfied with the odd jobs of the town and the work the retailer gave him.

Why Tie Up Money in Plant?

If the retail lumberman can get someone else to do his machine work for him at a fair price he is much better to have it done that way than to put in a plant himself. If he puts in a plant he can very easily tie up ten or fifteen thousand dollars. Then he must get a competent foreman and machine operators. When he acquires a plant and organization of this kind he will have to keep his nose to the grindstone to dig up enough work to keep the equipment busy. And very often he will decide to make certain kinds of material in order to keep the plant active when he could buy the goods much cheaper than he could manufacture it.

I was in the office of a retailer the other day who consistently refuses to put in machinery other than the one machine he has, a power feed rip saw. He was making a comparison between his business and that of a competitor close by who operates a good sized plant. The plant in question must represent an investment of, at least, fifty thousand dollars, and the staff necessary to operate it will mean a stiff pay roll every month. My friend the retailer was pointing out that they do a greater volume of business than the firm with the big plant

and often beat them out on a bill of material because they are able to furnish better machined stock. He was wondering, therefore, where the big plant gets off when his business is just paying a reasonable profit.

Gets Large Quantities of Dressed Stock

It must be losing money. If the yard that has no pay roll other than yard help to meet, and no investment in machinery, is only making a fair profit it seems reasonable to suppose that the other fellows must be losing out. The stocks carried by the two firms are about equal as to quantity, but a greater proportion would be dressed lumber and finish in one case than the other, which would not make such a great amount of difference in the sums of money tied up in stock by the two yards. It seems obvious, therefore, which is the most desirable basis on which to conduct the business.

It so happens that the amount of business done in the district where these two yards are located is quite large. It is possible, therefore, to buy milled stock in large quantities. That is the reason the retailer without the machinery pointed out that he was able to get better milled stock. The work is done at the large mills where the volume of work turned out enables them to have the very latest equipment obtainable. The firm with the plant, on the other hand, while having a pretty fair outfit of equipment, has not the volume of work to justify them putting in the same machinery as the big mills located in close proximity to the sawmills. Then there is to be taken into consideration the difference in the freight rate between the rough and dressed stock. The firm that brings in the rough lumber to machine themselves is paying the higher freight rate.

My advice to any retailer is to have a good look around to find out if he cannot get some mill to do his special stuff for him before undertaking anything in the way of putting in a plant. Those retailers without machinery use all the art of salesmanship at their command to persuade the prospective customer to buy stock patterns, and as they have some excellent arguments on their side, they are invariably able to sell their man material they can furnish from stock. If the customer insists on special patterns then the retailer can nearly always have the work done by some planing mill.

In some of the larger towns and cities there has come into existence a class of planing mill that handles the machine work of retail lumber yards. I know of one firm that formerly operated a large mill in conjunction with their yard, only to find out it was a losing proposition, and closed it up. They sold off all of their machinery and most of their stock of lumber, but the man, who was left in charge during the selling off period, was able to induce the directors to continue to operate the place as a retail yard. They now have all of their machine work done by a small mill about a mile distant. The stock is trucked there and back, and they pay the mill so much per hour for doing their work, the bill being rendered monthly.

The yard is now on a paying business, and the man who does the machine work was telling me a few days ago that he is making a nice thing out of it. Of course, he is not doing their work exclusively. The reason they lost money on the first venture was that they had a mill out of all proportion to the amount of business they were doing. But they are better off now than they would be if they had machines of their own. They simply pay for the time the machines are operating on their work, and they have no responsibility if the machines break down. They are in the position of the fellow who said he preferred riding on the street car to driving his own car, because he just paid his fare and if the street car broke down he did not have to fix it, or pay for the repairs.

Too Large a Mill for Work Done

I have been in planing mills and retail yards in many parts of the country, and, if I intended starting a yard tomorrow, I would do a lot of figuring in an effort to avoid putting in machinery. If I could not get away from it I would, at least, go very slowly. It would likely be necessary to put in a saw of some kind for ripping, but that would be the extent of my equipment if I could possibly get around the matter in some fairly economical way.

Even in putting in a saw I doubt if I would go to the expense of a new power feed rip saw. Often one can pick up an older type power feed saw second hand for a low price. These old timers are not much good for anything else but a lumber yard on account of the distance between the feed rolls. They will not rip short stock. This is no drawback in a lumber yard, however, because there is no short stock to rip, that is nothing under four or five feet and these saws I have reference to will generally handle anything as short as two feet. In many woodworking plants their saws must handle stock as short as eight inches. Often they throw out machines that will not do this and the lumberman, if he has his eyes open, can get a bargain.

Rip Saw is Useful for Sizing

It is difficult to get away from putting in a saw, and if this must be done it is the part of wisdom to get a power feed saw. Often by looking around one of these can be secured for about the price of an ordinary rip saw. A saw is very useful for sizing, and most men want studding and joists sized now-a-days. Any retailer knows the variation that frequently occurs in the widths of two by fours and two by eights. I saw the sale of a fourteen thousand dollar house lost about a year ago owing to the fact that the plaster on the walls was all cracked through the neglect of the builder to have the studding sized. Some builders think they can save money by buying their lumber from a wholesaler in car lots, but there are several little services the retailer performs for them when they buy from him that saves them money in the long run. Sizing is one of them. In this particular case the variation in the widths of the studding must have been three-quarters of an inch in

some cases. The lather nailed the laths on by bending them in to conform with the joists. The contour of the wall was anything but a straight line, and when the laths started to spring back to their natural shape the plaster cracked.

Therefore, nearly every retailer has a saw for sizing. It is a service he performs for his customers. In addition to the sizing there are many ways a saw can be used profitably, so many in fact that they cannot be enumerated. Sometimes a yard will be long on two by eights and short on two by fours. With a saw this can soon be rectified, and the situation tided over until a new shipment of two by fours is obtained. Many times defective boards can be ripped up into a usable product if a saw is at hand.

But beyond a saw I do not advise retailers to venture unless they are forced to take the step. The minute they do they increase their overhead, and their troubles. It does not require a skilled man to take charge of a saw. There are saw makers who will keep your saws in shape for a minimum charge, so all the operator has to do is shove the stock into the machine. The ordinary class of yard help can do that satisfactorily, but it is well to caution them carefully against getting mixed up with the saw. With a power feed rip they have no excuse for getting their hands near the saw. The feed rolls take hold before the stock gets near the saw, and once they take hold the opera-

tor has nothing to do but get another board ready to start into the machine.

Why Some Mills Are Unprofitable

There are many lumber yards where a mill is in operation and the owners wish they had never been induced to install it. It is only fair to state, though, that some of these mills are unprofitable because the owners showed poor judgment in purchasing their equipment. I know of one such in an eastern Ontario town with a population of about ten thousand. The first machine installed in this plant was a fast feed matcher, costing in the neighborhood of seven or eight thousand dollars. The rest of the equipment was selected on the same scale. This mill had about as much use for a fast feed matcher as a cat would have for two tails, and yet they bought it in spite of the fact that an opposition dealer in the town had a similar machine standing idle in his shop which he wanted to sell. When you mention machinery now to the owner you require an accident policy in your pocket. He points out that the machinery, particularly the big matcher, has never been used more than about one day a week, and that the mill eats up all the profits he makes on the lumber end of the business. This was simply a case of a man putting in an outfit of machinery on the say of a salesman, or without making a study of conditions.

Practically all smaller mills are getting

away from the high speed matcher idea now-a-days, and giving more attention to the smaller, slower feed machines. There is a demand for an efficient machine of this type, and, at least, one of the Canadian machinery houses has put one on the market.

Pushing the Sale of Stock Patterns

The opinion is general among retailers who have planing mills that they are not a money making proposition, and while some of them maintain that they are so situated that they must have machinery to take care of special work, it is just a question if they would not be better to get rid of their equipment and use their efforts to persuade their customers to make use of stock patterns, getting any special work that a customer absolutely insisted on done elsewhere. This can usually be done, without sacrificing much in the way of service in delivery. In these days of motor trucks and fairly good roads it should not be such a difficult matter to have a special job done at a nearby mill, even if it is a few miles away. But the big idea is to keep the special stuff down to a minimum by pointing out to a customer what he saves by buying stock material. He does not have to pay for the time necessary to make special knives and set up the machines. This argument nearly always makes an appeal to the customer's reason, and pocketbook.

Hysteria of Price Cutting is Most Pitiable

By Chris. M. Anderson.

Of all the ills and afflictions that beset business men (and a list of them would rival that of the diseases of the human body), there is none so pitiful as price hysteria. Building material dealers seem to be particularly susceptible to this ailment, though forms of it are sometimes noted in other lines of business. It is, in effect, a breakdown of nerves, and the patient loses control of his usually good facilities. Some one man in an organization gets the "bug" first. He carries it to others with whom he is associated. Soon it breaks out in the whole community. There is little that one can do to stop it. If left to its own course, the disease will usually play itself out in a few months—but what devastation and loss it leaves in its wake!

It starts something like this: Someone scares himself into believing that the building business is going to the dogs; that every other dealer is cutting prices; that unless he sacrifices every cent of possible profit, cuts down his expenses to the minimum, reduces the wages of everybody who works for him, and gives prices that he knows are not profitable, he will have to close up his yard and quit the business. Every time a would-be customer tells him that he is "too high," he takes another slash in order to land the business, if possible. He cuts and slashes, and keeps on losing to someone else, it apparently making no difference how much he cuts the price. He worries and frets and stewes, and tells his trouble to every salesman who comes along—how some other dealer cuts prices and "does" him out of nice bills. He explains that he knows all the other dealers are after his goat, and how they started it, he being merely a poor sufferer in the process of being ground beneath the millstones of the larger corpora-

tions. At home he tells the wife how the other dealers are trying to drive him out of town, and otherwise worries the dear lady whose life and interests are so closely bound up with his own. Perhaps he thumps his fist on the table and loudly protests that they shall not do it. Or he may merely throw out his hands in a gesture of helplessness and say "What's the use?" Now, this state of mind is actually hysteria. It is the result of overwrought mind and imagination—with fear added.

The dealer has probably been up against hard competition and endless nagging on the part of the trade about high prices. He has fought it—hoping earnestly for a change to lower price level. He has seen business dropping off. "Going to the other fellow," he concludes in anxiety. What shall he do? What can he do? Eventually, the situation "gets his goat." He catches the fever of price hysteria, and off he goes on a price-cutting spree. Now, if the truth were known, these same "other fellows" were probably as worried about business as he, for they too had seen sales drop off. They were not getting the business that our friend thought they were. The fact of the matter was that nobody was getting it. Most of it never got beyond the "figuring" stage. There was, therefore, no need for excitement. The dealers scared themselves and tried to put themselves out of business by cutting their own—and the other fellow's—throat.

By and by the hysteria spends itself, and the mind again becomes rational. The spree has served as a sort of "pop-off valve" emitting the pent-up energy and feeling. Now the patient—for by this time he is indeed a patient—feels weak and wobbly, particularly

in the region of the pocketbook. He sees some thing in a clearer light. For one thing, he realizes that sales are not always an index to prosperity. Sales made without profit are sales made at a loss. There is no intermediate ground. He has seen, too, that even at cut-throat prices, he has not been able to increase materially his percentage of the business of the community. All he has done has been utterly to demoralize the trade for himself and everybody else. As far as is standing in competition, the situation resulted in a "status quo."

Most of us know how easy it is to get into the way of thinking that our competitors are trying to get the best of us, and that we must cut prices. Only the sensible advice of some older heads has kept us from "jumping off the handle" at times. But let's not let this price proposition "get our goat." Let's not get scared. Let's not play the fool. Ask fair prices, deliver good materials and helpful service, and believe that you are rendering an essential service to your community—that's the best inoculation we know of for the prevention of price hysteria.

The Man With a Hobby

A hobby is neither a habit nor a dissipation; it neither scatters nor wholly wastes effort. It concentrates and conserves at the same time that it exercises and develops the faculties. Chosen properly it increases the number of social contacts, enlarges the interests and warms the sympathies. The hobby introduces its devotee into new environment, calls into play different faculties and gives direction to latent aptitudes. It makes him a better business man, a better neighbor and a better citizen. The man with a hobby has an antidote for the worries of business.

New Brunswick Lumbermen Object to Levy

Large Deputation Waits Upon Premier of the Province and Urges Several Changes in Workmen's Compensation Act--Assessments Have Borne Heavily on Industry

Angus McLean, Bathurst,
President of N.B. Lumbermen's Assn.

was necessary. Consequently, a general meeting was convened, and representatives of over fifty lumbering concerns from all over New Brunswick attended.

The President, Mr. Angus McLean, outlined the history of the Association's endeavors for the past few years to get more equitable consideration and treatment from the Compensation Board, whose assessments have borne so heavily on the lumbering and logging industry of the Province. He intimated that an interview would later in the day take place with Premier Veniot, and suggested that a resolution be adopted, setting out the views of the meeting as to what particular part of the difficulties the industry is encountering, should be brought to the attention of the Premier, as the time to deal efficiently with the whole question was limited.
